Public School Enrollment Projections, 2024-2033  
June 2024 Publication No. 2023-001

This Public School Enrollment Projections report was produced by the Projections and State Data Center of the Maryland Department of Planning as a service to local governments and planning officials.

## Foreword

This report, entitled Public School Enrollment Projections, 2024-2033, is an update of the Maryland Department of Planning's (MDP) annual report on public school enrollment statistics.

The report provides projections of public school enrollment through 2033 by grade for each of Maryland's 24 jurisdictions (23 counties and Baltimore City). Statistics on actual total and public-school enrollment for 2013-2023 are also included.

The public school enrollment projections utilize MDP's population projections by age and sex for each jurisdiction. The population projections are used to derive the school-age population (persons 5-17 years of age) and projected births. These projections are then used in conjunction with a "grade succession" methodology to derive the ten-year, grade-specific enrollment projections.

A preliminary set of enrollment projections and supporting materials documenting the projection methodology were sent previously to each School Superintendent and facility planner.

# Executive Summary

## Statewide Totals

Maryland’s total public-school enrollment decreased in 2023 by 488 students following a gain of slightly over 5,500 enrollments in 2022. Leading up to the pandemic, school enrollment showed strong growth between 2011 and 2019 with Maryland’s public-school enrollment growing by 51,882 or 6.3 percent. These gains are attributed mainly to increases in births, international migration, and new housing construction. However, during the COVID-19 pandemic, enrollment fell by 23,503 students between 2019 and 2021.

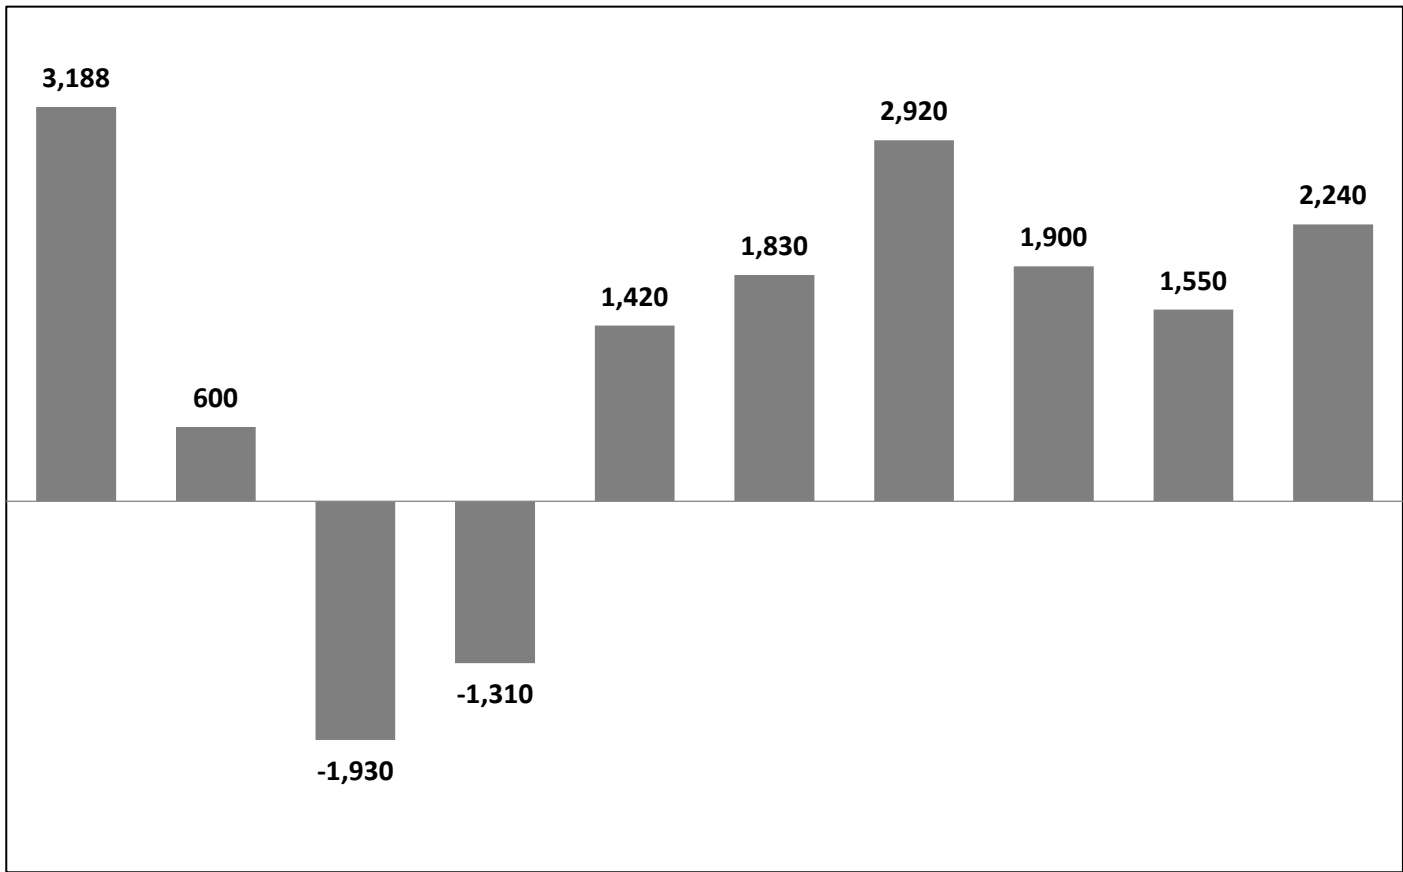

Chart 1 – Historical Annual Change in Total Public School Enrollment in Maryland, 2013-2023

The Maryland Department of Planning (MDP) projects public school enrollment for the next 10 years (2024-2033). Enrollment is expected to increase in 2024 and 2025 due to growth in international migration. From 2026 to 2027, however, school enrollments are projected to decline. This drop in enrollments is a result of fewer births from 2020 to 2022. The lower number of births in those three years were a national trend as a result of the Covid-19 pandemic.

Moderate annual growth in public school enrollment is anticipated from 2028 through the end of the projection period in 2033 (see Chart 2). Public-school enrollment is projected to increase by 12,408 (1.4%) new students over a ten-year period from 2023 to 2033 (See Table 1.). Total enrollments should peak at 870,770 in 2033, the last year of the projection horizon.

Enrollment numbers are rounded to the nearest tenth,

Projections (2024-2033) prepared by the Maryland Department of Planning,

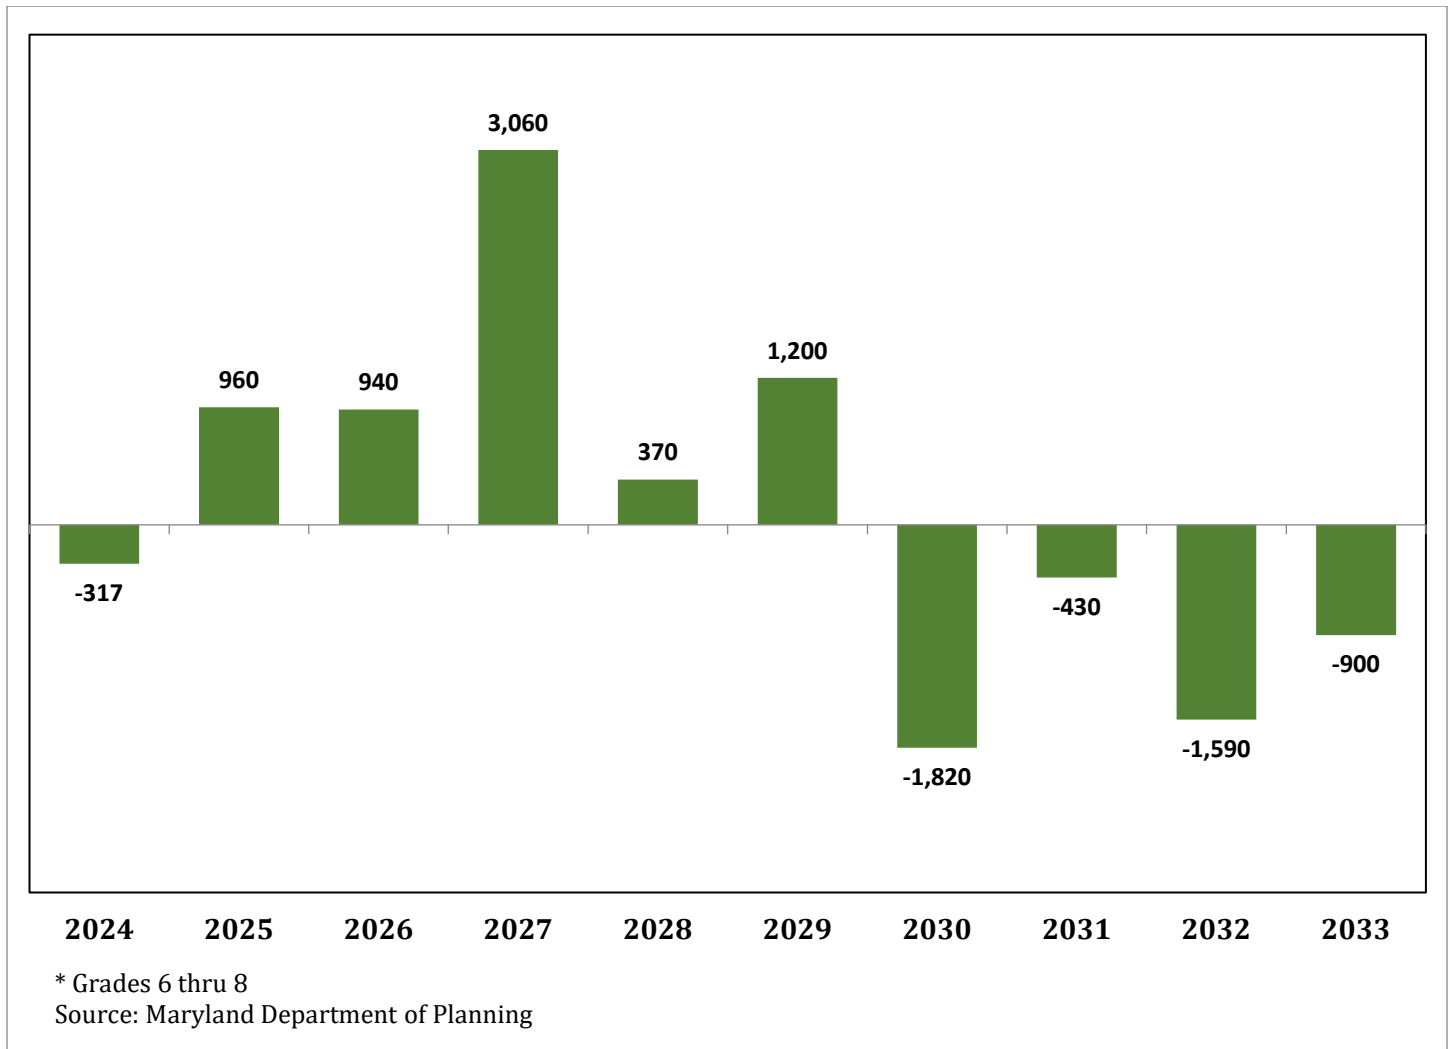

Elementary school enrollment (grades K through 5) is projected to increase in seven of the next ten years. Enrollments are likely to experience declines from 2026 to 2028. Which are attributed to a decrease in the number of births during the COVID-19 pandemic. However, over the projection period through 2033, enrollments are expected to increase by 5,584 or 1.5% when compared to historical 2023 enrollments. The largest yearly increase in K-5 enrollments is expected to occur in 2032 with an increase of 2,730 or 0.7%.

