Public School Enrollment Projections, 2022-2031
August 2022 Publication No. 2022-001

This Public School Enrollment Projections report was produced by the Projections and State Data Center of the Maryland Department of Planning as a service to local governments and planning officials.

Foreword

This report, Public School Enrollment Projections, 2022-2031, is an update of the Maryland Department of Planning's annual report on public school enrollment statistics.

The report provides projections of public school enrollment through 2031 by grade for each of Maryland's jurisdictions (23 counties and Baltimore City). Statistics on actual total and public-school enrollment for 2011-2021 are also included.

The public school enrollment projections utilize the Maryland Department of Planning's population projections by age and sex for each jurisdiction. The population projections are used to derive school-age population (persons 5-17 years of age) and projected births. These projections are then used in conjunction with a "grade succession" methodology to derive the ten-year, grade-specific enrollment projections.

A preliminary set of enrollment projections and supporting materials documenting the projection methodology were sent previously to each School Superintendent and facility planner.

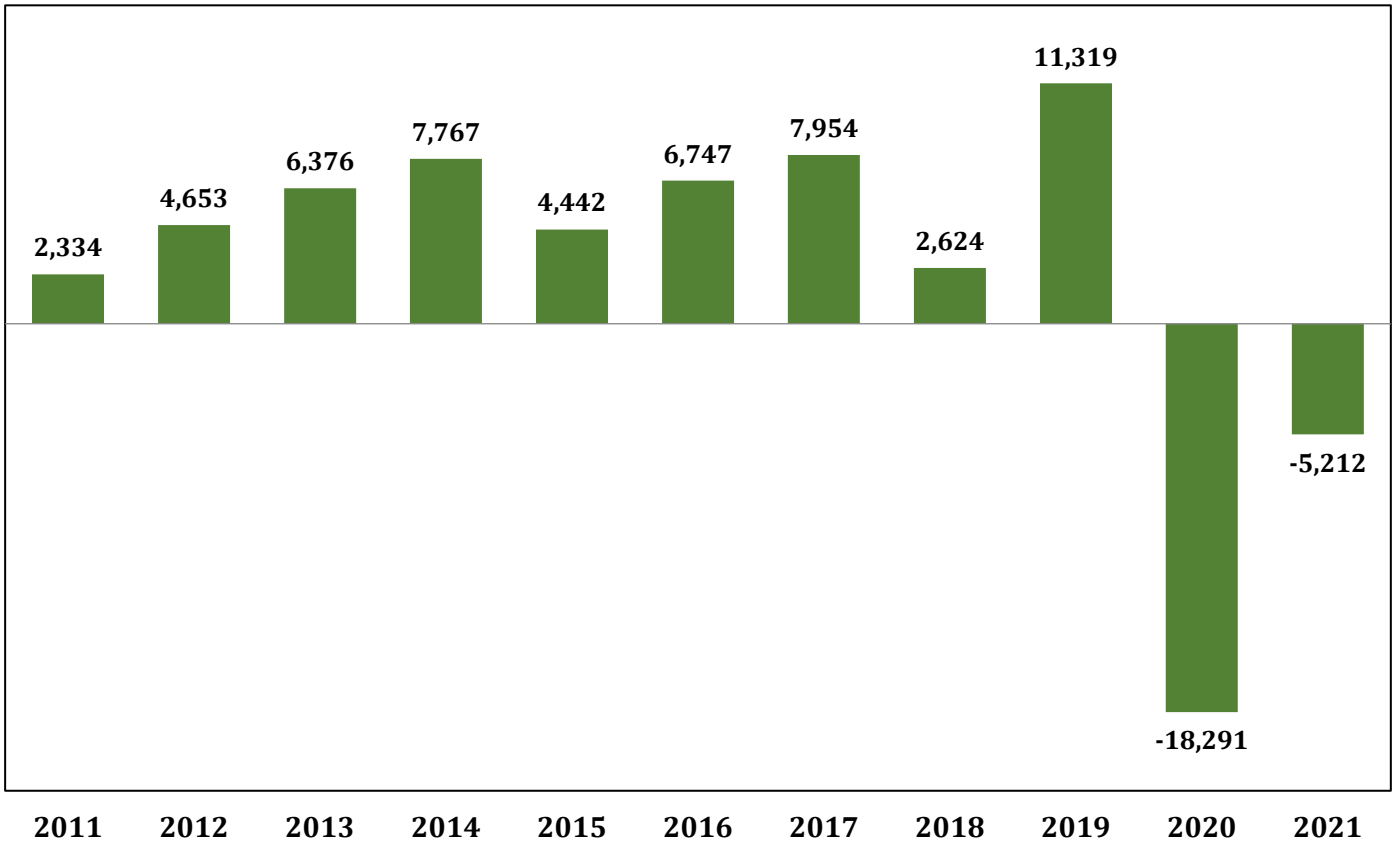
Executive Summary

Statewide Totals

Maryland's total public-school enrollment decreased in 2021 for the second consecutive year following eleven consecutive years of growth: a student decline of 5,212 (-0.6%), (See Chart 1). This decline was due to continued impacts associated with the COVID-19 pandemic and increased home-schooled students. Statewide, between 2011 and 2019, public-school enrollment grew by 51,882 or 6.3 percent. These gains are attributed mainly to the growth in population, increase in international migration, as well as recent increases in new housing construction. However, since 2019, enrollment has fallen by 23,503 students. Despite this decrease, enrollment remains higher than in 2011 by 28,379 students or 3.4 percent.

Chart 1 – Historical Annual Change in Total Public School Enrollment in Maryland, 2011-2021



* Grades K thru 12
Prepared by the Maryland Department of Planning

Maryland's 2021 public school enrollment of 853,307 is its lowest since 2015. Since 2000, public school enrollment peaked in 2003 at 847,722 and declined every year for the next five years until 2008 (816,963), those declines were due mostly to smaller cumulative birth cohorts[1] as well as strong domestic out-migration in the early and middle part of the 2000s that were not fully compensated for by gains from immigration. The recent decline in public school enrollment is mainly due to COVID-19 and increased home-schooling of students.

The Maryland Department of Planning (MDP) projects public school enrollment for the next 10 years. Growth is expected to occur from 2022 to 2024, this increase is due to the return of students following the COVID-19 pandemic and continued positive international migration. School enrollments are projected to decline in 2025 and 2026, this is mainly due to the lower births that occurred in 2020 and 2021, births in those two years were lower due to the pandemic. Moderate annual growth in public school enrollment is anticipated from 2027 to 2031 (see Chart 2). Total public-school enrollment in 2031 is projected to be 868,860 or 15,553 (1.8%) more than in 2021(See Table 1.). Total enrollments over the projection period peak in 2031, the last year of the projection horizon.

[1] Cumulative births are the sum of births for 13 consecutive years that would comprise the enrollment in the school system from K to 12th grade.

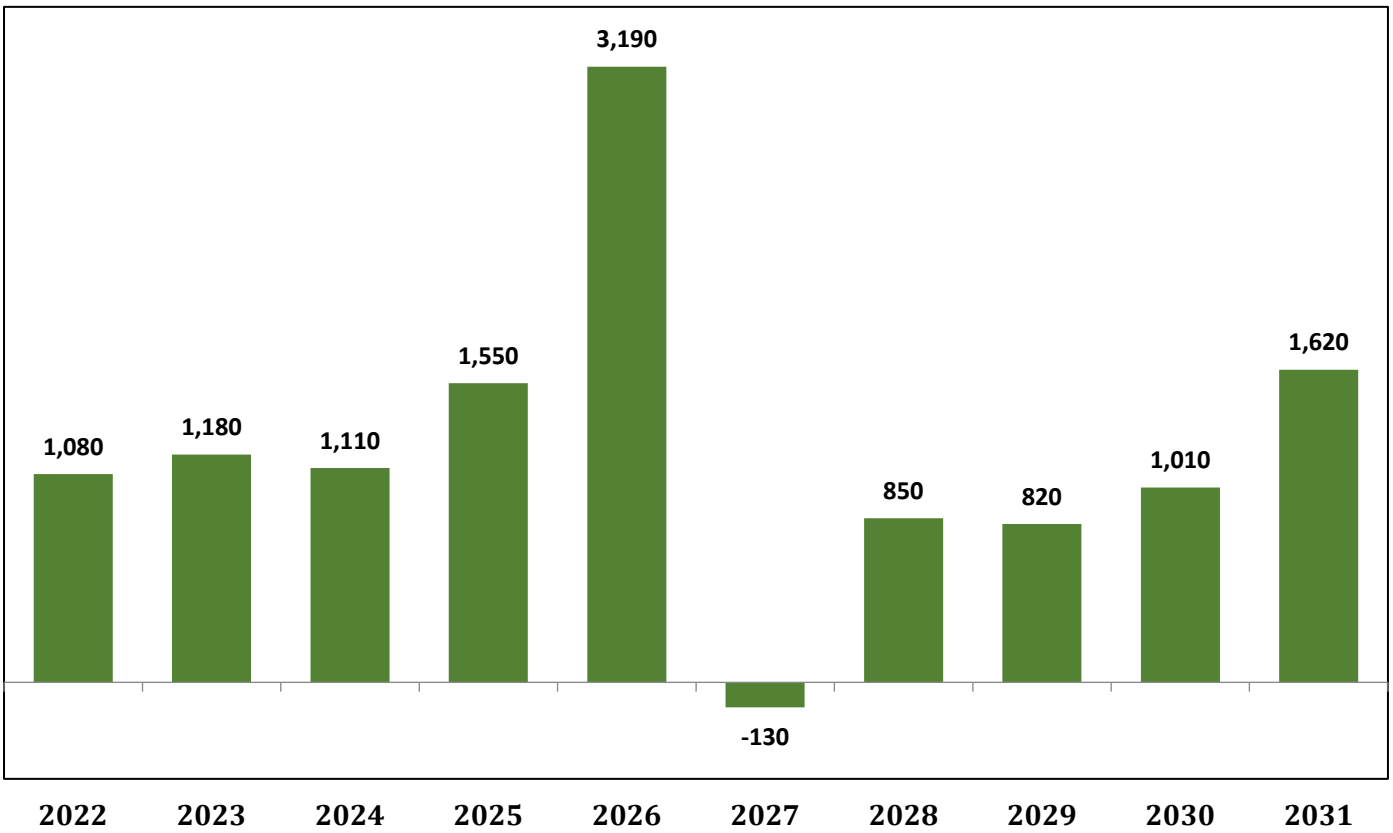
Enrollment numbers are rounded to nearest ten.

Projections (2022-2031) prepared by the Maryland Department of Planning.

Elementary school enrollment (grades K through 5) is projected to increase for all but one year during the projection period, increases for 2022 are due to the return of eligible kindergarten students following the COVID - 19 pandemic, the following years 2023 and 2024 show increases because of the births that occurred in 2018 and 2019. Enrollments in 2025 and 2026 are expected to increase with the highest yearly change during the projection period occurring in 2026 with an increase of 3,190. This is due to the projected increase in births following the COVID-19 pandemic. 2027 is the only year of the projection period with a decrease in elementary school enrollment. This is due to a reduction in births particularly during the COVID-19 pandemic. Growth resumes in 2028 and continues through 2031 (See Chart 3). For the next ten years, elementary school enrollment in public schools is projected to increase by 12,280 (3.2%).

