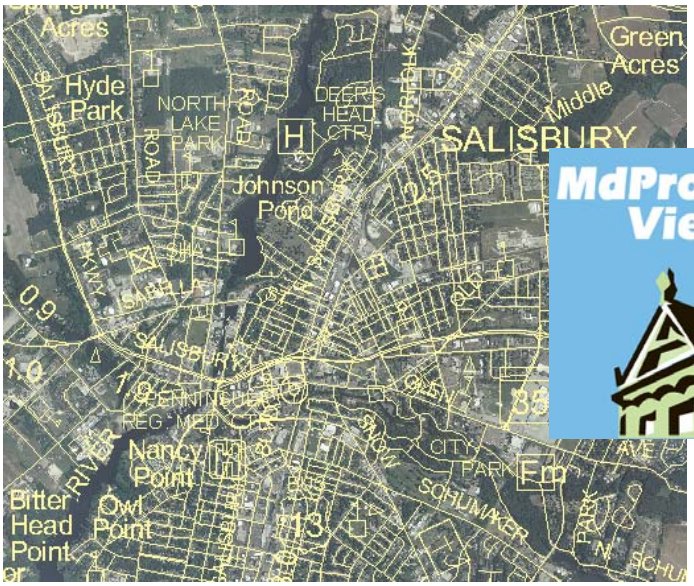
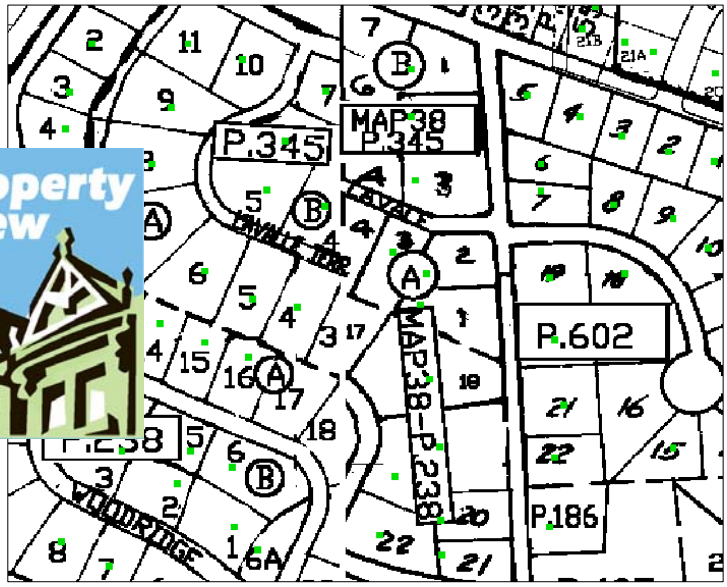
MdProperty View Wicomico County 2010 Edition

The Maryland Department of Planning has assembled this DVD to assist *MdProperty View* Subscribers in accessing digital Real Property maps and Parcel data and searching (via parcel account number, street address, owner name or MAP and PARCEL number) for parcel locations countywide. Once a parcel or group of parcels is selected, you can link directly to the current parcel information via the State Department of Assessments and Taxation (SDAT) Real Property website, view the tax map where the parcel is located and print a parcel report – or perform more sophisticated GIS analyses.

The property maps, data files and Enhanced User Tools contained on the DVD have been set up to work with **ArcView** or **ArcGIS** in a Windows environment. The 109 property maps are current as of November 2010 and the information contained in the Parcel dataset is current as of late July 2011. The DVD also contains color digital-ortho imagery, State Highway Administration road and feature files, a tax map index grid and an ADC® page number grid to help orient the user to locations inside Wicomico County. Also included with *MdProperty View* are a number of additional thematic map layers including ZIP code boundary files, census geography and census demographic data, legislative and congressional district boundary files, land use/land cover data, Priority Funding Area (PFA) designations, floodplain data, generalized zoning designations, protected land boundaries, sewer service area boundaries, National Register of Historic Places (NRHP) Maryland coverage, watershed data and residential Sales x,y point files for CY 2009-2002 derived from the SDAT parcel data.





Wicomico County has a population of 98,733 people (April 1, 2010 Census PL94-171 release) and contains 46,496 properties. The jurisdiction is located in Maryland's Lower Eastern Shore region and is bounded by Dorchester County to the west and north, the State of Delaware to the north, Worcester County to the east and south and Somerset County to the south. The datasets contain a parcel record location point in x,y coordinates (NAD83 meters) – the vast majority of properties, 46,334 parcels (99.65%), were located by the subdivision lot or parcel number as shown on the property maps.