Chart 3- Projected Annual Change in Public Elementary School Enrollment in Maryland, 2024 – 2033 \*

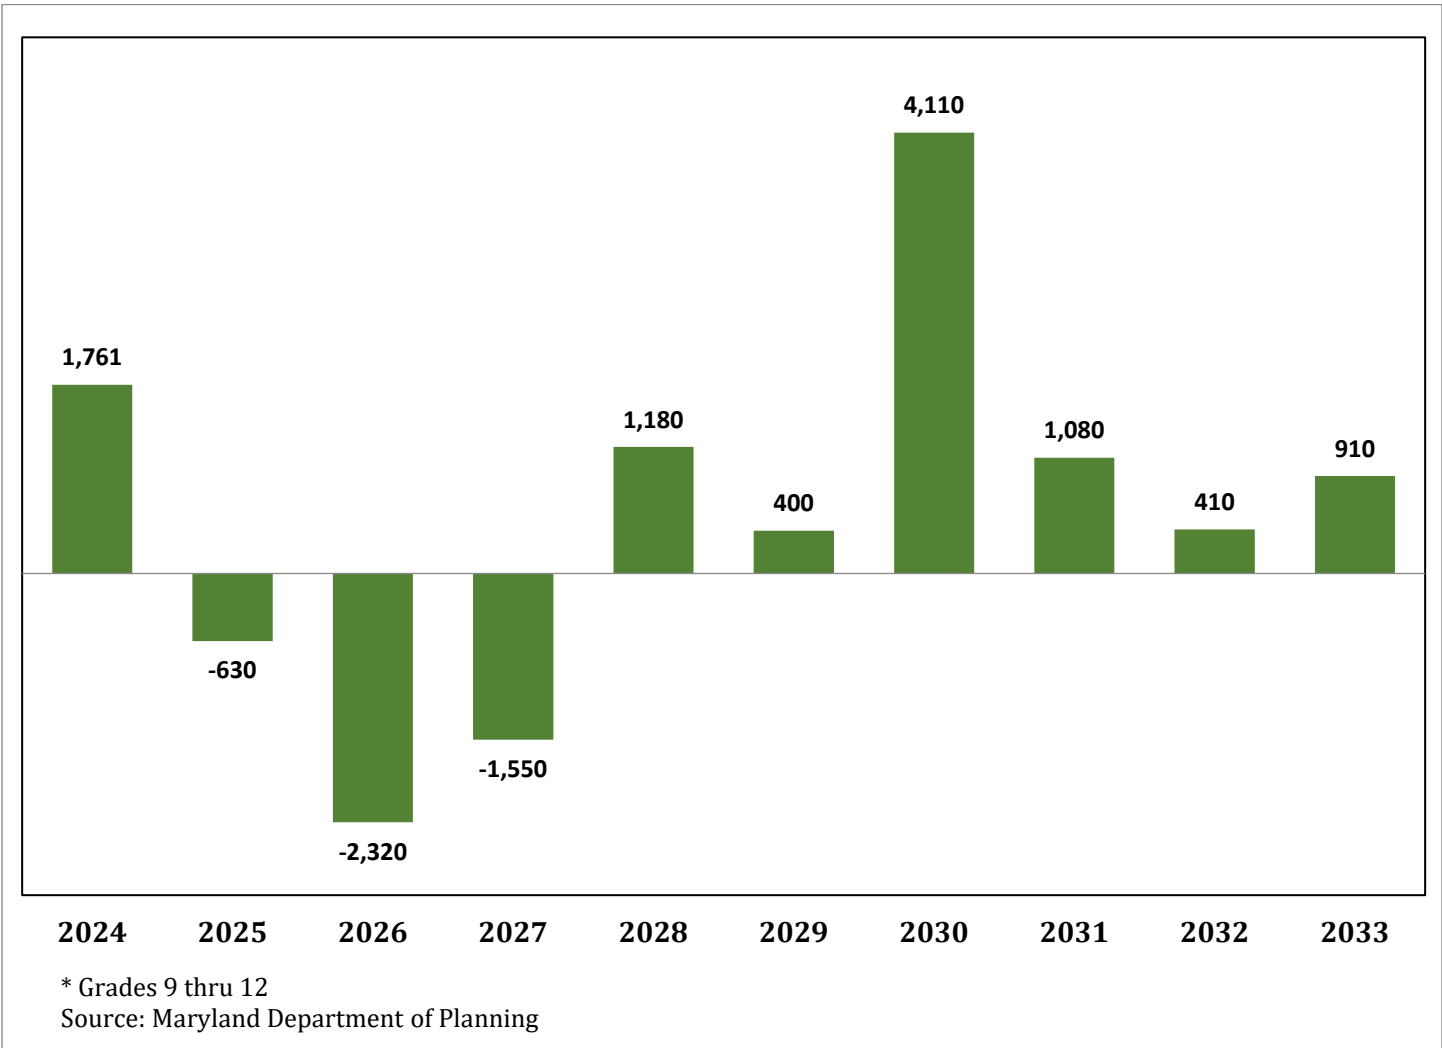

Middle school enrollment (grades 6 through 8) from 2023 to 2033 is projected to increase by 1,473 (0.7%). As shown in Chart 4, there are as many years of projected enrollment decline as enrollment growth. Growth from 2025 to 2029 is expected to add 6,530 middle schoolers to the student rolls. Increases in school enrollments, now and in the future, depend mostly on the number of child births and the movement of new families with young children. Both nationally and statewide, the trend is towards fewer births.

Chart 4- Projected Annual Change in Public Middle School Enrollment in Maryland, 2024-2033\*

High school enrollment (grades 9 through 12) is projected to increase by 5,351 (1.9%) from 2023 to 2033, with peak enrollment occurring in 2033. Despite overall growth throughout the projection period, declines in enrollments are expected from 2025 to 2027. Growth is expected to be strongest between 2029 and 2030 increasing by a total of 4,110 enrollments during this period. (See Chart 5.).

Chart 5- Projected Annual Change in Public High School Enrollment in Maryland, 2024-2033\*

## Jurisdiction Trends

Seventeen of Maryland's 24 jurisdictions are expected to have larger total enrollments in 2033 compared to 2023. The largest numeric increases are anticipated for **Frederick** (6,260) **Anne Arundel** (3,868), **Charles** (2,379) **Carroll** (1,948), and **Harford** (1,601) counties; the largest percentage increases are expected in **Frederick** (13.6%), **Somerset** (10.4%), **Charles** (8.9%) **Carroll** (7.6%), and **Washington** (6.2%) counties (See Table 2.)

**Frederick** (2,856) **Anne Arundel** (2,632), **Charles** (1,026) **Carroll** (920), and **Harford** (808) counties are expected to have the five largest numeric increases in elementary enrollment by 2033. Seven jurisdictions are expected to have lower elementary enrollment in 2033 than in 2023, with the largest decline in **Baltimore City** (-3,392, or -10.0%) followed by **Howard** (-2,006, or -8.2%), and **Montgomery** (-1,220 or -1.8%) counties. The largest percentage increases for elementary school enrollment are expected in **Somerset** (26.1%), **Kent** (15.8%), and **Caroline** (15.6%) counties.

**Frederick** (1,812), **Anne Arundel** (844), **Carroll** (586), **Charles** (438), and **Harford** (407) counties are expected to have the five largest numeric increases in middle school enrollment by 2033. Nine jurisdictions are expected to have lower middle school enrollment in 2033 compared to 2023, with the largest declines projected for **Baltimore City** (-2,441), **Prince George's** (-1,113), and **Montgomery** (-391) counties.

Nine jurisdictions are projected to have higher high school enrollment in 2033 compared to 2023. The five largest numeric increases in high school enrollment, over the projection period, are in **Montgomery** (2,203), **Howard** (1,830), **Frederick** (1,592), **Prince George's** (1,050), and **Charles** (915) counties. Four of the five jurisdictions projected to have the largest high school enrollment gains are expected to hit peak enrollments in 2033. Montgomery County is projected to have its peak high school enrollment in 2032. The remaining counties with the increases in high school enrollment through the projection period, Washington, Harford, Anne Arundel, and Carroll counties reach peak high school enrollments in 2032 or 2033.

The largest percentage increases in high school enrollment are projected for **Frederick** (10.6%), **Howard** (9.9%), **Charles** (9.9%), **Carroll** (5.5%), and **Washington** (4.8%) counties. Fifteen jurisdictions are projected to have a decline in high school enrollments in 2033 compared to their 2023 enrollments. The largest reductions in high school enrollments are projected to occur in **Baltimore City** (-1,921, -8.8%), **St. Mary's** (-351, -6.5%), **Cecil** (-342, -7.2%), **Queen Anne's** (-210, -8.9%), and **Garrett** (-198, -19.4%) counties.

Projections (2024-2033) prepared by the Maryland Department of Planning.

## Long-Term Statewide Demographic Perspective

Maryland's public school enrollments across all grades have been affected by the pandemic in both the short and long term. Chart 6 shows historical and projected public school enrollment, statewide. The longest span of increasing enrollment was 18 years between 1986 and 2003. Enrollments also increased over a ten-year period from 2009 to 2019. The largest number of students enrolled in Maryland schools since 1975 was 876,810 in 2019. Enrollments from 2019-2021 declined by 23,503 (-2.7 percent) while the number of children enrolled in homeschooling programs increased by 61.9 percent (+17,177 students).

Enrollments rebounded slightly in 2022 increasing by slightly over 5,500 students following the COVID-19 pandemic, while the number of homeschooled enrollments declined by nearly 5,400. However, most recently in 2023 enrollment marginally declined by 488 enrollments. Growth in enrollments is projected to occur in both 2024 and 2025 followed by a temporary decline between 2025 and 2027 as the smaller yearly birth totals during COVID-19 become eligible for school. Births are projected to rebound in the coming years reestablishing school enrollment growth throughout the remaining five years of the projection horizon. Between 2028 and 2033 an average yearly increase of 1,977 students is anticipated ending with a thirteen-year high enrollment of 870,770 in 2033.