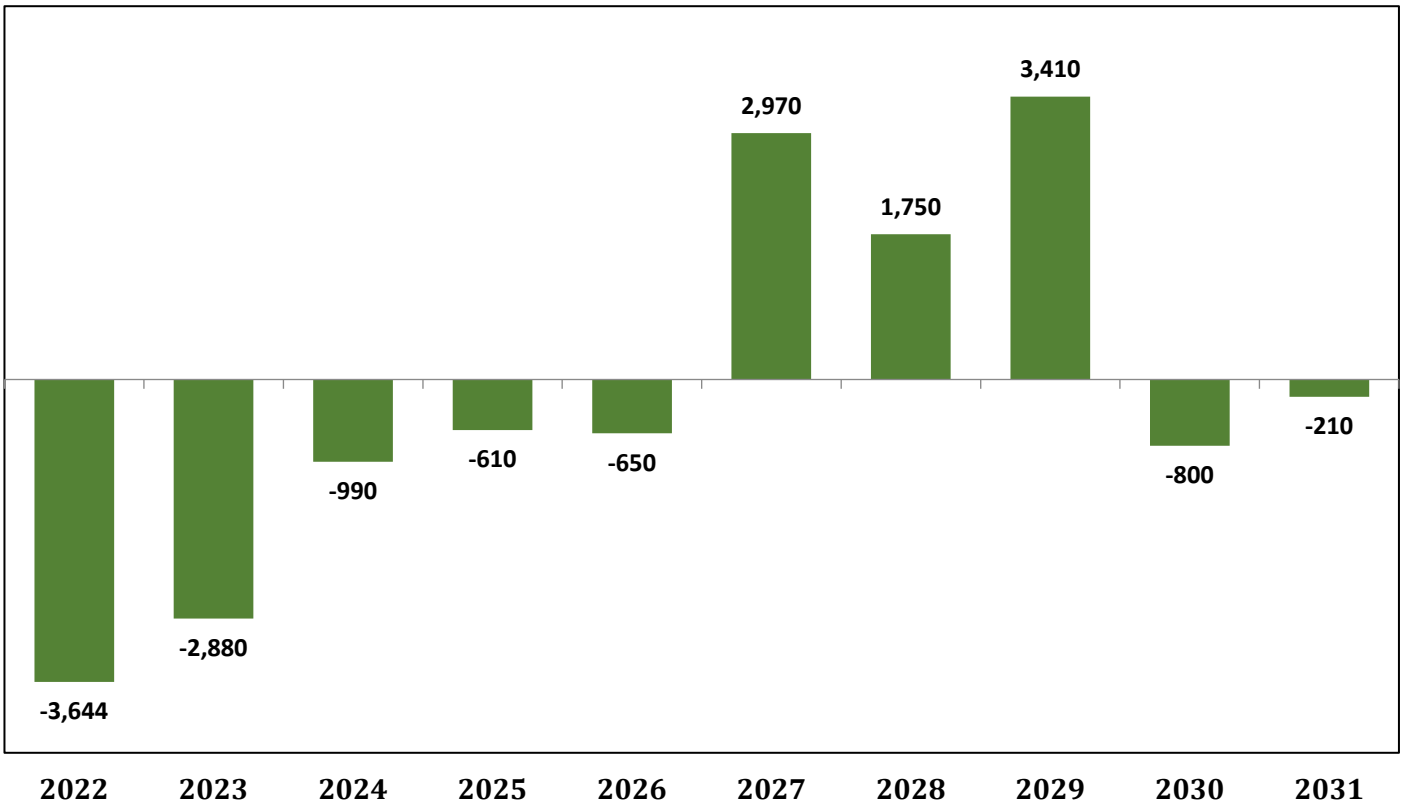
Chart 3- Projected Annual Change in Public Elementary School Enrollment in Maryland, 2022 – 2031 *



* Grades K thru 5
Source: Maryland Department of Planning

Middle school enrollment (grades 6 through 8) from 2021 to 2031 is projected to decrease by 1,654 (0.8%). A further analysis shows decline in the first five years of the projection period followed by strong growth from 2027-2029. Marginal declines are projected for the last two years of the forecasted period (See Chart 4). The main factor in lower projected enrollments is the decline in births, which is not only a trend in Maryland but nationally.

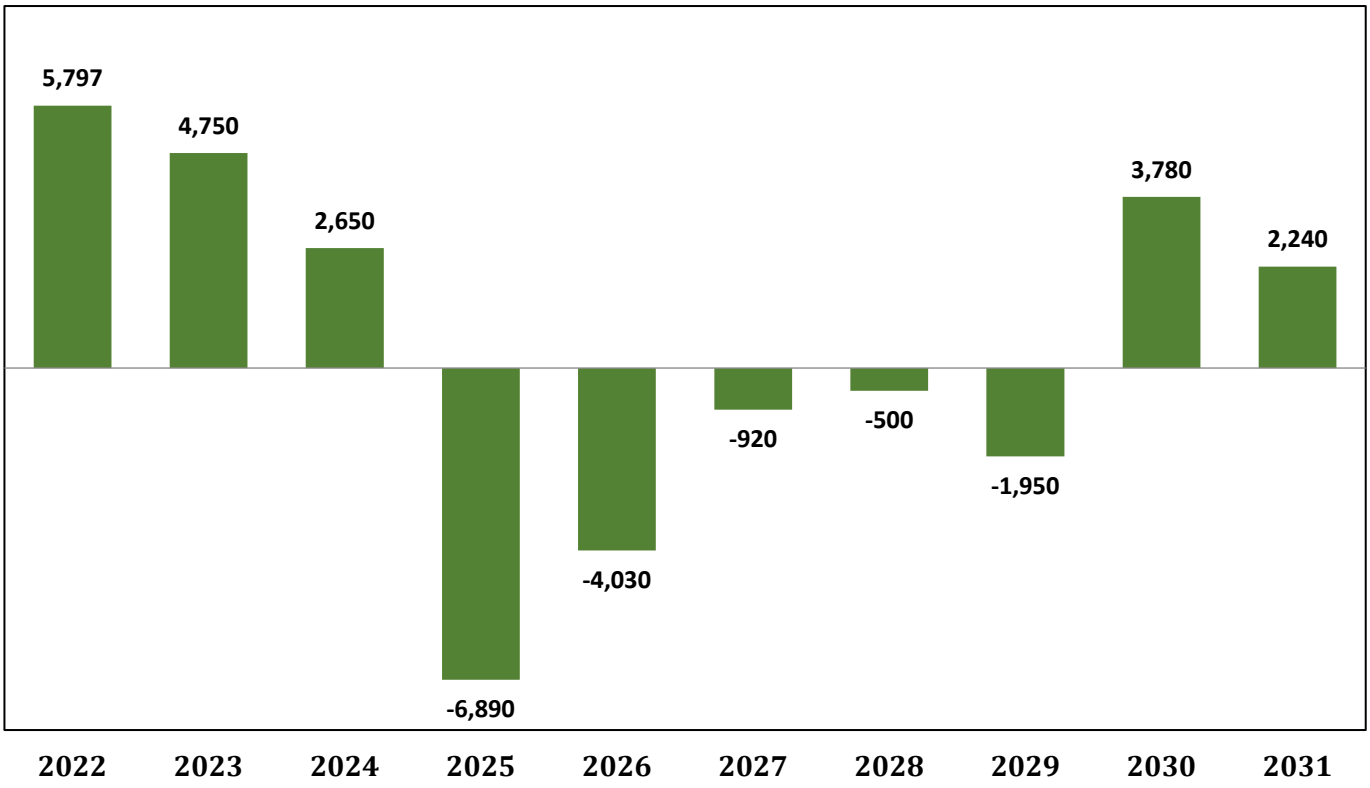
Chart 4- Projected Annual Change in Public Middle School Enrollment in Maryland, 2021-2030*



* Grades 6 thru 8
Source: Maryland Department of Planning

High school enrollment (grades 9 through 12) is projected to increase by 4,927 (1.8%) from 2021 to 2031, with peak enrollment occurring in 2024. Growth will be strongest from 2022 through 2024, with a small part of this increase due to the compulsory attendance law[2]. High school enrollments are projected to decline from 2025 to 2029. (See Chart 5.).

Chart 5- Projected Annual Change in Public High School Enrollment in Maryland, 2022-2031*



* Grades 9 thru 12
Source: Maryland Department of Planning

[2] Compulsory public school attendance from age 16 to age 17 in 2015 and to age 18 in 2016-2017 years, this policy change is described further in the Methodology section.

Jurisdiction Trends

Twenty of Maryland's 24 jurisdictions are expected to have larger total enrollments in 2031 compared to 2021. The largest numeric increases are anticipated for **Anne Arundel** (4,367), **Frederick** (3,785)**, Howard** (2,246), **Carroll** (2,035), and **Prince George's** (1,589) **counties**; the largest percentage increases are expected in **Somerset** (11.1%), **Frederick** (8.6%), **Carroll** (8.3%), **Charles** (5.6%) and **Anne Arundel** (5.4%) counties (See Table 2.)

Anne Arundel (2,915), **Prince George's** (2,721), **Baltimore** (1,645), **Frederick** (1,376) and **Charles** (976) **counties** are expected to have the five largest numeric increases in elementary enrollment by 2031. Three jurisdictions are expected to have lower elementary enrollment in 2031 than in 2021, with the largest decline in **Baltimore City** (-2,623, or -7.6%) followed by **Howard** (-316, or -1.3%), and **Allegany** (-21 or -0.6%) **counties.** The largest percentage increases for elementary school enrollment are expected in **Somerset** (23.4%), **Kent** (14.9%), and **Caroline** (10.4%).

Frederick (731), **Carroll** (691)**, and Howard** (691) counties are expected to have the largest middle school enrollment gains over the next 10 years. Thirteen jurisdictions are expected to have lower middle school enrollment in 2031 compared to 2021, with the largest declines projected for **Baltimore City** (-2,078), **Montgomery** (-1,136) **and Prince George's** (-942)

The largest percentage increases for middle school enrollment between 2021 and 2031 are anticipated for **Carroll** (12.1%)**, Frederick** (7.0%)**,** and **Queen Anne's** (6.9%) counties all reaching their peak enrollments in 2031, respectively. Middle school enrollments will have peaked in 10 of the 24 jurisdictions by 2022.

The five largest numeric increases in high school enrollment, over the projection period, are in **Howard** (1,871), **Montgomery** (1,788), **Frederick** (1,678), **Anne Arundel** (1,140), and **Harford** (463) counties. Most of the enrollment gains will occur in the early part of the projection period. In three of the jurisdictions with the largest increases, peak enrollment is projected to occur in 2024. **Howard** and **Frederick** are forecasted to peak in the final two years of the projection period.

The largest percentage increases in high school enrollment are projected for **Frederick** (11.9%)**, Howard** (10.2%)**, Carroll** (4.8%)**, Talbot** (4.6%)**, and Anne Arundel** (4.6%) **counties.** Twelve jurisdictions are projected to have a decline in high school enrollments in 2031 compared to their 2021 enrollments: **Baltimore City** (-860 or -3.8%), **Cecil** (-338 or -7.3%), **St. Mary's** (-332 or -6.2%), **Washington** (-267 or -3.9%), **Baltimore** (-220 or -0.6%), **Prince George's** (-190 or -0.5%), **Garrett** (-149 or -13.4%), **Allegany** (-142 or -5.9%), **Caroline** (-130 or -7.6%), **Queen Anne's** (-106 or -4.5%), **Kent** (-88 or -15.8%), and **Somerset** (-3 or -0.4%) counties.

Projections (2022-2031) prepared by the Maryland Department of Planning.

Long-Term Statewide Demographic Perspective

Over the last four decades, Maryland's public school enrollment for elementary, middle, and high schools has experienced both significant expansions and contractions. These patterns of growth and decline have been driven by the State's demographic changes: principally in the number of births and in the quantity and direction of net migration. Enrollments from 2019-2020 show a decline due to the COVID -19 pandemic, during this time home schooling enrollment increased substantially by (14,878 students) or 53.6 percent.

Chart 6 shows Maryland's historical and projected growth for total public school enrollment, from 1971 to 2031. The all-time high in Maryland public school enrollment occurred in 1971 with 919,782 students while 1985 marked a low in public school enrollment with 663,100 students. Student enrollments rebounded by 2019 with a gain of 213,710 or 32.2 percent over the 35-year period. Following modest declines between 2003 and 2008, enrollments increased from 2009 to 2019. As a result of the COVID-19 pandemic enrollments decreased in 2020 and 2021. There are several potential reasons for this decline one being the increased prevalence of home schooling, which increased by 14,878 enrollments or 53.6% from 2019-2020. Looking forward into the projection period enrollments are expected to rebound following the COVID-19 pandemic, increasing by an average of 3000 students from 2022 to 2024. Decreases in enrollment are expected in 2025 and 2026 due to sharp declines in cumulative births during this period. The remaining 5 years of the forecasted period from 2027 to 2031 show consistent increases ending with the second highest enrollment total in 50 years at 868,860 students.

