Note: For information on data collection, confidentiality protection, nonsampling error, subject definitions, and guidance on using the data, access the [2020 Census Supplemental Demographic and Housing Characteristics File \(S-DHC\) Technical Documentation](#).

To protect respondent confidentiality, data have undergone disclosure avoidance methods which add statistical "noise" - small, random additions or subtractions - to the data so that no one can reliably link the published data to a specific person or household. As a result, data users may observe implausible and improbable data within this product and compared with other 2020 Census data products. For more information, access the 2020 Census Supplemental Demographic and Housing Characteristics File (S-DHC) Technical Documentation.

The degree of uncertainty introduced by statistical noise and post-processing is represented through a 90 percent credible interval (CI). The CI does not account for the truncation of large households (maximum of 10 persons per household or 6 children under 18 years). The CI can be interpreted as providing 90 percent probability that the truncated value is between the lower and upper end points. The enumerated value can be larger than the 90% CI high value given household truncation. For information on the impact of truncation, refer to the 2020 Census Supplemental Demographic and Housing Characteristics File (S-DHC) Technical Documentation.