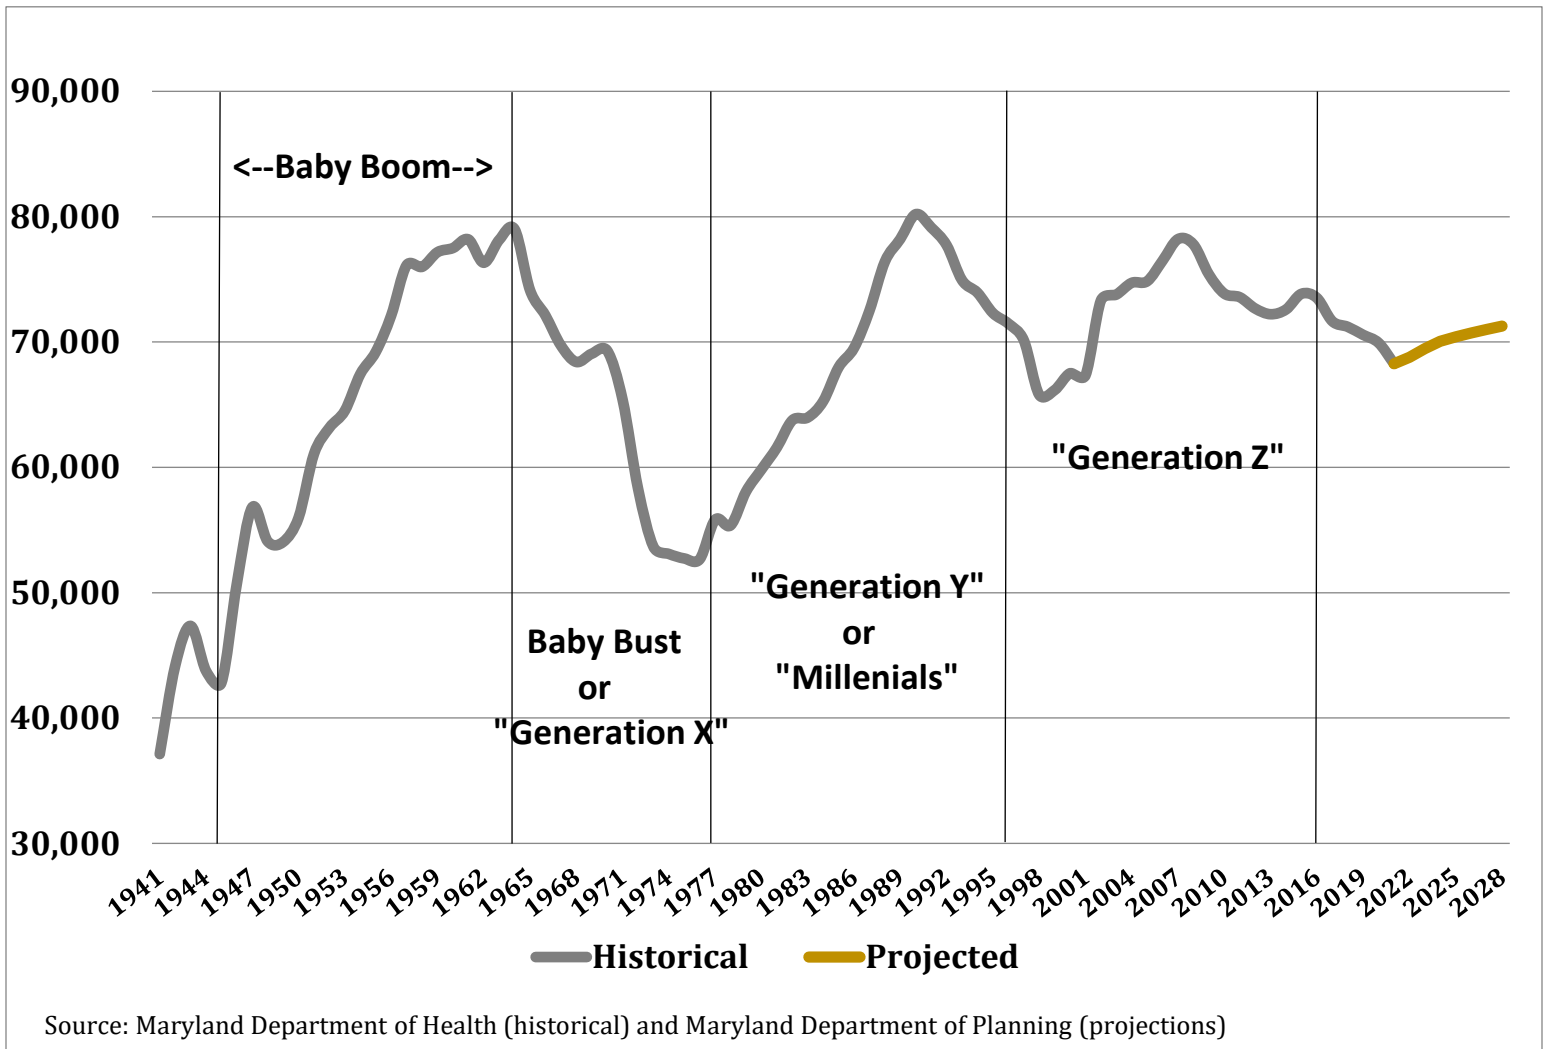

Chart 6- Total Public School Enrollment in Maryland, Historical and Projected, 1973–2033\*

## Births

Nationally, fertility rates have been declining and dropped precipitously during the years of the pandemic (2020-2021). Total births in 2020 were the lowest since 2001. Maryland's births are projected to average approximately 70,200 per year over the 2022 to 2028 period. Historically, births have been the most reliable measure of school patterns within the state. The number of births in Maryland began to decline after 1964, the peak year of the baby boom. The downward trend bottomed out in 1976. As births steadily increased, 1990 marked the new peak with 80,199 births. Echoing the Baby Boom, 1990 peak births (80,199) exceeded the 1964 peak (79,003) by almost 1200 newborns. (See Chart 7) The difference in the total number of births between the 1976 low and the 1990 high is dramatic- 27,527 more births were recorded in 1990 than in 1976, a 52.3% increase. Births declined from the 1990 peak to a low of 65,792 in 1998, a drop of just over 14,400, then generally rose until peaking again in 2007 at just over 78,000. The total number of births began to decline once again in 2008 with the advent of the Great Recession. Between 2008 and 2013 there were nearly 5,600 fewer births followed by a slight uptick (+1,629) over the next two years. Relatively slow job growth since 2016 compounded by the pandemic resulted in decreased births and birth rates<sup>1</sup>.

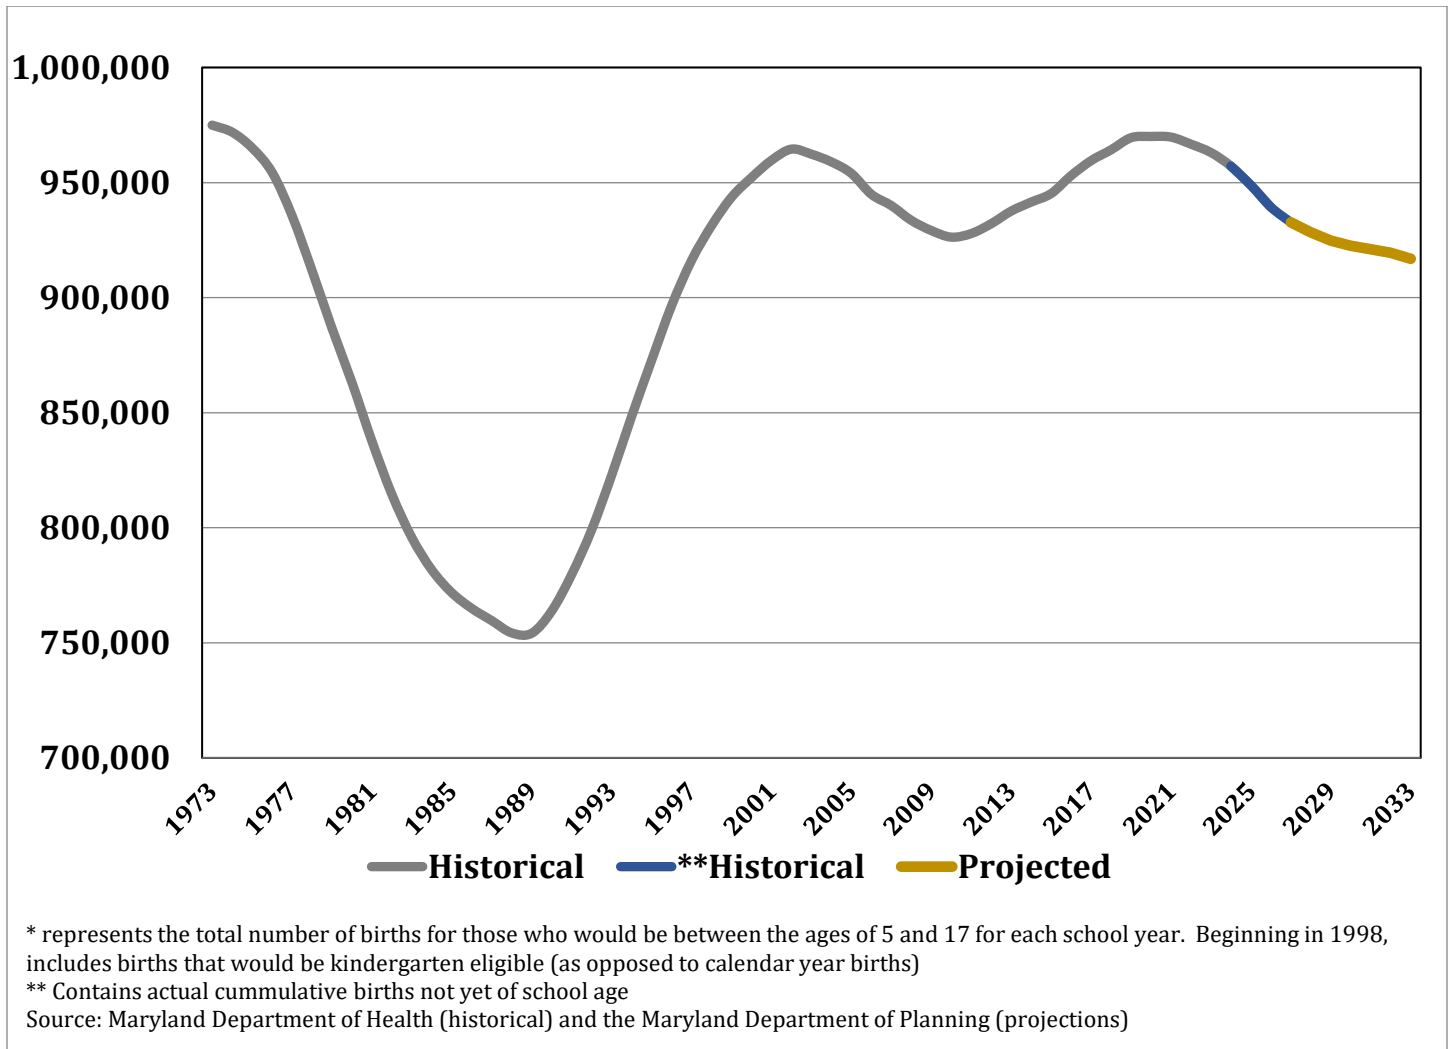

Chart 7- Total Births in Maryland, Historical and Projected, 1941 – 2028

<sup>1</sup> Economic downturns and periods of economic uncertainty tend to reduce overall fertility rates.

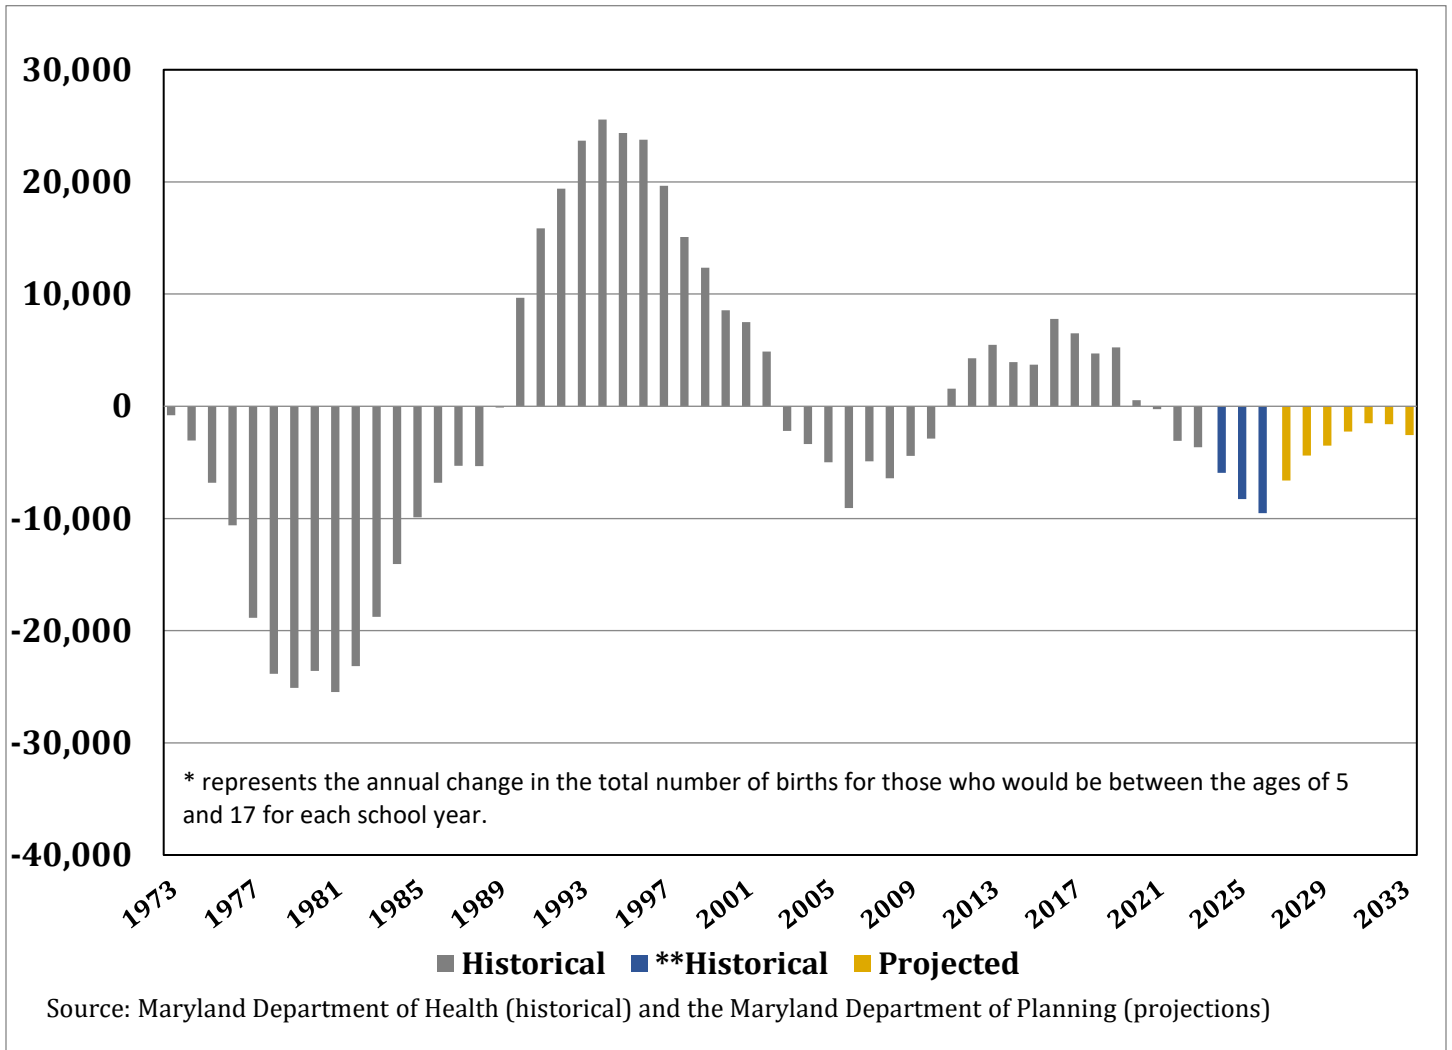

More important than births in any one year is the cumulative number of births over a 13-year period, which constitutes the potential enrollment pool for grades K through 12 for a specific school year. Cumulative births by year (those who are roughly between the ages of 5 and 17 for any given school year) reached a low point in 1989 at just under 754,200 and later peaked at 964,526 in 2002 (a difference of more than 210,000) (See Chart 8). Cumulative birth totals declined by slightly over 38,000 between 2003 and 2010. Growth in cumulative births returned in 2011 and continued to increase through 2020 adding nearly 44,000 births during this time. Cumulative births have declined since 2020 and are projected to continue reducing through the remainder of the projection horizon. Cumulative births are expected to be 916,886 in 2033 (See Chart 9).<sup>2</sup> These decreases in cumulative births in the initial part of the projection years correspond directly with slightly lower enrollment projections in the middle part of the projection period.