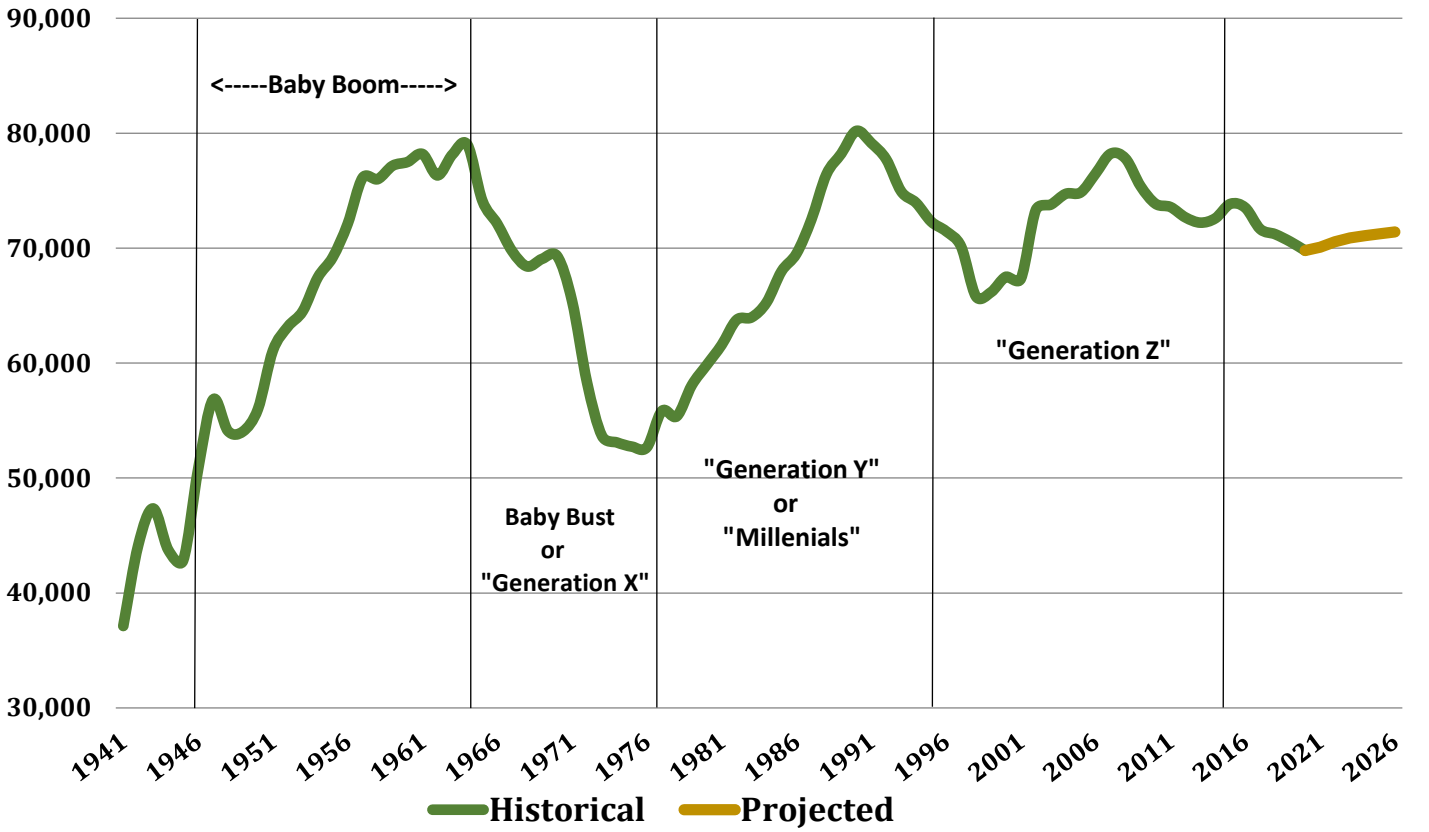
Births

Nationally, fertility rates have declined: **total births in 2020 were the lowest since 2001**. Maryland's births are projected to average around 70,700 per year over the 2020 to 2026 period. The number of births in Maryland began to decline after 1964, the peak year of the baby boom. The downward trend bottomed out in 1976. As births steadily increased, 1990 marked the new peak with 80,199 births. Echoing the Baby Boom, 1990 peak births (80,199) exceeded the 1964 peak (79,003) by almost 1200 newborns. (See Chart 7.) The difference in the total number of births between the 1976 low and the 1990 high is dramatic: 27,527 new births were recorded over a fourteen-year period, a 52.3% increase. Births declined from the 1990 peak to a low of 70,151 in 1997, a drop of just over 10,000, and then generally rose until peaking again in 2007 at just over 78,000. The total number of births began to decline once again in 2008 with the advent of the Great Recession. Between 2008 and 2013 there were nearly 5,600 fewer births followed by a slight uptick (+1,629) over the next two years. Relatively slow job growth since 2016 compounded by the Pandemic has resulted in decreased births and birth rates[4].

Chart 7- Total Births in Maryland, Historical and Projected, 1941 – 2026

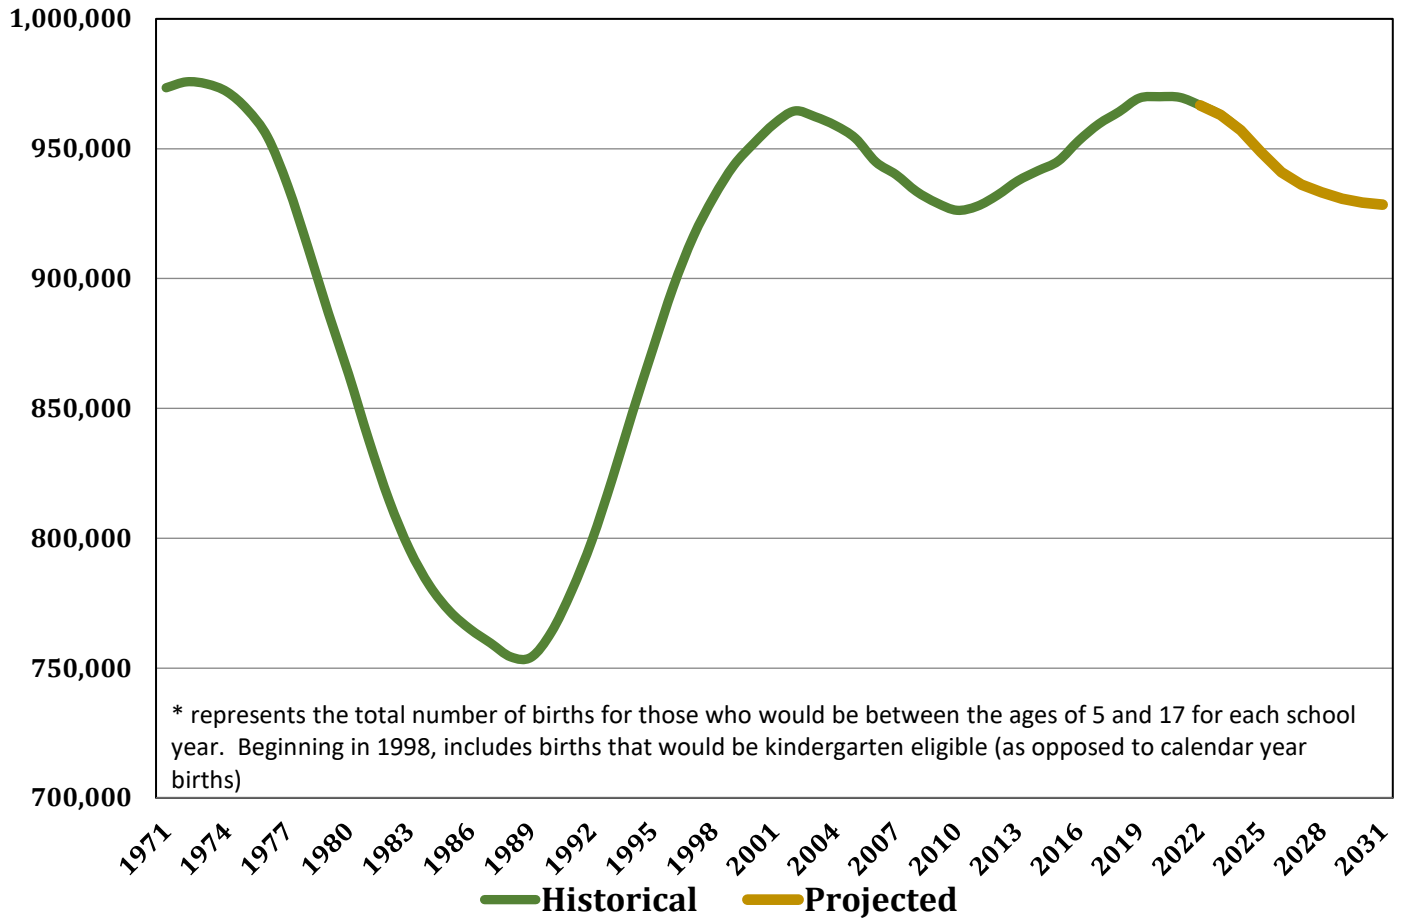


Source: Maryland Department of Health (historical) and Maryland Department of Planning (projections)

[4] Economic downturns and periods of economic uncertainty tend to reduce overall fertility rates.

More important than births in any one year, is the cumulative number of births over a 13-year period that constitute the potential enrollment pool for grades K through 12 for a specific school year. Cumulative births by year (those who are roughly between the ages of 5 and 17 for any given school year) reached a low point in 1989 at just under 754,200 and later peaked at 972,400 in 2005 (a difference of over 218,000) (See Chart 8). Cumulative birth totals declined by nearly 21,100 between 2005 and 2010 but began to grow again in 2011. Cumulative births are projected to decline from 2021 to 2031 with cumulative births totaling 928,449 in 2031 (See Chart 9).[5] These decreases in cumulative births in the initial part of the projection years correspond directly with slightly lower enrollment projections in middle part of the projection period.

Chart 8- Cumulative Births by School Year in Maryland Historical & Projected, 1971 – 2031 *



* represents the total number of births for those who would be between the ages of 5 and 17 for each school year. Beginning in 1998, includes births that would be kindergarten eligible (as opposed to calendar year births)

Source: Maryland Department of Health (historical) and the Maryland Department of Planning (projections)

[5] All cumulative birth totals have been adjusted to account for the changing kindergarten age eligibility requirements that were phased in between 2003 and 2006.

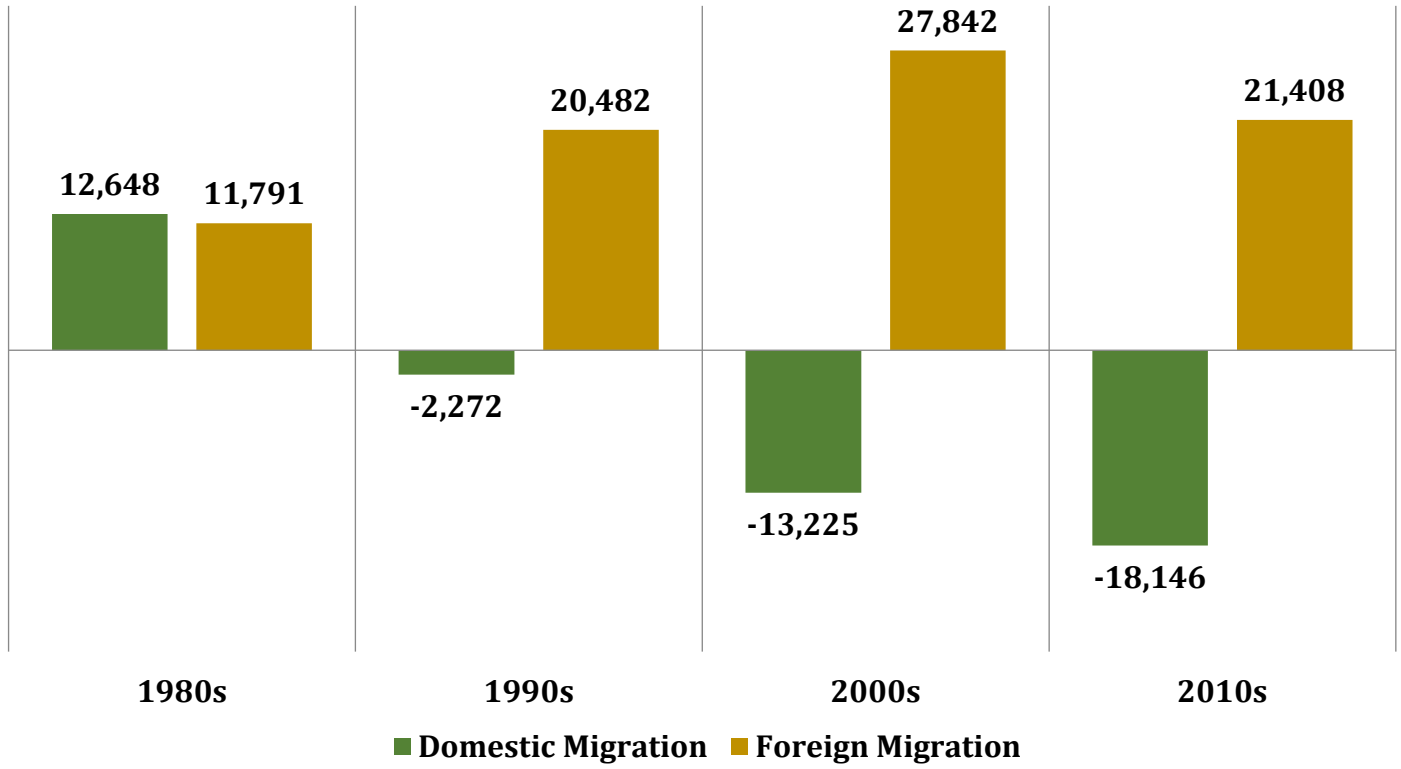
Domestic Migration and International Migration

The potential number of students enrolled is directly related to resident recorded births (i.e., births associated with female residents in Maryland.). The number of resident-recorded births may either decrease or increase depending on net migration. Net migration is the difference between the inflows and outflows of domestic migration plus the gains from immigration.

Net migration has fluctuated markedly over the last couple of decades impacting the number of school-age kids through the gain or loss of young adults that would eventually have school-age kids. Chart 10 below illustrates the estimated average annual net domestic migration and immigration over the last three plus decades. For much of the 1980s, Maryland was one of the stronger economies in the country with population gains (averaging over 12,600 per year) from net domestic in-migration. In the 1990s and the 2000s, domestic out migration had increased: with the average outflow in the 2000s (-13,255) about five-times greater than in the 1990s (-2,272). The trend in domestic out-migration continues post-2010, from 2010 to 2020, annual domestic migration averaged -18,146.