Chart 8- Cumulative Births by School Year in Maryland Historical & Projected, 1973 – 2033 \*

<sup>2</sup> All cumulative birth totals have been adjusted to account for the changing kindergarten age eligibility requirements that were phased in between 2003 and 2006.

Chart 9- Annual Change in Cumulative Births by School Year in Maryland, Historical & Projected, 1972 – 2032\*

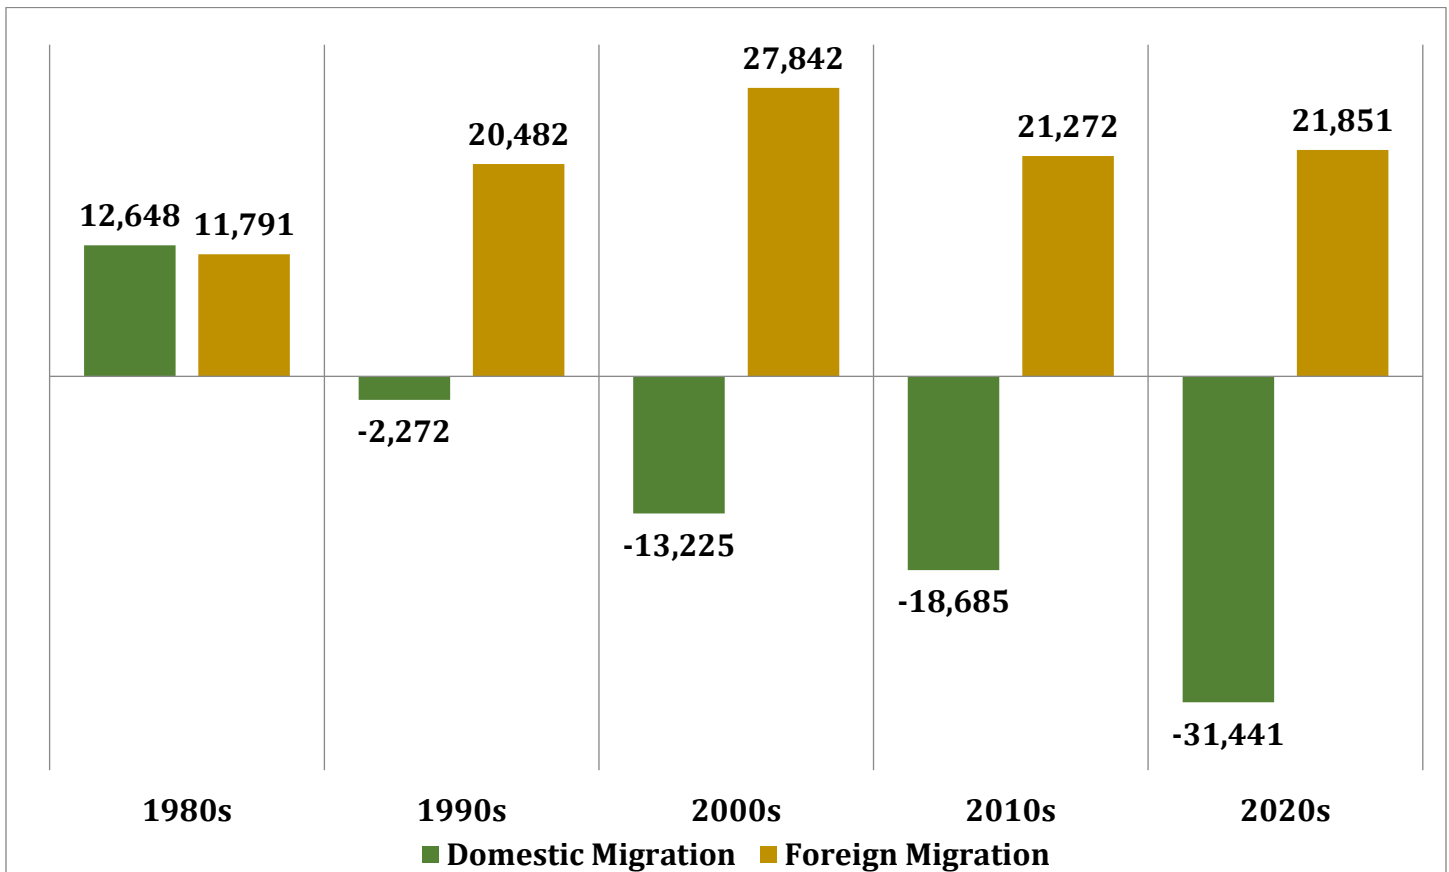

## Domestic Migration and International Migration

The potential number of students enrolled is directly related to resident recorded births (i.e., births associated with female residents in Maryland.). The number of resident-recorded births may either decrease or increase depending on net migration. Net migration is the difference between the inflows and outflows of domestic migration plus the gains from immigration.

International migration (i.e., immigration) has played a more important role in Maryland than domestic migration. International migration is the relocation of individuals and young families from their country of origin to the United States. As shown in Chart 10 below, the average number of immigrants entering Maryland increased every year from 11,791 in the 1980s to 27,842 in the 2000's. Young adults who come for study or work may bring or start families here and their school-age children add to public school enrollments.

Chart 10- Average Annual Net Domestic Migration and Immigration into Maryland

Foreign immigration data is from the decennial census (1980s and 1990s) and from the American Community Survey (2000s and 2010s). Domestic migration is calculated as a residual for the 1980s, 1990s and 2000s; from 2010 forward this data has come from the Census Bureau's components of population change, part of the Annual Population Estimates for the June 30, 2010 to July 1, 2020 & July 1, 2020 to July 1, 2023 periods.

Source: Maryland Department of Planning.

Net out-migration impacts school enrollments across public school districts: resulting in reduced or slower growth in student rolls. In the mid-2000s, net out-migration was due in part to the effects of the expanding “housing bubble”. As prices began to rise at a rapid rate, Maryland saw an increasing number of its residents move to border states (particularly Pennsylvania) where housing costs were lower. However, the collapse of the housing price bubble, along with job losses in every part of the country, curtailed out migration and as a result the state’s population increased overall. As job and housing markets improved nationally, net out domestic slowed down in the beginning part of the 2010’s. In the later part of 2010’s domestic out migration averaged around 25,000 yearly and this trend continued to increase in the 2020’s with an estimated average yearly out migration around 31,400 from 2020-2023.

Immigration may fall for a variety of reasons including governmental policies and economics. Annual international migration in the 2010s was 21,272, about 6,500 less than in the 2000s. During the pandemic, states across the country reported lower international migration numbers. However, as Covid restrictions loosened Maryland added around 56,000 international migrants from 2021 to 2023.

Chart 11- Average Total Net Migration for Maryland by Decade

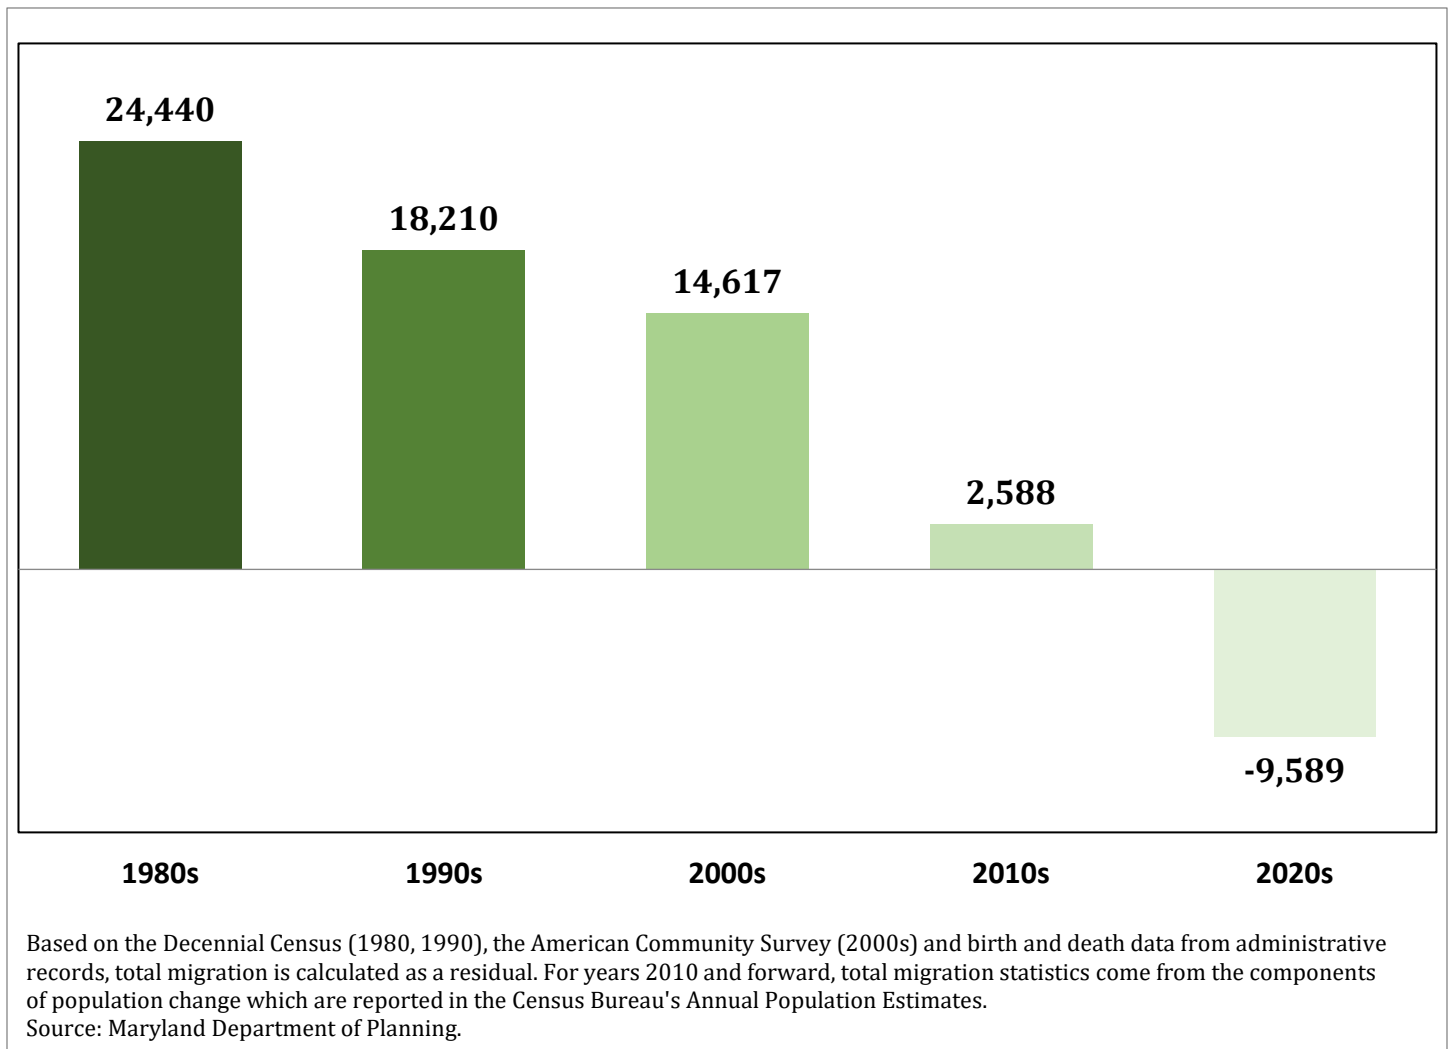

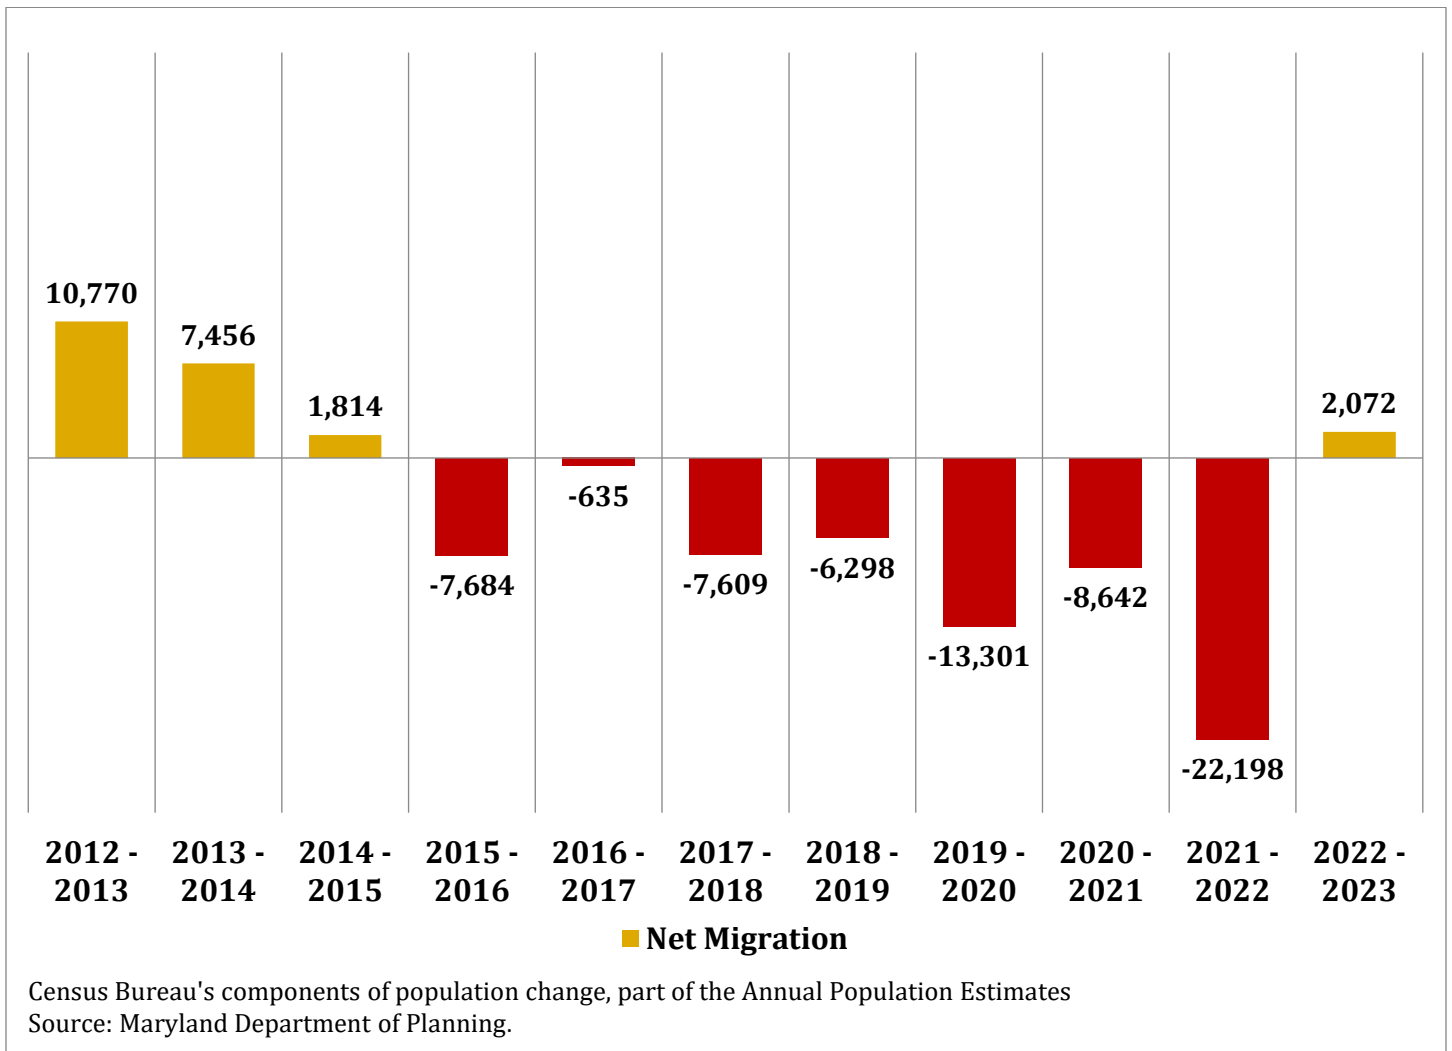

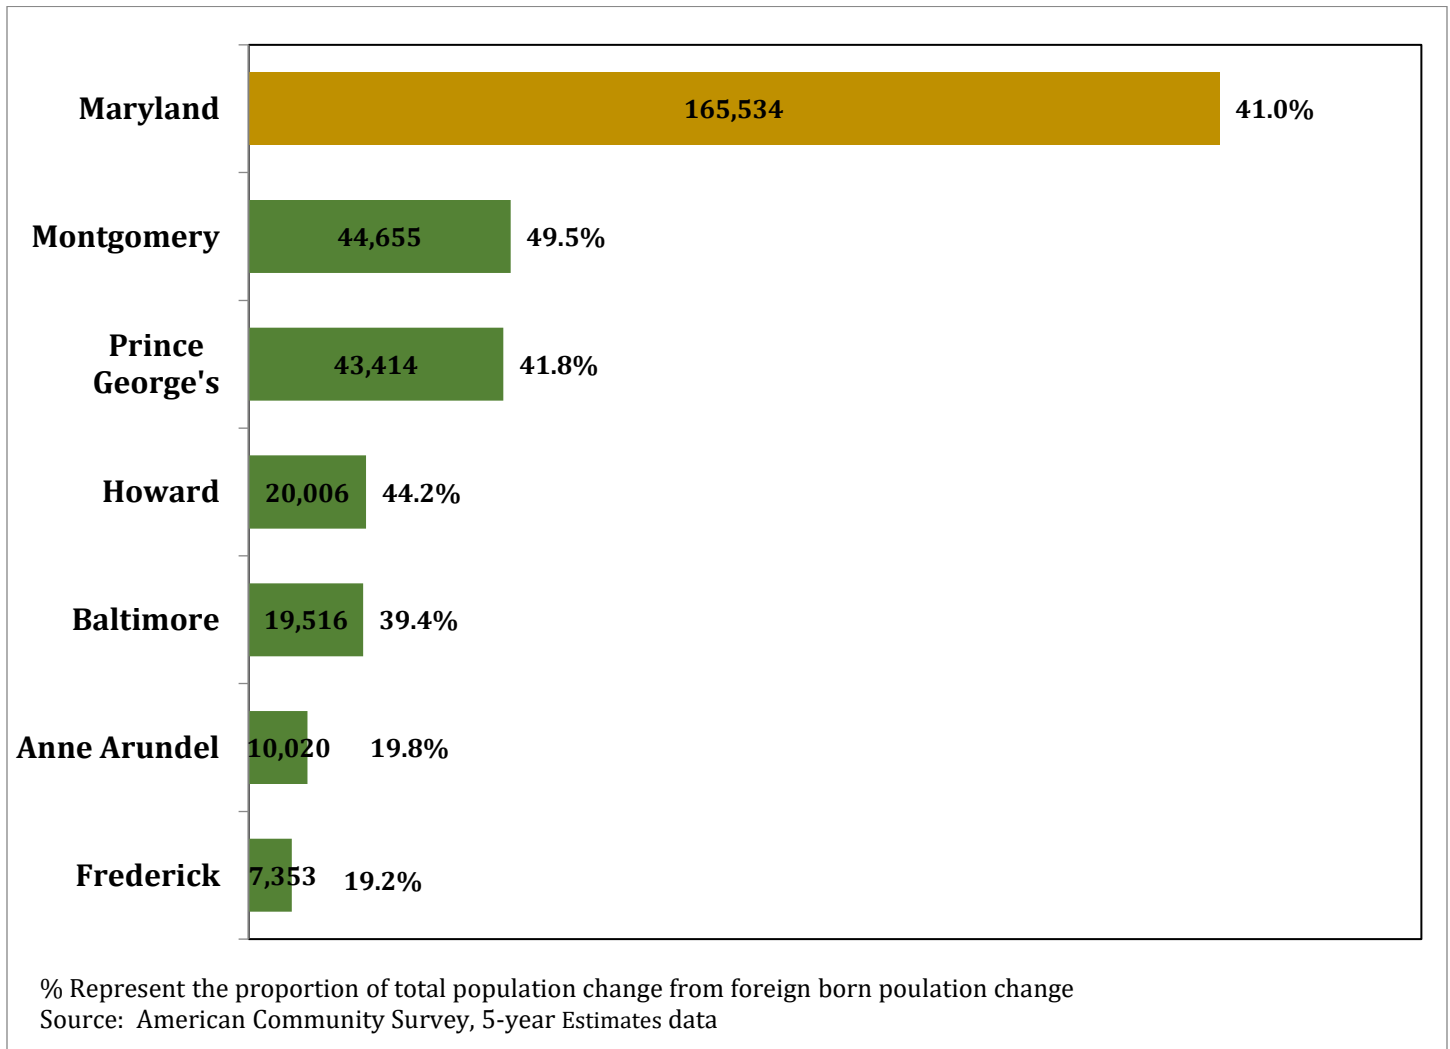

Chart 12- Maryland Net Migration Estimates July 1, 2013- July 1, 2023

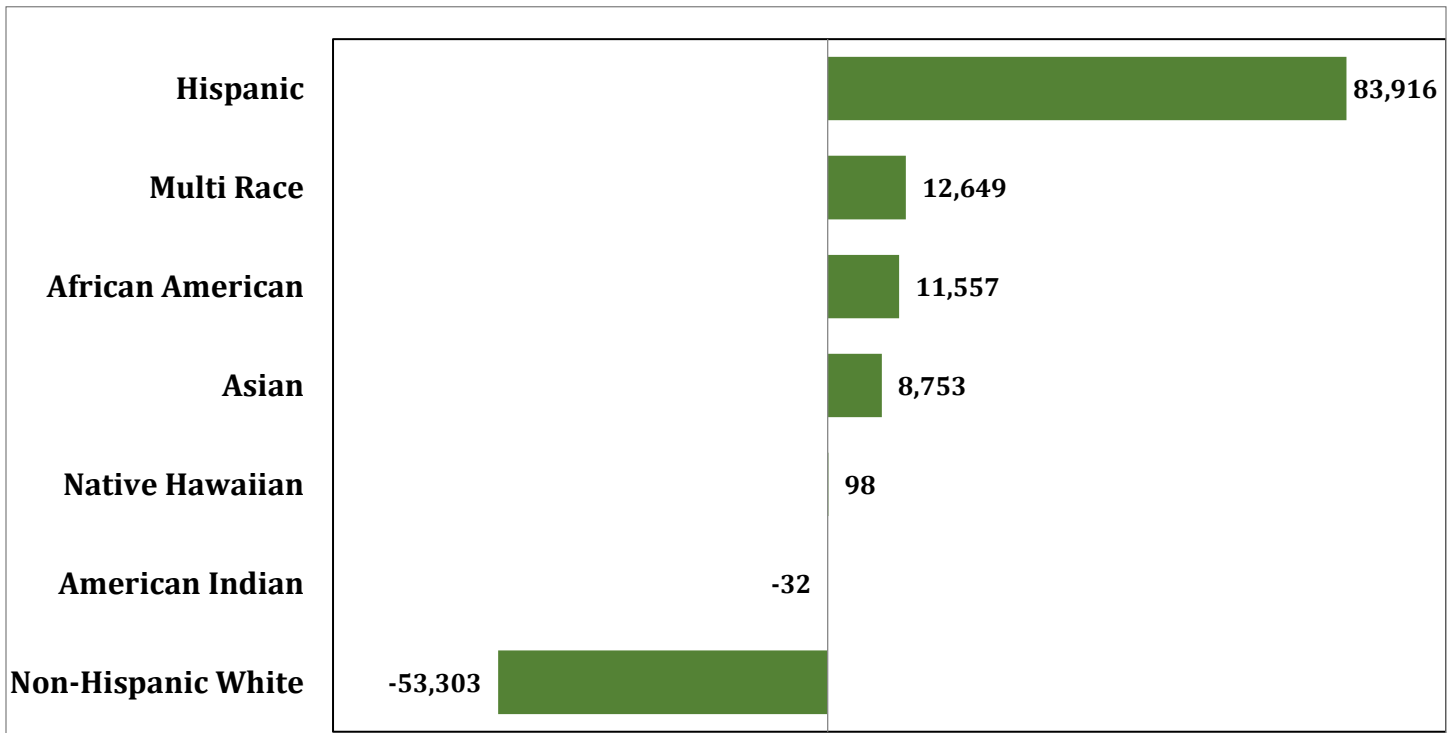

Immigrants (foreign born) have been an important source of population growth statewide since 2000. Between 2010 and 2020 the foreign-born population made up 40% of the total population growth in Maryland. The foreign born are a significant component of overall population growth for several of Maryland’s jurisdictions - 44,655 in **Montgomery County**, 43,414 in **Prince George’s County**, and 20,006 in **Howard County** (See Chart 13).

Chart 13. Counties with the Largest Increase in Foreign Born Population, 2010 – 2020

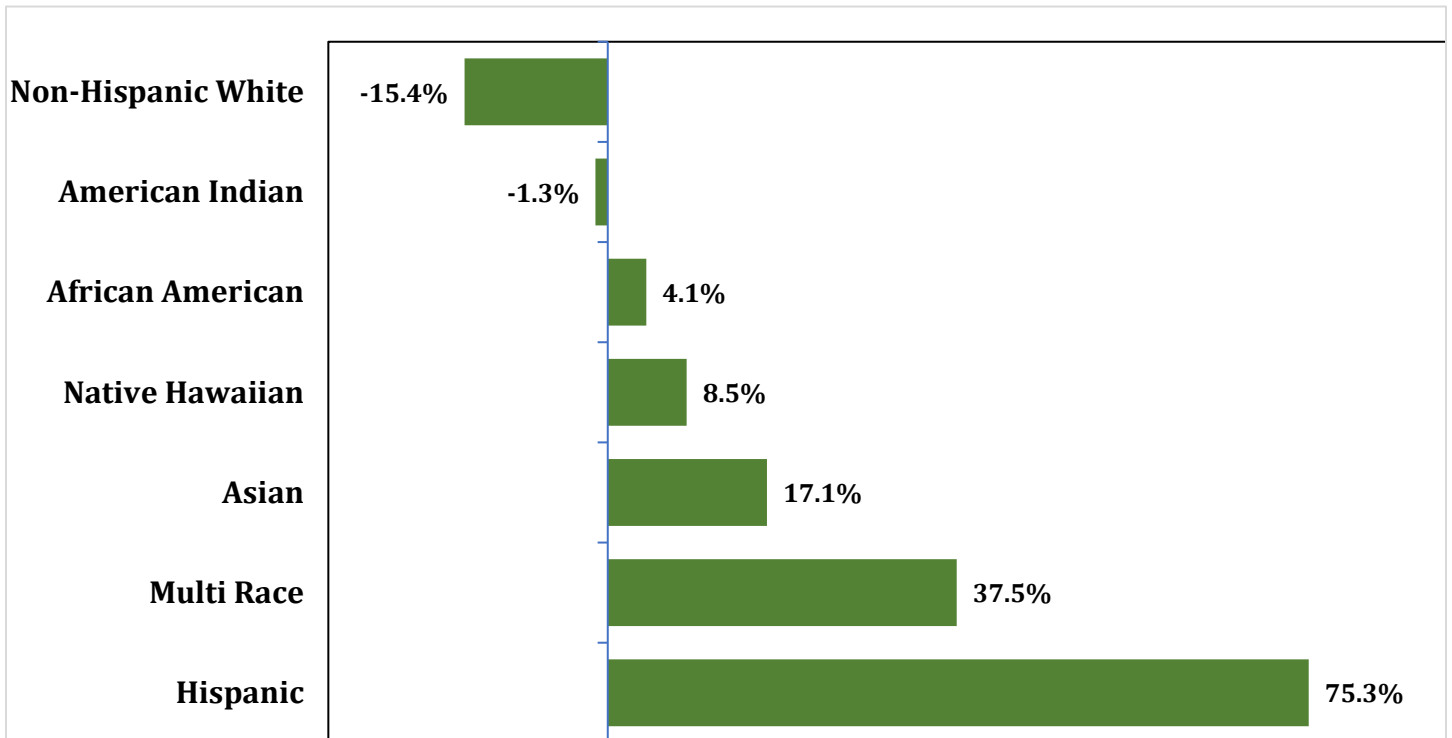

From a statewide perspective, losses in domestic migration and gains from immigration have been an important factors in increased minority enrollment. The largest gains in public school enrollment from 2013 to 2023 were among Hispanic (83,916) and multi-race (12,649) students, while non-Hispanic white enrollment declined significantly (See Charts 14 and 15). The share of non-Hispanic white students enrolled in Maryland public schools declined from 41.9 percent of total enrollment in 2013 to 32.9 percent in 2023. African American student enrollment declined by 11,557 from 2013 (33.9%) to 2023 (32.7%). In the same period, 2013 to 2023, the Hispanic share of public-school enrollment rose from 13.5 percent to 22.0 percent (See Chart 16).

Source: Maryland Department of Planning, from Maryland State Department of Education data.

Chart 15- Percent Change in Total Public School Enrollment in Maryland by Race & Hispanic Origin, 2013-2023\*

Source: Maryland Department of Planning from Maryland State Department of Education data.

Chart 16- Share of Total Public School Enrollment in Maryland by Race & Hispanic Origin, 2013 and 2023

### Intra-State Migration

Immigration has been an important source of population growth for the inner suburban counties (Montgomery, Prince George’s, and Baltimore) since the 1990s while intra-state migration, the movement of people from one Maryland county to another, has been a key element in the growth of many outer suburban and rural counties. The pattern of intra-state migration flows has typically been from the inner suburban counties to contiguous outer suburban counties and from outer suburban counties to more rural counties. For example, out-migration from **Montgomery** and **Prince George’s counties** increased total population and school enrollment in many outer suburban jurisdictions including **Calvert, Charles, and Frederick counties**. More recently the trickle-down of population continued from outer suburban counties to exurban counties, increasing populations through intra-state migration in **Washington County** (primarily from **Frederick** and **Montgomery counties**) and **Cecil County** (primarily from **Harford County**).

### Home Schooling Enrollment

The COVID-19 pandemic impacted many key components of school enrollment throughout the country. In Maryland one of the changes that is harder to quantify is projecting the share of eligible students electing to be homeschooled. Accurately forecasting the home-schooling enrollment numbers and its impacts on public school enrollment moving forward may need to be assessed, considering evolving social trends and the lack of