Chart 10- Average Annual Net Domestic Migration and Immigration into Maryland



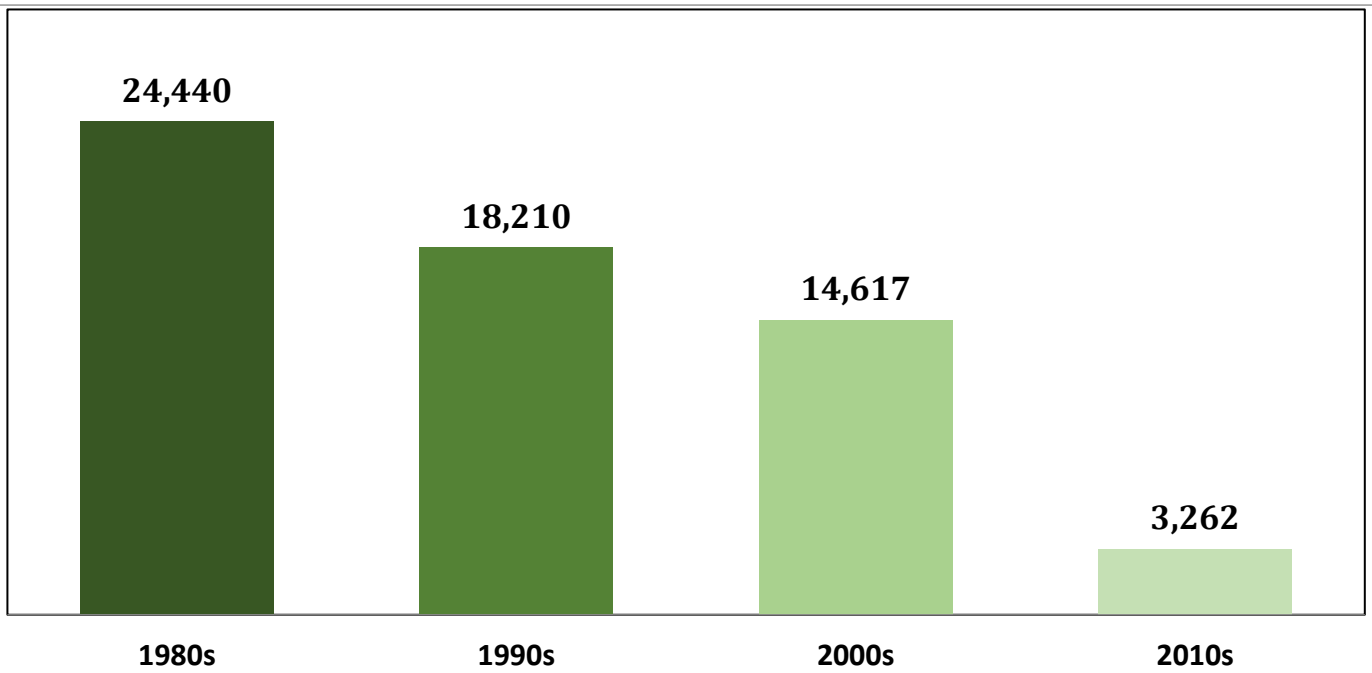
Foreign-Born data is from the decennial census (1980s and 1990s) and from the American Community Survey (2000s and 2010s). Domestic migration is calculated as a residual for the 1980s, 1990s and 2000s; from 2010 forward this data has come fom the Census Bureau's components of population change, part of the Annual Population Estimates for the April 1, 2010 to July 1, 2020 period.

Net out-migration in the 2000s was due in part to the effects of the expanding "housing bubble" that developed in the middle part of the decade. As prices began to rise at a rapid rate, Maryland saw an increasing number of its residents move to border states (particularly Pennsylvania) where housing costs were lower. However, the collapse of the housing price bubble, along with job losses in every part of the country, curtailed out migration. Maryland's overall net domestic out migration decreased dramatically after 2008, this led to larger overall population gains for Maryland. Net domestic outmigration, however, did begin to recover over the last five years as job and housing markets improved nationally.

While Maryland's net domestic migration fluctuated over the last few decades, immigration steadily increased. The average annual gain in the 2000s of just over 27,800 residents per year was more than double the average gain over the 1980s and 36 percent greater than in the 1990s. The annual estimates for the decade through July 1, 2020 (21,408) are a bit lower than in the 2000s. Estimates from July 1, 2020 to July 1, 2021 show that international migration (6,838) for Maryland has been the lowest since 2000. States across the country have reported lower international migration numbers due to the COVID-19 pandemic. Nationally, migration has decreased an estimated 48.7 percent from July 1, 2020 to July 1, 2021.

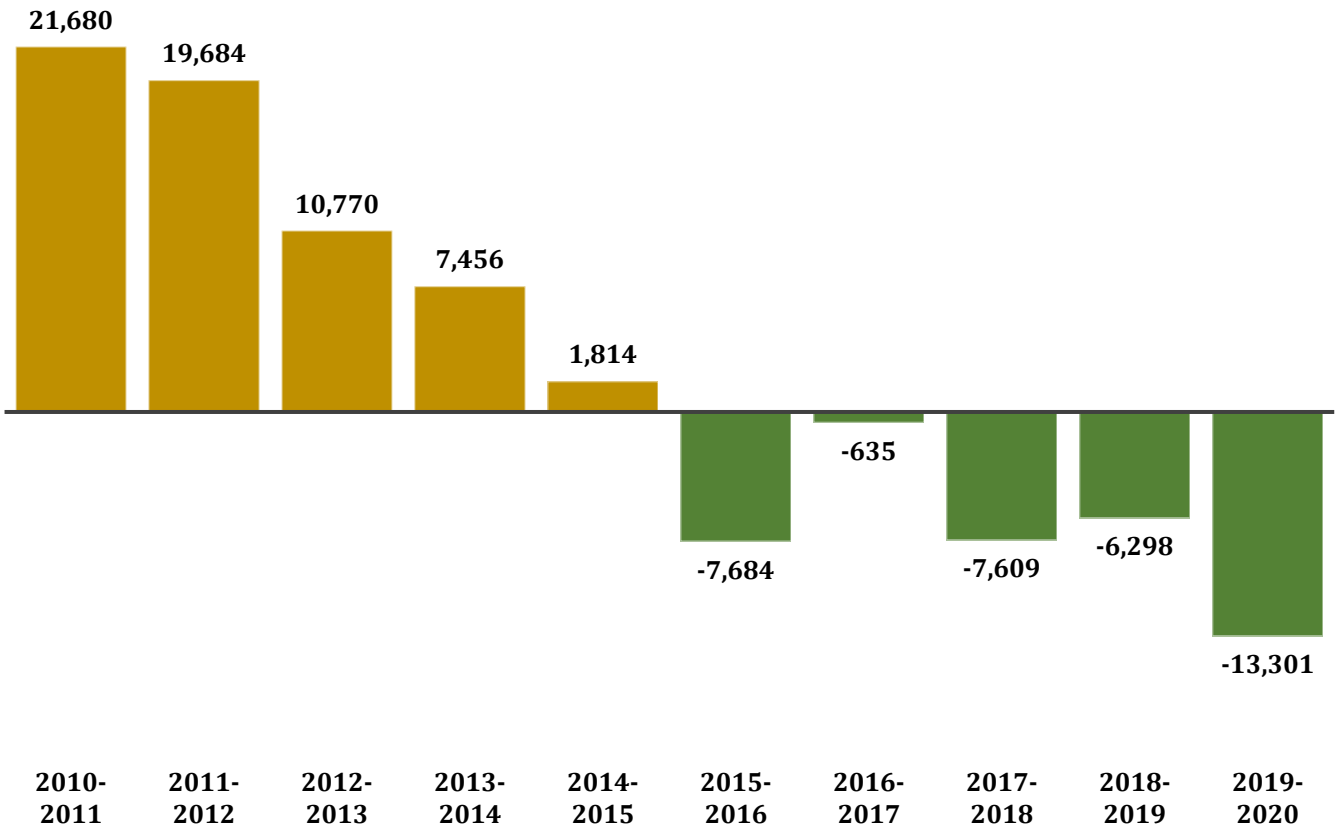
Despite a large increase in foreign migration in the 2000s, Maryland experienced larger net domestic out-migration. Therefore, total annual migration (domestic and foreign) gains in the 2000s of just over 14,600 per year was well below the total gains of the 1990s and 1980s (See Chart 11.) Continued strong gains from immigration along with reduced domestic out-migration in the first half of the decade yielded an increase in total net migration of about 61,404. Despite positive net migration in the first half of the decade, the final five consecutive years show negative net migration totaling -35,527 (See Chart 12). The total net migration from April 1, 2010 to July 1, 2020 was an increase of 33,437.

Chart 11- Average Total Net Migration for Maryland by Decade



Based on the Decennial Census (1980, 1990), the American Community Survey (2000s) and birth and death data from administrative records, total migration is calculated as a residual. For years 2010 and forward, total migration statistics come from the components of population change which are reported in the Census Bureau's Annual Population Estimates.

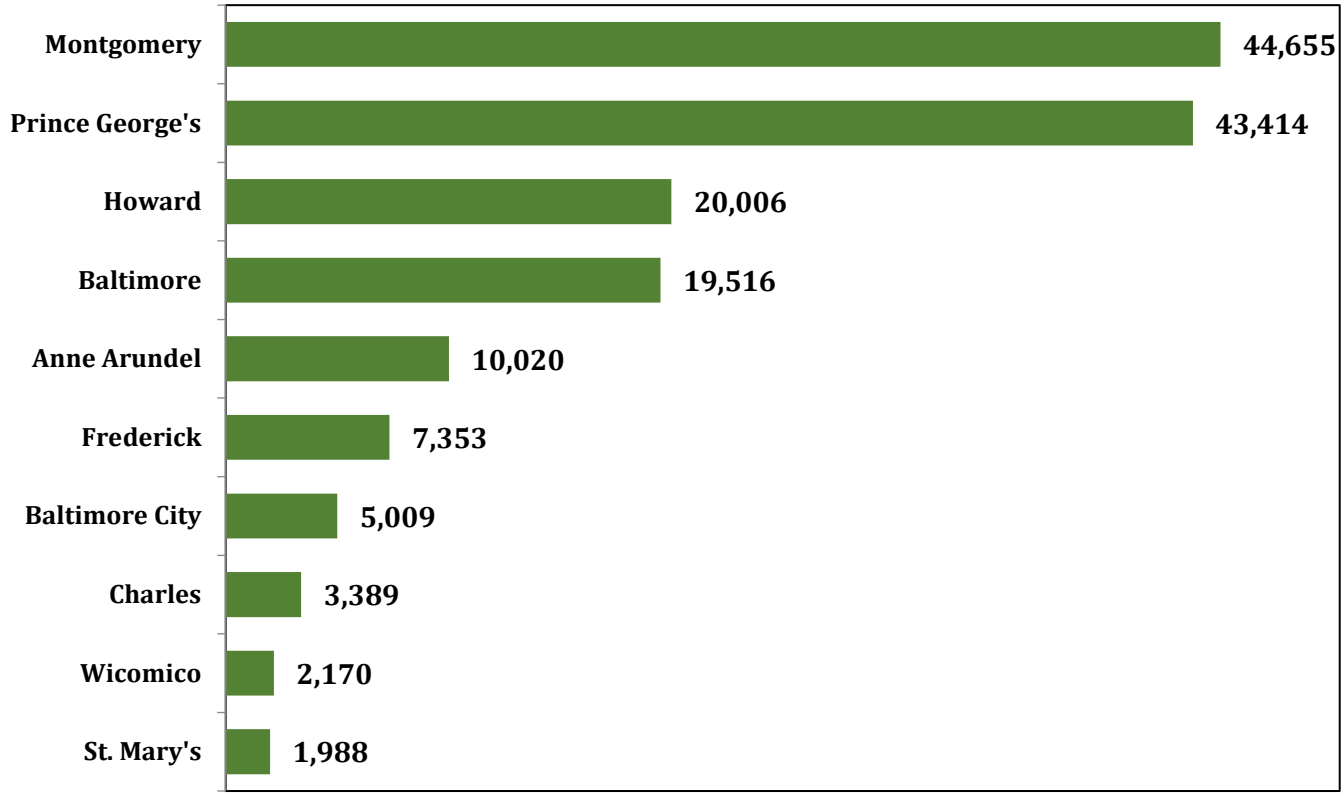
Chart 12- Maryland Net Migration Estimates July 1, 2011- July 1, 2021



SOURCE: U. S. Bureau of the Census, Population Division, December 2021

Immigrants (foreign born) have been an important source of population growth statewide since 2000. The increase in the foreign born, between 2010 and 2020, represents 41.0 percent of the growth in the state's population. The foreign born are a significant component of overall population growth for several of Maryland's jurisdictions: 44,655 in **Montgomery County,** 43,414 in **Prince George's County**, and 20,006 in **Howard County** (See Chart 13).

Chart 13. Counties with The Largest Increase in Foreign Born Population, 2010 – 2020



Source: American Community Survey, 5-year Estimates data

From a statewide perspective, losses in domestic migration and gains from immigration have been an important factor in increased minority enrollment. The largest gains in public school enrollment from 2010 to 2021 were among Hispanic (77,860) and Multi Race (13,816) students, while non-Hispanic white enrollment declined significantly (See Charts 14 and 15). The share of non-Hispanic white students enrolled in Maryland public schools declined from 42.9 percent of total enrollment in 2010 to 34.2 percent in 2021. African American student enrollment declined by 24,122 from 2010 (35.8%) to 2021 (33.0%). In the same period, 2010 to 2021, the Hispanic share of public-school enrollment rose from 11.5 percent to 20.7 percent. (See Chart 16.)

Intra-State Migration

Immigration has been an important source of population growth for the inner suburban counties (Montgomery, Prince George's, and Baltimore) since the 1990s while intra-state migration, the movement of people from one Maryland county to another, has been a key element in the growth of many outer suburban and rural counties. The pattern of intra-state migration flows has typically been from the inner suburban counties to contiguous outer suburban counties and from outer suburban counties to more rural counties. For example, out migration from **Montgomery** and **Prince George's counties** increased total population and school enrollment in many outer suburban jurisdictions including **Calvert**, **Charles**, **Frederick,** and **Howard counties**. During the middle part of the 2000 to 2010 period there was a third wave of suburbanization into exurban counties. During the middle part of the 2000 to 2010 period there was a wave of suburbanization into exurban counties: increasing population gains from intra-state migration were realized by **Washington County** (primarily from **Frederick** and **Montgomery counties**) and **Cecil County** (primarily from **Harford County**). These movements substantially slowed with the collapse of the housing bubble in the latter part of that decade and have not resumed to any great extent. The last ten years, from 2010 to 2020, witnessed more people leaving the state's urban core counties (Baltimore region and Suburban Washington DC); population gains from intra-state migration from these regions, during this period, were primarily found in the Southern Maryland Region. Between 2010 and 2020 the Southern Maryland Region (Calvert, Charles, and St. Mary's counties) grew by 9.3 percent, the largest of any region during that time.

Home Schooling Enrollment

The COVID-19 pandemic impacted many key components of school enrollment throughout the country. In Maryland one of the changes that is harder to quantify is projecting the share of eligible students electing to be home schooled. Accurately forecasting the home-schooling enrollment numbers and its impacts on public school enrollment moving forward may need to be assessed considering evolving social trends and the lack of comprehensive data resources. The available home school data, starting in 2010 and current as of 2019, shows relatively consistent enrollment totals averaging 25,434 students with an average change of 1.1 percent for that period[6]. Home schooling enrollments increased significantly in 2020 with 42,632 students, an increase of 14,804 or 53.2 percent from its previous peak in 2016. The growth from 2019-2020 of 14,878 students or 53.6 percent is nearly seven times the previous peak year-over-year change of 2,132 between 2012 and 2013.

Over the last decade home schooling enrollments have made up nearly 3% of all enrollments. However, as a consequence of the COVID-19 pandemic, the number of home-schooled students increased (14,878) and now make up 4.2 percent of total enrollments in Maryland. Though it may be a small portion of the total enrollments, it may help to explain the sizable decreases seen in public school enrollment following the pandemic.

Public/Private Enrollment Share

In addition to the number of births, domestic migration, immigration, and home-schooling enrollment, another important factor in determining public school enrollment is the percentage of all students that attend public versus private schools. Unfortunately, data on K through 12 private school enrollments for the last ten school years (2010 – 2020) are not directly comparable to prior years or even to each other and thus it is not possible to establish an historical trend through the current school year. This is because the Maryland State Department of Education, which generates the non-public school enrollment data, switched to an online survey of private schools in 2008 (from a mail-out/mail-back survey) resulting in a much lower response rate than in prior years. Moreover, participation in the survey is voluntary and not subject to a thorough verification and audit process.

The data show that K-12 private school enrollment "dropped" from 131,441 in 2007 to 104,030 in 2008, the first year of the online survey. This pushed the overall public school share of total enrollment (public plus private) to 88.7 percent, a jump of 2.5 percentage points from 2007, and the highest on record to date. (See in Appendix A-3, Percent of School Enrollment in Public Schools, 2008-2018.) Prior to 2008, the highest public share on record over the last couple of decades was 87.2 percent in 1991. Data since 2008 indicate that private school enrollment rose to 109,924 in 2010 and then declined by a total of 7,509 (-6.8%) in the eleven succeeding years, falling to 101,364 by 2021. As a result, the public share of total enrollment has increased from 88.2 percent in 2010 to 89.4 percent in 2021.

It is reasonable to assume that private school enrollment dropped in 2008 (and that the public share increased) due to economic hardships brought about by the Great Recession; it is, however, nearly impossible to verify the magnitude of that drop. Private school enrollment declined between 2010 and 2021 because of administrative changes.[7] The magnitude of the 2010-2021 decline in private school enrollment is difficult to verify due to changes in enrollment submission policy during this time, looking closer at the year over year change we see that in 2018 and 2019 private school enrollment increased with the largest increase coming in 2019 at 7 percent or 6,551 new enrollments. In 2021 a slight decrease was seen falling 1,051 students or 1 percent.

[6] MSDE, Home schooling 14-year report

[7] A factor in the decline of private school enrollment is the closing of 13 parochial schools by the Catholic Archdiocese of Baltimore, effective with the school year starting in September 2010. Ten of these schools were in **Baltimore City** and three in **Baltimore County** with a total of 2,152 students. Affected students were offered a guaranteed spot in a school no more than five miles from their current school.

Trends and Projections in Public School Enrollment by Type

The Maryland Department of Planning's statewide and jurisdiction population and birth projections form the basis for the projected school enrollment. Growth in total enrollment is anticipated in the next three years, followed by two years of decline before continued growth through the remaining projection period (2027 through 2031).

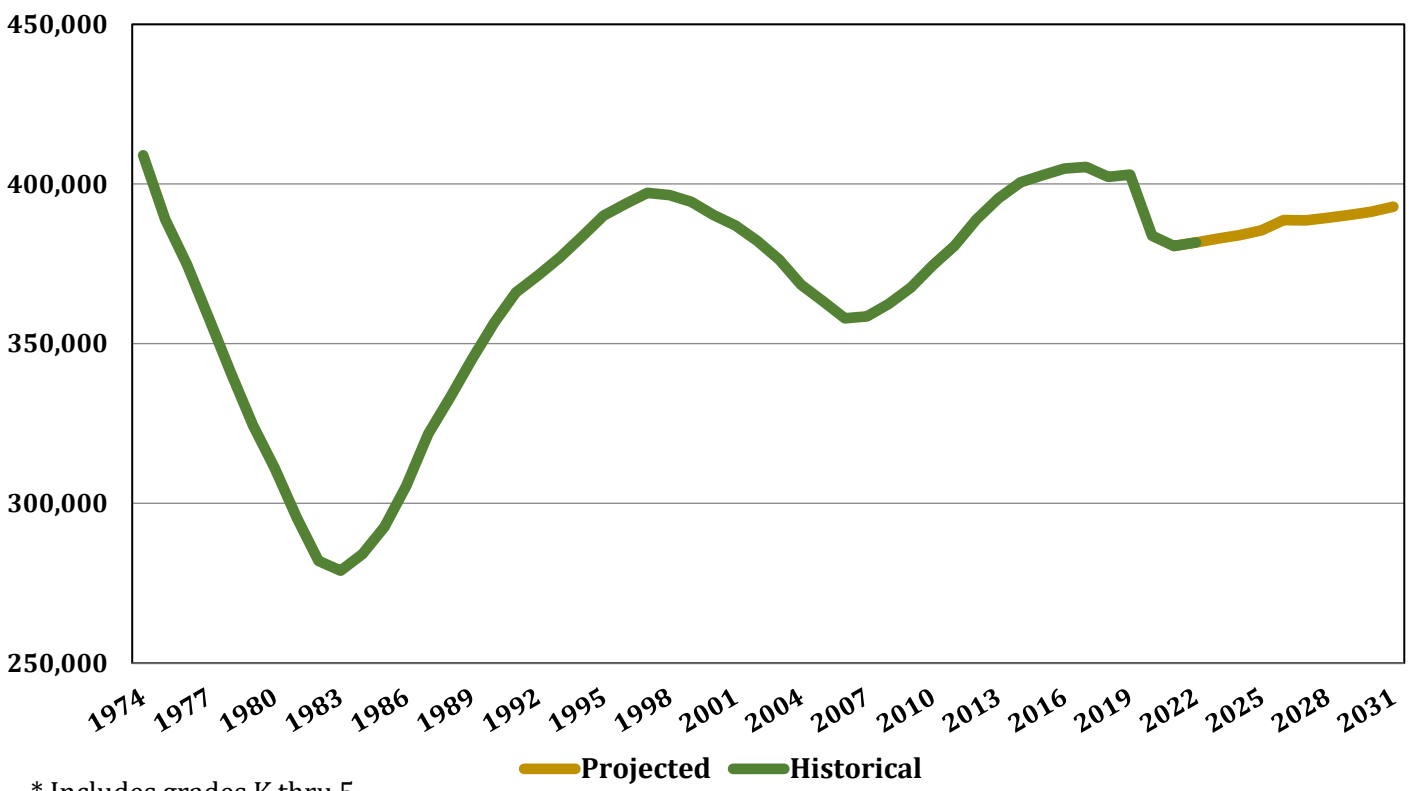
Total Public-School Enrollment

Public school enrollment is expected to experience an average annual increase of approximately 3,018 from 2022 to 2024 and a reduction of 3,720 from 2025 to 2026, it is projected to increase an average of 2,788 students for 2027 through 2031. The main driver of annual enrollment during the projection period is the change in cumulative births, i.e., the sum of births over successive 13-year periods that correspond to individual K-12 enrollment years. There is a small increase in cumulative births in the initial part of the projection period (2019 to 2020), but the subsequent declines start to increase in the later part of the projection period (2024 to 2026). From 2021 to 2029, cumulative births are projected to decrease about 3,700 per year. Lower cumulative births would result in decreased school enrollments 2025 to 2026.

Public Elementary School Enrollment (grades K through 5)

Public elementary school enrollment (grades K-5) dropped by nearly 163,300 students (- 36.9%) between 1972 and 1983, the low point over the past several decades. (See Chart 16.) This decline in elementary school enrollment is explained by the transition from the youngest baby boomers (baby boomers are those born between 1946 and 1964) to Generation X (those born in a period of declining births, 1965-1982). The Gen X generation was followed, in turn, by the larger baby "boomlet" (sometimes called "Generation Y," "baby-boom echo" or more recently and perhaps finally "millennials") resulting in a 118,300 (42.4%) increase in elementary enrollment from 1983 to 1997. Lower numbers of births after the peak in 1990 resulted in a decline in elementary school enrollment from 1998 through 2006 of nearly -39,300 (-9.9%) yielding a total enrollment of just under 358,000. Elementary enrollment began to grow again in 2007 and averaged 4,700 new students each year from 2007 to 2017, with the gain in 2012 (8,291) the largest in the state since 1991.

Chart 17- Public Elementary School Enrollment in Maryland, Historical and Projected, 1974 – 2031*