comprehensive data resources. The available homeschool data, starting in 2008 and current as of 2022, shows relatively consistent enrollment totals averaging 25,659 between 2008 and 2019.<sup>3</sup> Homeschooling enrollments increased significantly in 2020 with 42,632 students, an increase of 14,804 or 53.2 percent from its previous peak in 2016. Growth continued for the 2021 school year but only marginally increasing to 44,931 enrollments or 5.4% greater than the previous observed peak of 2020. The 2022 school year saw a reduction in homeschooled students totaling 39,569, 5,362 less than in 2021. Despite the 11.9% decrease in homeschooled students between 2021 and 2022, the state total for 2022 remains 11,741 or 42.2% greater than the pre-pandemic peak in homeschooled enrollments.

Previous to the COVID-19 pandemic, homeschooled students were never more than 3% of the total k-12 enrollments. However, the number of home-schooled students in the 2021 school year made up 4.5% of total enrollments. Due to the reduction in homeschooled enrollments in 2022, this now makes up 3.9% of all enrolled students in Maryland. Though it may be a small portion of the total enrollments, it may help to explain the sizable decreases seen in public school enrollment following the pandemic.

### **Public/Private Enrollment Share**

In addition to the number of births, domestic migration, immigration, and home-schooling enrollment, another important factor in determining public school enrollment is the percentage of all students that attend public versus private schools. Unfortunately, data on K through 12 private school enrollments within the last 14 years is not directly comparable to prior years or even to each other and thus it is not possible to establish an historical trend through the current school year. This inability to compare those statistics is a result of Maryland State Department of Education, which generates the non-public school enrollment data, switched to an online survey of private schools in 2008 (from a mail-out/mail-back survey) resulting in a much lower response rate than in prior years. Moreover, participation in the survey is voluntary and not subject to a thorough verification and audit process.

It is reasonable to assume that private school enrollment dropped in 2008 (and that the public share increased) due to economic hardships brought about by the Great Recession. It is, however, nearly impossible to verify the magnitude of that drop. The magnitude of the 2010-2022 decline in private school enrollment is difficult to verify due to changes in enrollment submission policy during this time, looking closer at the year-over-year change notable increases occurred in 2019 (7.0%) and 2022 (6.1%). Non-public school enrollment in 2023 marginally declined by 238 students. Since 2014 non-public school enrollment has shown an increase of 10,949.

## **Trends and Projections in Public School Enrollment by Type**

The Maryland Department of Planning's statewide and jurisdiction population and birth projections form the basis for the projected school enrollment. Growth in total enrollment is anticipated in the next two years, followed by two years of decline before continued growth through the remainder of projection period (2028 through 2033).

### **Total Public-School Enrollment**

Public school enrollment is expected to experience an increase of 3,788 between 2023 and 2025, followed by a reduction of 3,240 students from 2025 to 2027. It is projected to increase for the remainder of the projection horizon by an average annual growth of 1,977 students. The main drivers of public-school enrollments during the projection period are migration and cumulative births (the sum of births over successive 13-year periods that correspond to individual K-12 enrollment years).

---

<sup>3</sup> MSDE, Homeschooling 14-year report

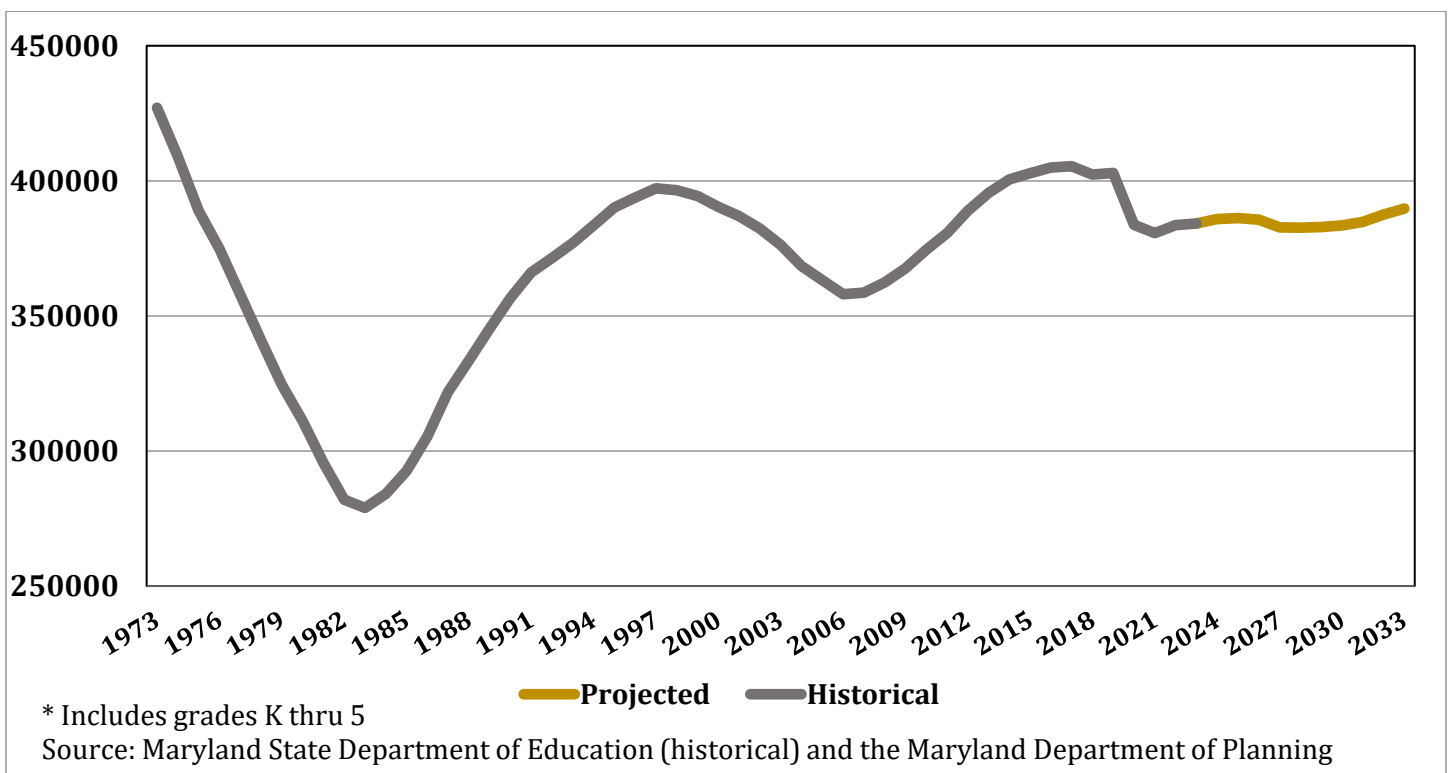

## Public Elementary School Enrollment (Grades K through 5)

Historically, between 1972 and 1983, public elementary school enrollment (grades K-5) dropped by nearly 163,300 students (-36.9%), the largest decline to date (See Chart 17). This decline in elementary school enrollment is explained by the transition from the youngest baby boomers (baby boomers are those born between 1946 and 1964 to Generation X (those born in a period of declining births, 1965-1982). Gen X was followed, in turn, by the larger baby “boomlet” (sometimes called “Generation Y,” “baby-boom echo” or more recently and perhaps finally “millennials”) resulting in a 118,300 (42.4%) increase in elementary enrollment from 1983 to 1997. Lower numbers of births after the peak in 1990 resulted in a decline in elementary school enrollment from 1998 through 2006 of nearly -39,300 (-9.9%) yielding a total enrollment of just under 358,000. Elementary enrollment began to grow again in 2007 and averaged 4,700 new students each year from 2007 to 2017, with the gain in 2012 (8,291) the largest in the state since 1991.

Elementary school enrollment decreased significantly in 2020 (-19,123), The largest reduction since 1975 (-20,120). The reduction in 2020 was linked to the COVID-19 pandemic. While all elementary grades were affected, kindergarten enrollment dropped the most (-6,696 or -10.3%). The following year, in 2021, enrollment further fell by 3,152 students. Enrollments rebounded in 2022 with an increase of 3,017 students. The growth trend continues in 2023, adding 499 enrollments from the previous year. Elementary school enrollments are projected to continue to grow marginally through 2025, increasing by a total of slightly over 2,000. Following the growth projected in the first two years of the projection period is three years of decline in elementary enrollment reducing enrollments by 3,500 between 2025 and 2028. (See Chart 3 in the Executive Summary).

The COVID-19 pandemic, birth patterns, as well as changing “K to birth” and “first grade to birth” ratios (see methodology section) all play a part in this pattern of gain-loss-gain, over the next several years. Total Elementary school enrollment is projected to reach 386,150 by 2025 and decline slightly by 2028 to 382,650. Growth is expected in each of the final five years of the projection period, reaching 389,720 by 2033.

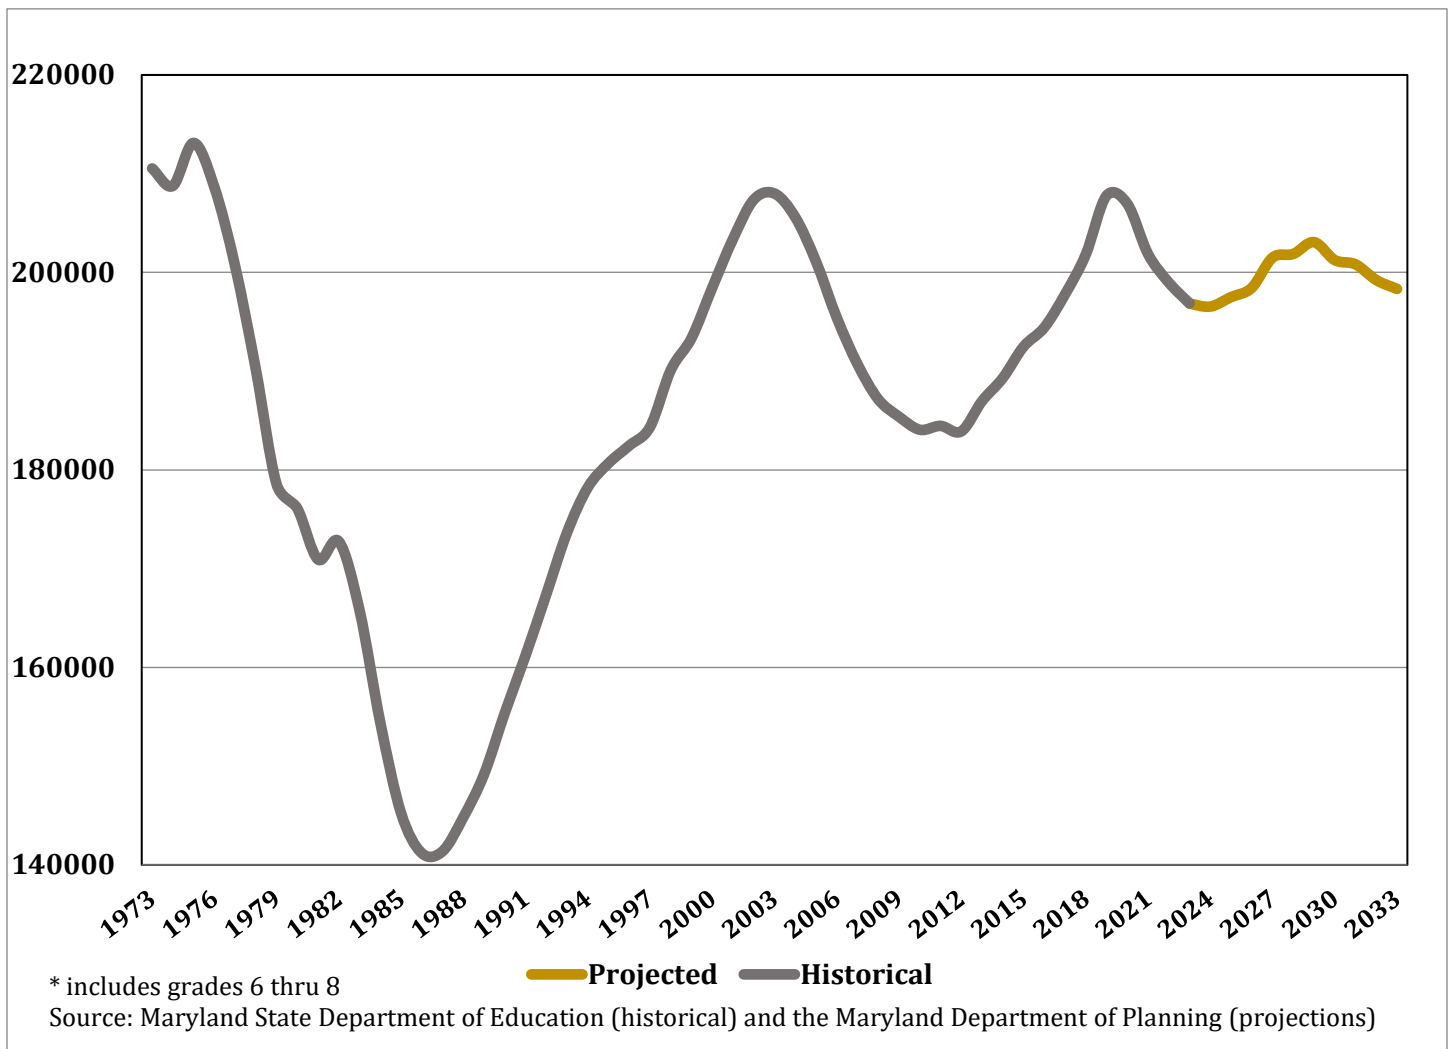

Chart 17- Public Elementary School Enrollment in Maryland, Historical and Projected, 1973 – 2033\*

## Public Middle School Enrollment (Grades 6 through 8)

Changes in public middle school (grades 6-8) enrollment follow elementary school enrollment patterns with only the age of the students accounting for the staggered trough and peak (See Chart 18). Middle school enrollments in 2019 were the highest since 1977 at 207,776, but enrollments began to fall each year, reaching 196,857 in 2023 (the last year of historical data). Enrollments have declined by 10,919 between 2019 and 2023 and are expected to decrease by an additional 317 students in 2024. However, enrollments are projected to return to a growth phase from 2025 to 2029, adding 6,530 enrollments during this projected period. The final four years of the projection 2030 to 2033, middle school enrollment is projected to decrease by an annual average of 1,185 students. The decrease in middle school enrollments from 2030 to 2033 is attributed to a decline in the number of births during the COVID-19 pandemic, leading to reduced enrollment as these birth cohorts reach middle school age.