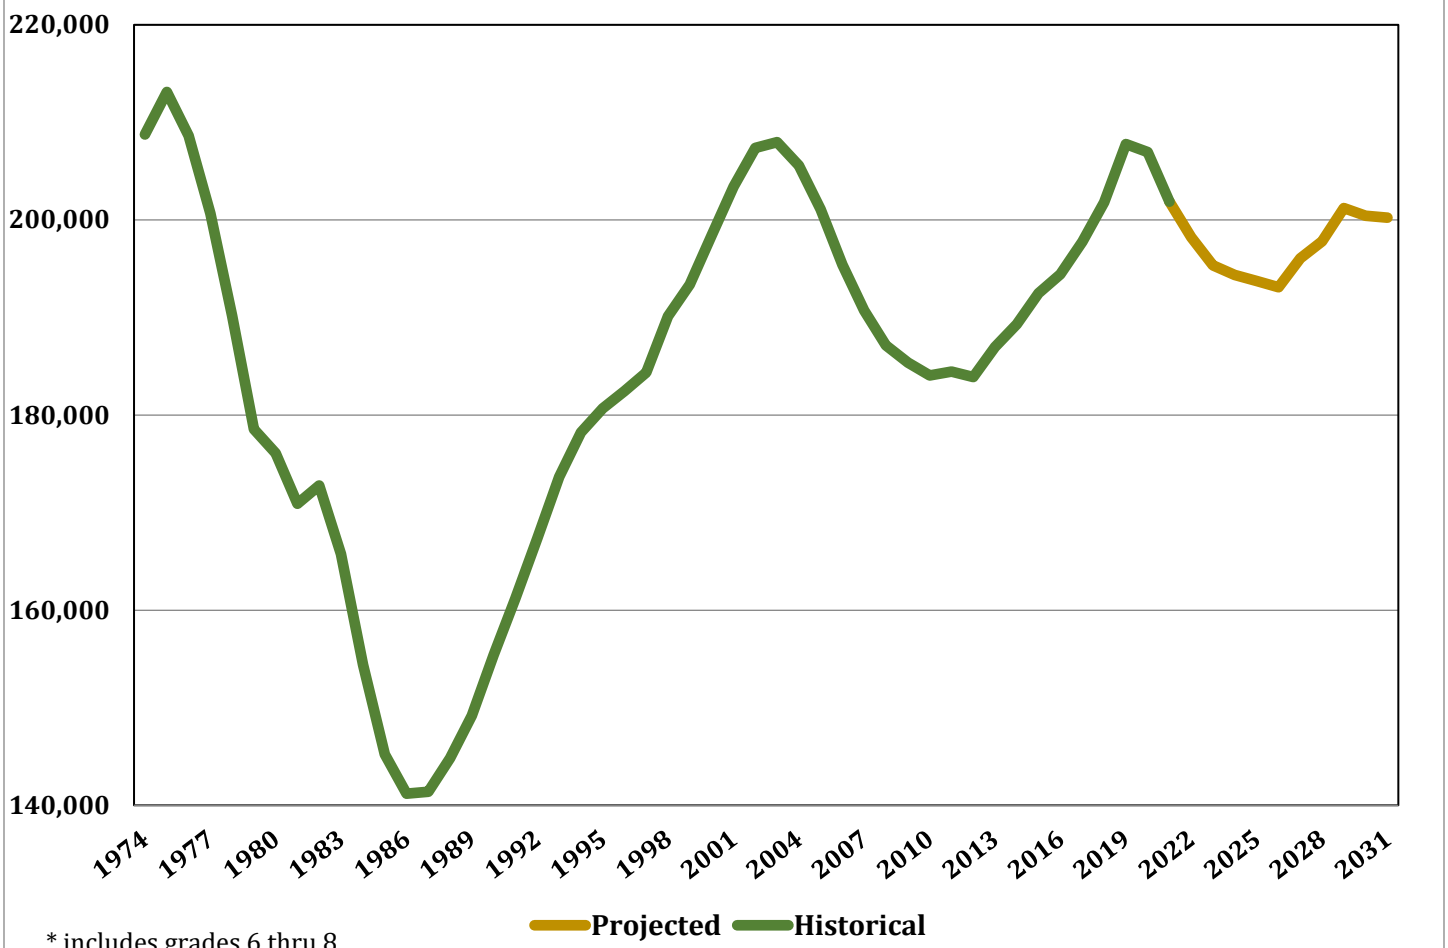
* Includes grades K thru 5

Elementary school enrollment in 2012 was the highest year over year increase in two decades, the following years saw slowed growth eventually turning negative in 2018, for the first decline in more than a decade. The decrease (-19,123) in 2020 was the largest since 1975 (-20,120). Following the largest decline in over four decades, 2021 enrollment has decreased by 3,152 students. Enrollments in elementary schools are projected to increase in 2022, the decreases in 2020 and 2021 are mainly due to the COVID-19 pandemic. Elementary school enrollments are projected to continue to grow marginally through 2026, decline in 2027 and turn positive for the remainder of the projection period (See Chart 3 in the Executive Summary). The COVID -19 pandemic, birth patterns, as well as changing "K to birth" and "first grade to birth" ratios (see methodology section) all play a part in this slow growth pattern. At the end of this pattern of gain-loss-gain, over the next several years, elementary school enrollment in 2031 is projected to be 397,800, or about 12,280 (3.2%) above 2021.

Public Middle School Enrollment (grades 6 through 8)

Changes in public middle school (grades 6-8) enrollment follow elementary school enrollment patterns with only the age of the students accounting for the staggered trough and peak (See Chart 18). From 1975 to its low point in 1986, public middle school enrollment fell by nearly 72,000 students (-33.7%) driven by the same demographic trends as described for elementary school students. Middle school enrollment grew steadily between 1987 and 2003, peaking at just under 208,000 students in 2003, for a gain of 66,800 students or 47.3 percent. Statewide, middle school enrollment declined by nearly 24,100 (-11.6%) between 2004 and 2012 with only a small gain in 2011 (391) interrupting annual losses in the 2004 to 2012 period.

Chart 18- Public Middle School Enrollment in Maryland, Historical and Projected, 1974 – 2031*



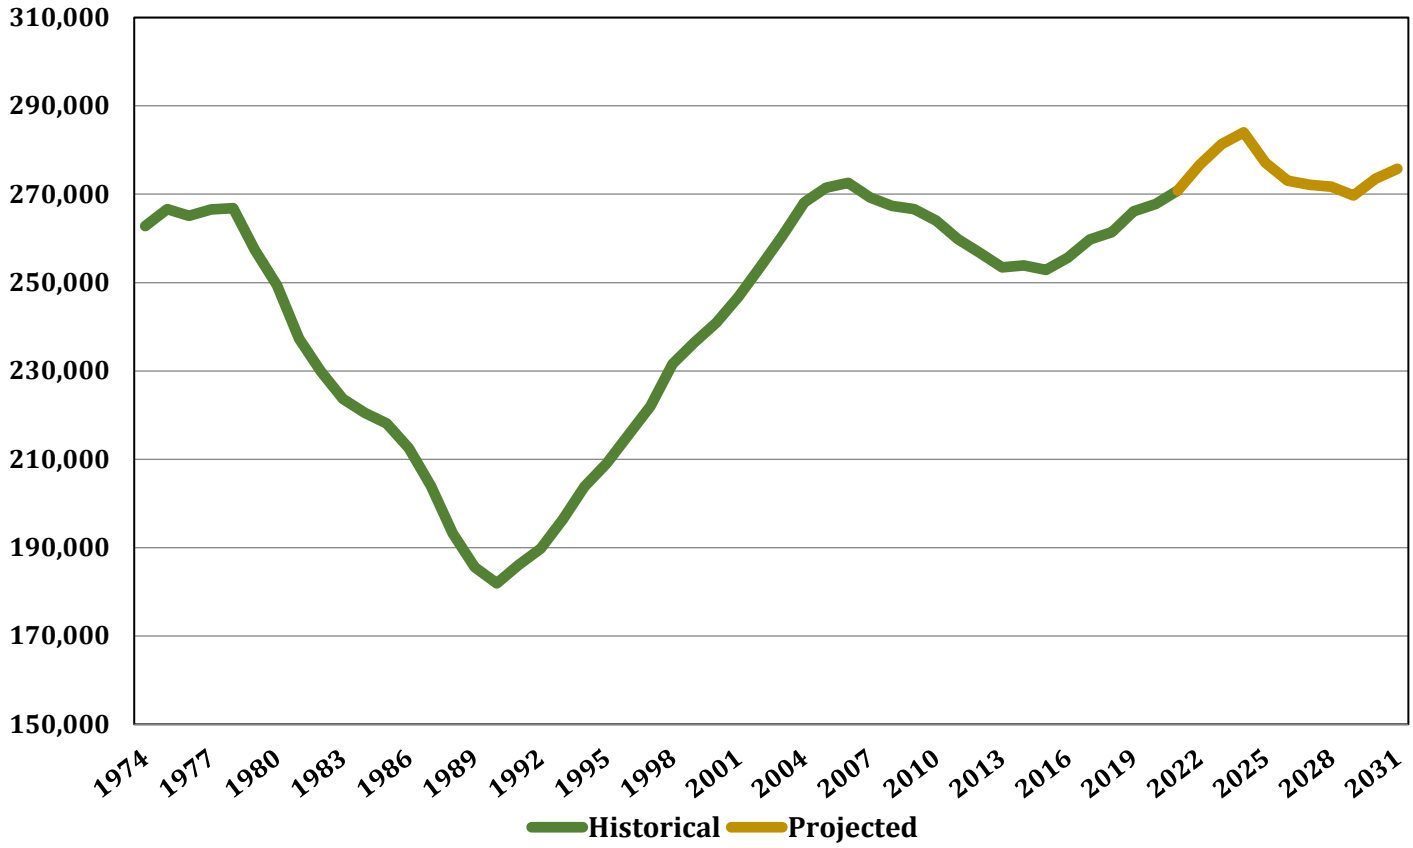
* includes grades 6 thru 8
Source: Maryland State Department of Education (historical) and the Maryland Department of Planning (projections)

Sustained annual middle school enrollment gains returned in 2013 (3,069) and continued every year, until 2020 following years are projected to continue this enrollment reduction pattern until 2026. Middle school enrollments are expected to increase from 2027-2029. Increases in elementary school enrollment, which started in 2007, begin to make their presence felt at the middle school level, averaging a 1.4 percent gain in enrollment between 2027 and 2029 (See Chart 4). Following the 2029 projection period high, enrolments are expected to decrease slightly through the remaining 2 years.

Public High School Enrollment (grades 9 through 12)

Growth in public high school enrollment (grades 9-12) is anticipated to follow the same peak-to-trough-to-peak cycle as elementary and middle school enrollments but with a shift to the right; high school enrollments are also boosted by the two-step increase in age of compulsory attendance[8]. (See Chart 19.) Public high school enrollment peaked in 1978 at 266,850 students with the tail end of the baby boom generation, and then declined by nearly 85,000 students (-31.8%) through 1990. Steady growth in high school enrollment continued all through the 1990s and mid-2000s, reaching a new peak in 2006 with 272,575 students, a nearly 90,700 (49.8%) gain from the low point in 1990. Public high school enrollment declined in 2007 and continued to drop through 2015 despite a slight uptick in 2014 (447). Enrollment fell by almost 19,700 or (-7.2%) students from 2007 to 2015. Since 2015, student enrollments have increased every year through 2021.

Chart 19- Public High School Enrollment in Maryland, Historical and Projected, 1974 - 2031



* includes grades 9 thru 12

Total public high school enrollment will grow significantly in the first three years of the projection period to 284,010 (4.9%) above 2021 levels in 2024. After the projected all-time high enrollment of 2024 enrollment is anticipated to decrease from 2025 to 2029 by an average of 1 percent annually. The final 2 years of the projection period through 2031, provide an average annual increase of 3,010 enrollments or 1.1 percent. Public high school enrollment is projected to remain above the historical peak of 2006 in all but 3 years of the 10 year projection period (See Chart 5).

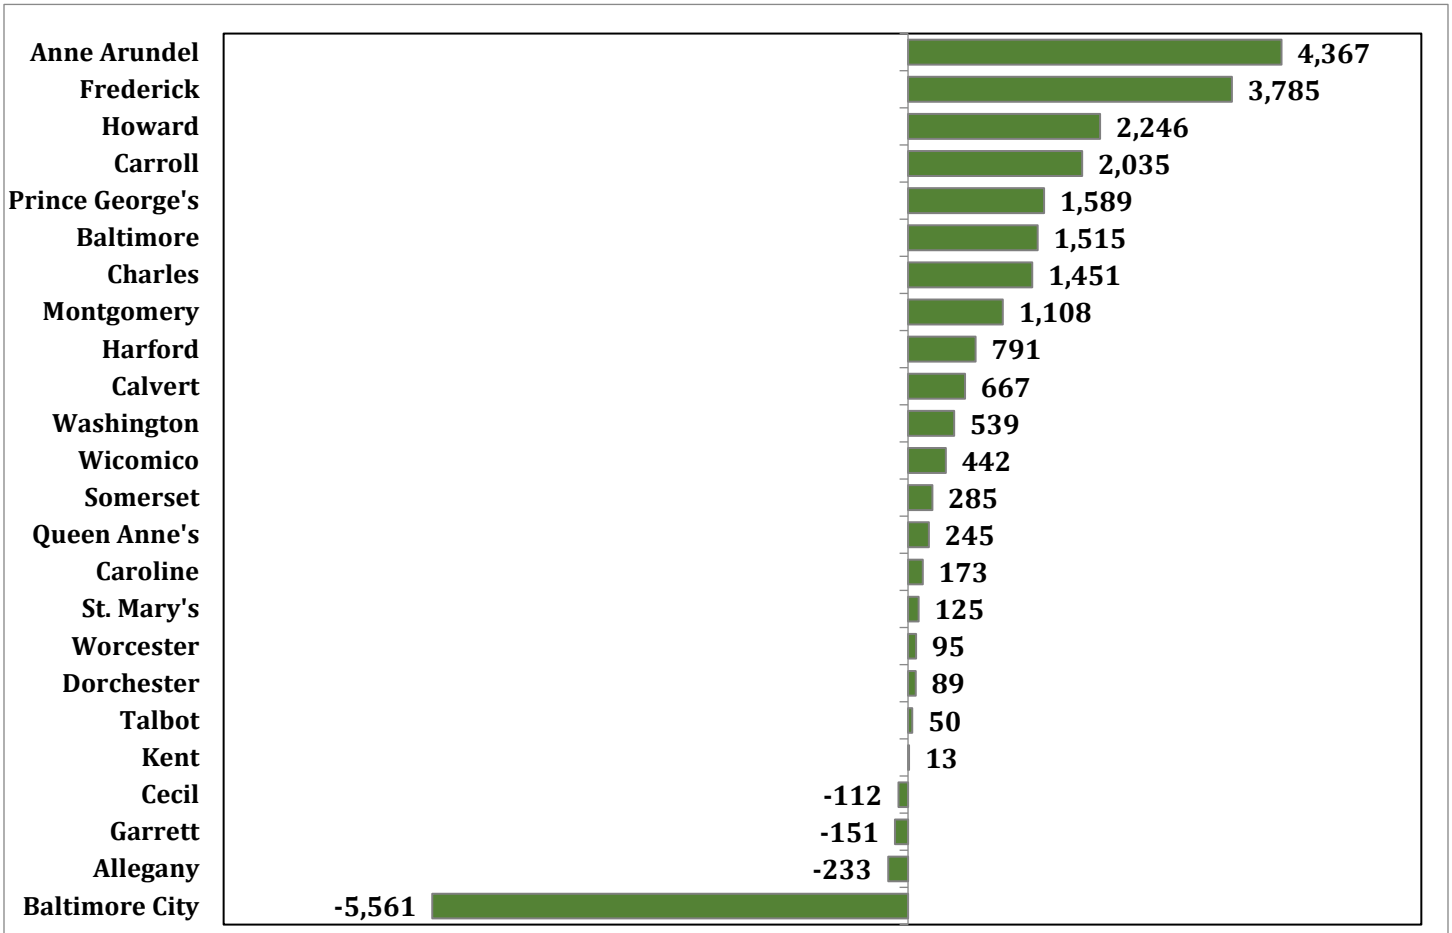
[8] This policy change is described further in the methodology section.

Jurisdiction Projections over the Next 10 Years

Total Enrollment

With statewide enrollment projected to grow over the next 10 years, most of the counties are projected to have their highest enrollment totals sometime over the next ten years (See Tables 3, 4 and 5). Most of the total statewide net gain between 2021 and 2031 is likely to occur in five of Maryland's 24 jurisdictions: **Anne Arundel** (4,367), **Frederick** (3,785), **Howard** (2,246), **Carroll** (2,035), and **Prince George's** (1,589) counties (See Chart 20). Four jurisdictions are expected to have lower enrollments in 2031 compared to their 2021 enrollments: **Baltimore City** (-5,561), **Allegany** (-233), **Garrett** (-151), and **Cecil** (-112) **counties**

Chart 20- Change in Public School Enrollment by Jurisdiction, 2021 – 2031



Source: Maryland Department of Planning

The source of enrollment growth will vary by jurisdiction. For example, growth in **Prince George's** and **Montgomery** county schools is mostly due to gains from foreign-born immigration: two out of every three new immigrants to Maryland have moved to those counties since 2000.[9] At the same time, domestic outmigration from **Montgomery** and **Prince George's** counties is a major source of enrollment growth for **Frederick** and **Charles** counties respectively, these suburban counties will experience the second and seventh largest numeric increases over the ten-year projection period.

[9] Source: U.S. Census Bureau, Population and Housing Unit Estimates program. Estimates derived from the components of population growth (2000 to 2021). International migration data presented for the state of Maryland, and Montgomery and Prince Georges counties.

Source: Maryland Department of Education (2021).
Projections (2022-2031) prepared by the Maryland Department of Planning.

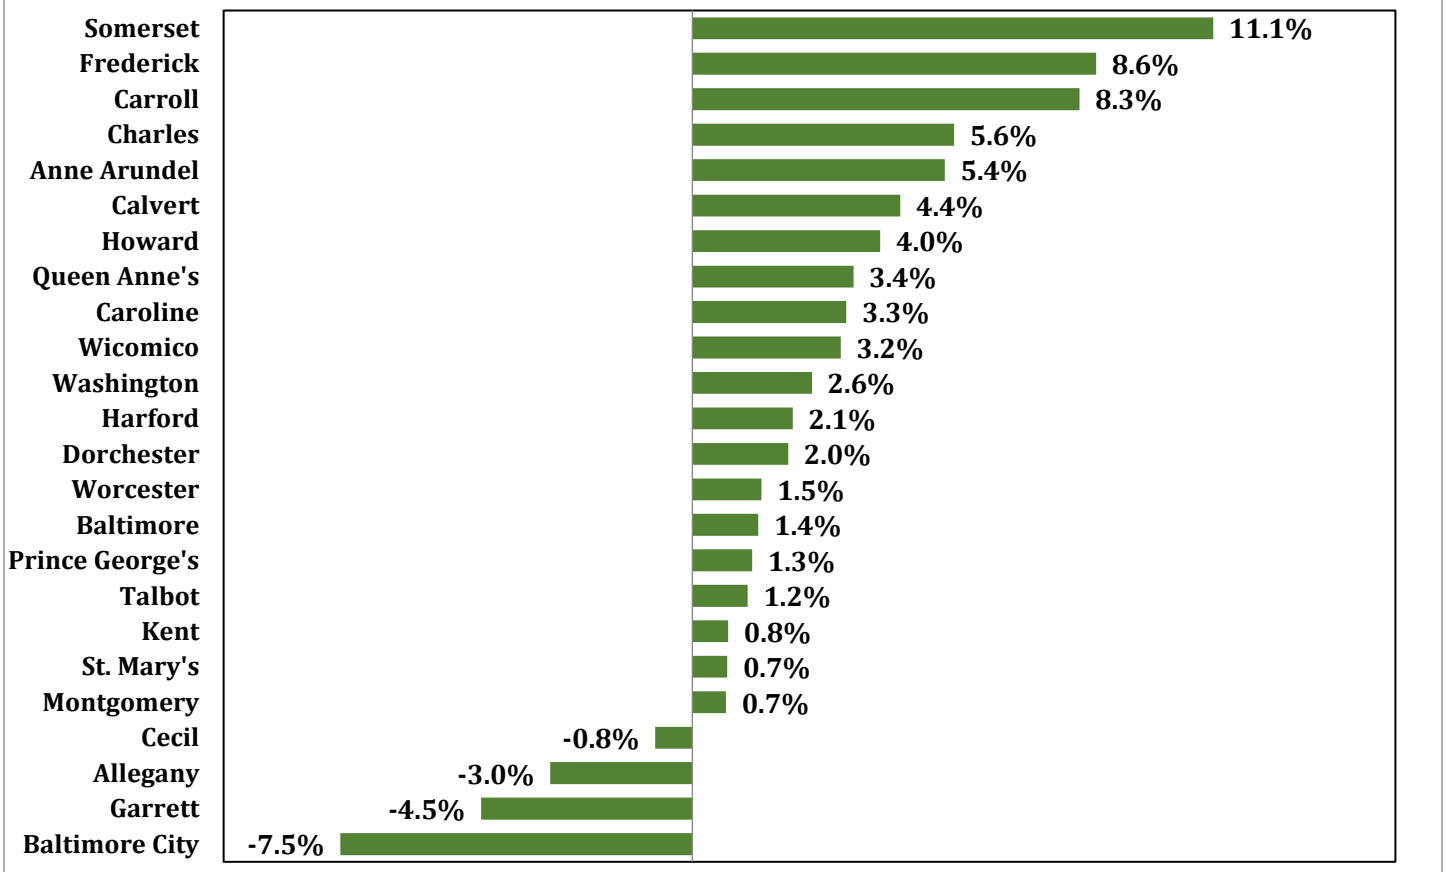
Intra-state outmigration from the **Baltimore Region** and **Suburban Washington region**, as well as population gains from international migration, are important components of enrollment growth for the **Southern Maryland region** particularly in **Calvert and Charles Counties**. Families moving from the **Baltimore region,** primarily **Baltimore City,** as well as increases in births are the drivers for **Somerset County's** enrollment increases**. Anne Arundel County's** projected increases in student enrollments are due to increases in federal employment (e.g., the expansion of Homeland Security, National Security Agency and the Transportation Security Administration) and intra-state migration flows primarily from **Prince George's County** and **Baltimore City**. **Howard County's** enrollment growth is largely fueled by increases in the minority population – particularly Asian and Hispanic. The county also benefits from international migration and in-migration from other Maryland jurisdictions. In **Frederick County** increases in school enrollment are mostly due to domestic migration and increased residential construction.

Baltimore City experienced 15 consecutive years of decline, losing nearly 30,700 students (-28.3%) between 1994 and 2007. Despite an increase in total enrollments from 2007 to 2014, enrollments declined from 2015-2019, slightly increased in 2020 and continued in a reduction pattern in 2021. **Baltimore City's** public school enrollment is projected to decline over the next 10 years, most of these declines occur from 2022 to 2025. **Baltimore city's** enrollment from 2022 to 2024 is projected to decrease at a relatively rapid rate, following years through the end of the projection period see declines but at a slower rate. Public school enrollment in **Baltimore City** is projected to decline by 5,561 students over the ten-year span. This most recent decline is attributable in part to the increase in domestic outmigration and decrease in international migration to the City.

Among all jurisdictions in Maryland, **Somerset County** is projected to experience the largest percentage increase (11.1%) over the 2020-2030 period. **Frederick County** is projected to have the second highest percentage increase (8.6%), mainly due to strong overall population growth. **Carroll County** is projected to have the third highest percentage increase (8.3%), mainly due to strong overall population growth and increases in births. Other counties expected to have significant enrollment gains over the projection period are **Anne Arundel** (5.4%) and **Howard** (4.0%) counties in the Baltimore Region; **Charles** (5.6%) and **Calvert** (4.4%) counties in the Southern Maryland Region; **Queen Anne's County** (3.4%) in the Upper Eastern Shore Region; and **Washington County** (2.6%) in the Western Maryland Region. (See Chart 21 and Table 5.)

Only four jurisdictions are projected to have a decline in enrollment over the next 10 years: **Baltimore City, Allegany County, Garrett County**, and **Cecil County**. Enrollments in **Baltimore City and Allegany County** are projected to fall every year after 2021. Over the projected ten years, **Garrett County** enrollment is expected to decline in five of those years, make gains in two of those years, and have no numerical change in three of those years**. Cecil County** is expected only a marginal overall decline through the 10-year projection period with five years of decline and five years of growth in enrollment. The combined impact of lower international migration and increased domestic out-migration will lead to lower enrollment projections for these four counties.

Chart 21- Percent Change in Public School Enrollment by Jurisdiction, 2021 – 2031



Source: Maryland Department of Planning

The projected growth in **Prince George's County** over the next 10 years represents a turnaround from recent trends. Between 2003 and 2012, total public-school enrollment in the county dropped by nearly 15,600 (-11.7%). These declines occurred even though the county had the second largest numeric increase, overall, in population between 2000 and 2010. However, among specific school-age groups, the county experienced declines. For example, between 2000 and 2010, the number of five to nine-year-old's dropped by -9,600 and the number of ten to fourteen year-old's fell by -3,800. It would appear, based on data from the Census Bureau's 2000 and 2010 Censuses, that families with children moved to other jurisdictions over that decade. Annual school enrollment increased every year from 2013 to 2021, with the largest increase occurring in 2019 (3,155). It is expected that a substantial number of births and continued immigration will lead to significant growth in enrollment over the next 10 years.[10]

[10] Preliminary estimates by the U.S. Census Bureau's Population Estimates program show that **Prince George's County** had an increase in the number of 0 to 4 years old (768) between April 1, 2010 and July 1, 2019..

Elementary School Enrollment

Eleven of twenty-four jurisdictions in Maryland are projected to reach peak enrollments in 2031. Ten counties are projected to peak between 2026 and 2030, for the remaining three counties the peak is projected to occur between 2021 and 2024 (See Tables 6, 7 and 8).

Growth in elementary school enrollment began in 2007, for most jurisdictions, when the transition to both full-day kindergarten (2007), as well as the new age-eligibility requirements for kindergarten (2006) and first grade (2007) students were completed. Although statewide enrollment will be higher at the end of the 10-year projection period, the statewide total saw a sharp declines in both 2020 and 2021, however a rebound in enrollment is anticipated through 2026, with a decline returning in only 2027. Most of the increases in elementary enrollment is projected to occur between 2023 and 2026: an increase of 1,180 in 2023, 1,110 in 2024, 1,550 in 2025 and 3,190 in 2026.

The largest projected gains in elementary enrollment are expected in four jurisdictions: **Anne Arundel** (2,915 or 7.9%), **Prince George's** (2,721, or 4.8%), **Baltimore** (1,645 or 3.4%) and **Frederick** (1,376, or 7.1%) counties. In percentage terms, the largest gains in the Baltimore Region are forecasted for **Carroll** (8.8%), in the Suburban Washington Region **Frederick County** (7.1%), in the Upper Eastern Shore Region **Caroline County** (10.4%) and **Kent County** (14.9%) in the Lower Eastern Shore Region and **Somerset** (23.4%).

Baltimore City is projected to have the largest decline in elementary enrollment over the 10-year projection period (-2,623, or -7.6%). **Howard County** is expected to have the second largest numeric decline in elementary enrollment by the end of the 10-year projection period (-316, or -1.3%).

Projections (2021-2030) from the Maryland Department of Planning.

Middle School Enrollment

Middle school enrollment in the 2012-2018 period, showed average annual gains of 3,400 students. The addition of 5,959 middle school students in 2019 was the largest enrollment increase in 25 years. However, enrollment fell during 2020 by 812 students and decreased by 5,090 students in 2021. Over the projection period, 2022-2031, seven years of enrollment declines (2022, 2023, 2024, 2025, 2026, 2030 and 2031) and three years of enrollment gains (2027, 2028 and 2029) are anticipated. The largest projected percentage increase occurs in 2029 at 1.7 percent (or a numeric increase of 4,360 enrollments); the largest projected percentage decrease occurs in 2022 at -1.8 percent (or a numeric decrease of 3,644). Middle school enrollment is expected to be lower in 2031 than in 2021, decreasing by 1,654 or 0.8 percent over a ten-year period. (See Tables 9, 10 and 11).

Compared to 2021, 13 of the 24 jurisdictions will have lower enrollment in 2031, with nine of these jurisdictions reaching their peak enrollment in 2021. (See Table 9). Eleven counties will experience growth over the next ten years with the highest cumulative increases in: **Frederick** (731, or 7.0%), **Carroll** (691, or 12.1%), **Howard** (691 or 5.2 %) and **Charles** (364, or 5.9%) counties.

Baltimore City is expected to have the largest decline (-2,078, or -12.0%) in middle school enrollment of the thirteen jurisdictions that are anticipated to have declines in middle school enrollment. Losses for **Baltimore City** are projected to occur in seven of the ten projected years.

Relatively large percent declines are projected for **Worcester** (-123, or -8.0%), **Garrett** (-51, or -6.4%) and **Wicomico** (-198, -6.1%) counties. **Worcester County** gains middle school enrollment in 2022, followed by declines or no gains in the remaining years of the projection period. **Garrett County's** declines are expected to occur mostly in the first half of the projection period. In **Wicomico County**, enrollments are projected to increase in the middle part of the projection period with most of the decline occurring in the first three years of the projection period.

Projections (2022-2031) prepared by the Maryland Department of Planning.

High School Enrollment

Statewide, high school enrollment has increased the past 6 years following seven years of decline (2007-2015) and a small gain in 2014 (447, the first since 2006). Looking forward into the ten-year projection period overall high school enrollment is expected to increase by 4,927 (1.8%) above 2021 levels. The 2024 total of 284,010 would represent a new historical peak for high school enrollment in Maryland, exceeding the 2006 peak total of 272,575 by 11,435 (4.2%). Most of the growth is expected to occur in the first 3 years of the projection period. Nineteen jurisdictions are expected to have their largest high school enrollments by 2024, (See Tables 12, 13 and 14.) the remaining five jurisdictions are projected to have their peak high school enrollment in the last two years of the projection period; of those five, only one occurs in 2025.

The top five jurisdictions with the largest cumulative gains by the end of the projection period are **Howard** (1,871, or 10.2%), **Montgomery** (1,788 or 3.5%), **Frederick** (1,678, or 11.9%), **Anne Arundel** (1,140, or 4.6%) and **Harford** (463 or 4.0%). Three of the five counties **Anne Arundel, Harford and Montgomery** counties– are expected to peak in 2024, while **Frederick and Howard** are expected to peak in 2030 and 2031.

Twelve counties are projected to have lower high school enrollments in 2031, of those the largest decreases are: **Baltimore City** (-860, -3.8%), **Cecil County** (-338, -7.3%), **St. Mary's County** (-332, -6.2%), **Washington County** (-267, -3.9%), and **Baltimore County** (-220, -0.6%)

Projections (2022-2031) prepared by the Maryland Department of Planning.

Methodology

The methodology used in preparing the enrollment projections involves an explicit effort to use the Maryland Department of Planning's latest age-specific population projections (December 2020) for each political subdivision to guide the selection of key parameters used to develop grade-specific school enrollment projections. Thus, the age-specific population projections provide a starting point for deriving the public-school enrollment projections.

Population Projections

Age-specific population projections for each jurisdiction are used to assist in estimating the following parameters relevant to the school enrollment projections:

- The projected school age population (5-17 years old); and
- Projected live births.

The historical relationship between the school age population (5-17 years) and total persons enrolled in school (both public and private) from the 2010 and 2020 censuses and the 2016- 2020 American Community Survey is used in conjunction with the projected school age population to project a range of total school enrollment for each jurisdiction. The historical relationship between total (includes both public and private school enrollments) and public-school enrollment is then combined with projected total school enrollment to derive a range of estimates of the projected public-school enrollment for each jurisdiction. The range (high, middle and low) of projections of public-school enrollment based on projected school age population are subsequently used as a guide in selecting the assumptions for the public-school enrollment projections derived by the grade succession ratio methodology.

Grade Succession Projections

The grade succession ratio methodology requires historical data for each political subdivision on the number of live births and the number of children enrolled in public schools by grade. For these projections, historical birth data for the years 1970-2020 and historical school enrollment data for the period 1975-2021 are analyzed.[11]

With the phase-in of older age-eligibility requirements for kindergarten beginning with school year 2003 (and first grade for school year 2004), historic birth data by month was used, starting with calendar year 1998, to derive "kindergarten-eligible births" five years hence and "first grade-eligible births" six years hence. Students entering kindergarten in the fall of 2003 must have been age five by November 30, 2003. Age eligibility was raised by one month in the following three years until the 2006 school year, when students entering kindergarten were required to be age five by September 1, 2006 and age six by that date for the first grade. Thus, during the four-year phase in period (school years 2003-2006 for kindergarteners and 2004-2007 for first graders), only 11 months' worth of births were eligible for each school year. [12]

[11] Birth data are from the Maryland Department of Health. Since 1991, these data have been derived by geocoding the birth mother's address to the jurisdiction of residence.
[12] For example, for the 2006 school year beginning in the fall of 2006, eligible births for kindergarten enrollment would be for the 11 months from October 2000 through September 1, 2001.

Besides historical data on the ratios of births and associated enrollment in kindergarten and first grade, historical grade succession ratios that reflect projected grade cohort survival for all other grades, from first to second grade and from eleventh to twelfth grade, are analyzed. Specific combinations of historic ratios are then selected that generate grade-specific school enrollment projections that are consistent with the range of school age population-based projections of public-school enrollment. The resulting grade-specific school enrollment projections combine the effects of:

- Births in a given year which are eligible for subsequent kindergarten and first grade enrollment;
- Mortality for school age children;
- Net migration of school age children;
- Net transfer of children between public and private schools;
- Non-promotion of children to the next grade level; and
- Dropouts in the later years of secondary school.

The grade succession methodology consists of several computational steps. First, the ratio of kindergarten and first grade enrollment for the historical period to enrollment-eligible live births five and six years previously to enrollment are calculated for each jurisdiction. These ratios reflect recent trends in both births and migration for children entering public schools. For example, where a jurisdiction's historical ratio of kindergarten and first grade enrollment to births is significantly less than one, this reflects either net outward migration of potentially eligible enrollees or a high proportion of private school enrollment (or some combination of the two). Where a jurisdiction's ratio is significantly greater than one, this reflects a net inward migration of school age children or a lower proportion of private school enrollment (or some combination of the two).

Based on the projected births and the anticipated future relationship between births and kindergarten as well as first grade enrollment, ratios are developed for the projection period (see tables in the report for each jurisdiction titled, "Ratio Kindergarten and First Grade to Births - Historical and Projected," where the projected ratios are for the 2021-2031 period and projected births are for 2021 to 2026).

By comparing the ratios for the projected years to the historical ratios of enrollment in kindergarten to births five years previously (as well as first grade enrollment to births six years previously), specific projected ratios of enrollment in kindergarten to births (and enrollment in first grade to births) are selected (See Appendix B tables titled "Ratio Kindergarten and First Grade to Births - Historical and Projected"). Additionally, implementation of full-day kindergarten by 2007 was specifically considered in selecting kindergarten to birth ratios.[13]

For each jurisdiction, grade succession ratios for other than kindergarten and first grade are calculated by grade from enrollment in the preceding year for the historical years 1983-2020. (See tables in the report titled "Grade Succession Ratios - Historical," which show in the top section of the table the grade succession ratios for each pair of years.)

[13] It is also for this reason that first grade enrollment was projected using the ratio to births as opposed to the grade succession ratio of first grade to K.

In the bottom section of these ratio tables are a series of constructed averages of two or more historical single-year ratios (e.g., average for the last two years, average last two years minus most recent year, etc.). It should be noted that, for purposes of deriving reasonably unbiased grade succession ratios, the historical enrollment in special education and ungraded classes before school year 2004 are distributed among the graded students in proportion to the number of graded students in the respective elementary and secondary grades. This procedure helps to eliminate variations in the ratios from year to year due to changes in policy and practices with respect to ungraded and special education enrollment. Beginning in 2004, all public school special education and ungraded students are assigned a grade.

Using the projected ratios of kindergarten to births and first grade to births as shown in "Ratio Kindergarten and First Grade to Births - Historical and Projected", and the alternative grade succession ratios shown in the "Grade Succession Ratios – Historical" for grades two through twelve, alternative school enrollment projections are derived for each jurisdiction using the "grade succession" methodology. The actual grade succession ratios used for the school enrollment projections are noted at the bottom of each jurisdiction's "Grade Succession Ratios – Historical" page.

The process of selecting the grade succession ratios for each jurisdiction is aided by the comparison of the range of population-based projections of anticipated public-school enrollment to the grade succession ratio-based projections. The selected "grade succession" projection is the one that appears most reasonable given the projections of school age population and births and the trends in public school share of total (public and private) enrollment.

The actual process of using the various succession ratios to calculate the projected enrollment by grade for each jurisdiction is relatively straightforward. The ratio of kindergarten to births and first grade to births for the projected period is multiplied by the respective eligible births five and six years previously, respectively, to arrive at projected kindergarten and first-grade enrollment for 2022-2031.

Using the selected values for the succession ratios for grades two through twelve, current enrollees (2021) and projected new enrollment in each year (including first-grade students derived by the ratio with births six years prior) are succeeded from one grade to the next for each year in the projection period.[14] The resulting projections of school enrollment by grade, by year, for the years 2022 through 2031 for each county and Baltimore City appear in the body of this report.

Adjustments for Compulsory Public School Attendance

Beginning with the projections for 2022 to 2031, additional steps in the calculation of grade succession ratios were added to account for the passage of SB362 in the 2012 Maryland legislative session which raised the age for compulsory public-school attendance in two stages: age 17 starting in July 1, 2015 and age 18 starting in July 1, 2017. Historical data on the number of dropouts by age by grade by jurisdiction were obtained from the Maryland State Department of Education for enrollment years 2009/2010 to 2020/2021. Due to the declines in the number of reported dropouts statewide, however, only data for the most recent year (2020/2021) of this five-year

[14] The kindergarten (and first grade) enrollment in "Ratio Kindergarten and First Grade to Births - Historical and Projected" include ungraded and special education enrollment prior to school year 2004 based on the distribution of these enrollment figures as shown in the "Grade Succession Ratios – Historical" tables.

period was used.

The following assumptions and processes are used to account for the change in the age for compulsory public-school attendance:

- The number of 2020/2021 dropouts (by age and grade) that no longer would be eligible to drop out with the new law are put back into the grade from which they dropped out.[15]
- Each year the 2020/2021 dropouts are added to each grade. Each succeeding year, the dropouts are carried forward with the following assumptions:
    - In the succeeding year, if they remain ineligible to drop out, assume 85 percent "succeed" to the next year.
    - If they are now eligible to drop out, assume 50 percent do. Each additional year, each succeeding cohort is reduced by one-half.
    - Cohorts are succeeded to age 19. Afterwards they are eliminated.
- A matrix of total dropouts is added by year out to the latest projection year.

Note that the dropouts derived by the method described above are added in after the grade succession results. Thus, the dropouts are not subject at any time to the grade succession ratio process that applies to the rest of the enrollment. Accounting for the increased age of compulsory public-school attendance results in an increase in high school enrollment by the last year of the projection period of just under two percent.

[15] It was assumed that 2.5 percent of the dropouts would qualify for the exemptions under the law and would still have dropped out. In other words, 97.5 percent of the dropouts were added back into the appropriate grades.

Organization of Detailed Data Tables

This report includes three Appendices containing statistical tables on historical and projected enrollments. Appendices A and B include detailed enrollment tables by grade for the State of Maryland and its 24 jurisdictions (Baltimore City and the counties) respectively. Appendix C summarizes by jurisdiction the historical total, public and private school enrollments from 2011 through 2021 as well as the projected public-school enrollments from 2022 -2031.

The figure below lists the detailed data tables and their availability by Appendix.

The following terms used in the explanation are defined as:

- "Elem Special" - designates those pupils requiring special education due to special needs;
- "Other Ungraded" - designates those pupils assigned to no specific grade in the elementary grades;
- "Sec Special" - designates those pupils in the secondary grades requiring special classes due to special needs; and
- "Other Sec Ungraded" - designates secondary pupils assigned to no specific grade in the secondary grades.

Note: Starting with school year 2004, all public school special education students are assigned to a grade. Therefore, there are no public school "special" or "ungraded" students for years after 2003. For private schools, assignment of special or ungraded students to specific grades began in 2009.

Summary enrollment figures for elementary (grades K through 5), middle (grades 6 through 8) and high (grades 9 through 12) schools also appear at the bottom of each of the first four tables along with a summary total of all secondary enrollment (grades 6 through 12).

The historical grade succession ratios for grades 9 through 12 do not reflect adjustments made to account for increases in the compulsory age for public-school attendance to age 17 starting in July 1, 2015 and to age 18 starting in July 1, 2017. See the Methodology section for an explanation of how adjustments to grade-succession derived enrollments were adjusted.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Average Ratios		Kindergarten/Birth	1st Grade/Birth

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Average Ratios		Kindergarten/Birth	1st Grade/Birth

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time fram for kindergarten eligibility.