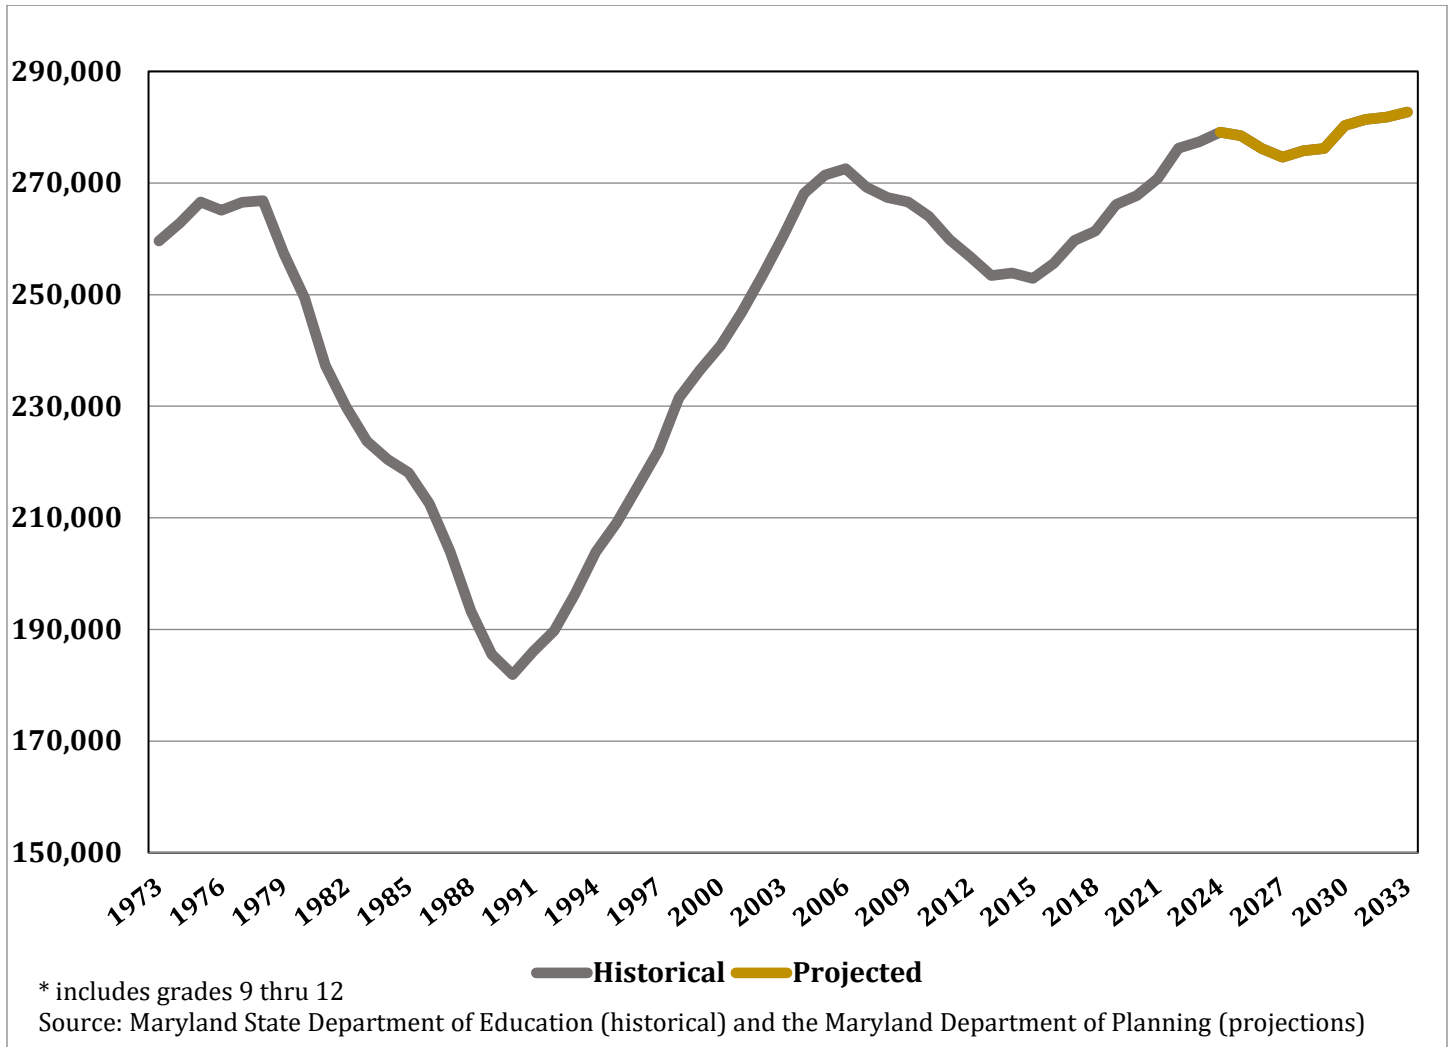

Chart 18- Public Middle School Enrollment in Maryland, Historical and Projected, 1973 – 2033\*

## Public High School Enrollment (Grades 9 through 12)

Growth in public high school enrollment (grades 9-12) is anticipated to follow the same peak-to-trough-to-peak cycle as elementary and middle school enrollments but with a shift to the right. High school enrollments are also boosted by the two-step increase in age of compulsory attendance<sup>4</sup>. (See Chart 19.). Since 2015, student enrollments have increased every year through 2023, reaching a historical peak in 2023 of 277,369.

Chart 19- Public High School Enrollment in Maryland, Historical and Projected, 1973 - 2033

Total public high school enrollment is expected to continue growing in the first year of the projection period, increasing by 1,761 in 2024. Following projected growth in 2024, three years of decline are expected, reducing enrollment by a total of 4,500 between 2025 and 2027. Despite the reduction in enrollment between 2024 and 2027, enrollment is expected to reach a new peak in 2030 and continue growth to the end of the projection horizon in 2033 (See Chart 5). Overall through the projection period, high school enrollment is projected to gain about 5,350 or 1.9%, reaching a new all-time peak high school enrollment of 282,720 in 2033.

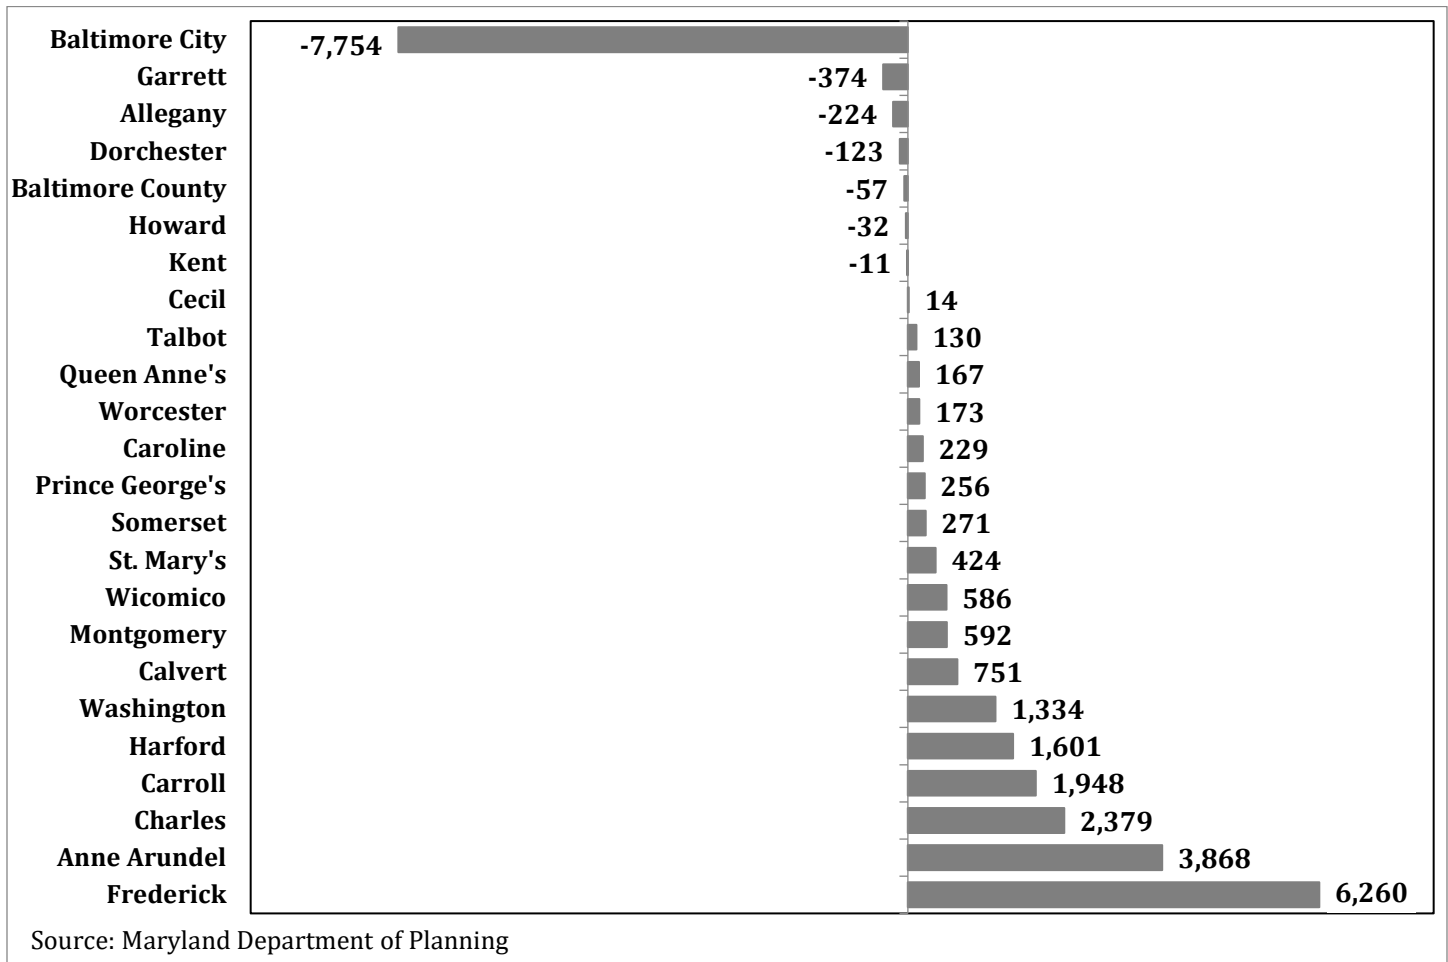

<sup>4</sup> This policy change is described further in the methodology section.

## Jurisdiction Projections over the Next 10 Years

### Total Enrollment

With statewide enrollment projected to grow over the next 10 years, more than 80% of the total statewide net gain between 2023 and 2033 is expected to occur in only six of Maryland's 24 jurisdictions - **Frederick** (6,260), **Anne Arundel** (3,868) **Charles** (2,379), **Carroll** (1,948), **Harford** (1,601), and **Washington** (1,334) counties (See Chart 20). Seven jurisdictions are expected to have lower enrollments in 2033 compared to their 2023 enrollments. The largest declines in enrollment are expected to occur in **Baltimore City** (-7,754), **Garrett** (-374), **Allegany** (-224), and **Dorchester** (-123) counties.

Chart 20- Change in Public School Enrollment by Jurisdiction, 2023 – 2033

The source of enrollment growth will vary by jurisdiction. For example, growth in **Frederick** and **Montgomery** County schools is mostly due to gains from foreign-born immigration. Two out of every three new immigrants to Maryland have moved to those counties since 2000.<sup>5</sup> At the same time, domestic outmigration from **Montgomery** and **Prince George's** counties is a major source of enrollment growth for **Frederick** and **Charles** counties respectively; these suburban counties will experience the largest and third largest numeric increases over the ten-year projection period.

<sup>5</sup> Source: U.S. Census Bureau, Population and Housing Unit Estimates program. Estimates derived from the components of population growth (2000 to 2021). International migration data presented for the state of Maryland, and Montgomery and Prince Georges counties.

 Projections (2024-2033) prepared by the Maryland Department of Planning

Intra-state outmigration from the **Baltimore** and **Suburban Washington regions**, as well as population gains from international migration, are important components of enrollment growth for the **Southern Maryland region**, particularly in **Calvert and Charles counties**. Families moving from the **Baltimore region**, primarily **Baltimore City**, as well as increases in births are the drivers for **Somerset County's** enrollment increases. **Anne Arundel County's** projected increases in student enrollments are due to increases in federal employment (e.g., the expansion of Homeland Security, National Security Agency, and the Transportation Security Administration) and intra-state migration flows primarily from **Prince George's County** and **Baltimore City**. **Howard County's** enrollment growth is largely fueled by increases in the minority population, particularly Asian and Hispanic. The county also benefits from international migration and in-migration from other Maryland jurisdictions.

**Baltimore City** experienced consecutive years of decline, losing nearly 30,700 students (-28.3%) between 1995 and 2007. Despite an increase in total enrollments from 2009 to 2013, enrollments declined from 2015-2019, slightly increased in 2020. Since 2020, **Baltimore City's** public school enrollment has continued to diminish, losing 3,146 enrollments or 4.2% between 2020 and 2023. The trend downward in enrollment is projected to continue over the next 10 years, most of these declines occurring from 2026 to 2029.

Among all jurisdictions in Maryland, **Frederick County** is projected to experience the largest percentage increase (13.6%) over the 2023-2033 period. **Somerset County** is projected to have the second-highest percentage increase (10.4%). **Charles County** is projected to have the third-highest percentage increase (8.9%), mainly due to strong overall population growth and increased births. Other counties expected to have significant enrollment gains over the projection period are **Carroll** (7.6%) and **Anne Arundel** (4.7%) counties in the Baltimore Region; **Calvert County** (5.0%) in the Southern Maryland Region; and **Washington County** (6.2%) in the Western Maryland Region. (See Chart 21 and Table 5.)

Seven jurisdictions are projected to have a decline in enrollment over the next 10 years, including **Baltimore City, Garrett, Allegany, Dorchester, Baltimore, Howard, and Kent counties**. **Baltimore City** and **Garrett County** enrollments are projected to have the largest decreases with **Baltimore City's** enrollments projected to decrease by 7,754 or 10.8% and **Garrett County** reducing by 374 or 11.5% over the projected ten years.

Chart 21- Percent Change in Public School Enrollment by Jurisdiction, 2023 – 2033

Source: Maryland Department of Planning

The projected growth in **Frederick County** over the next 10 years represents an upward trend that has lasted since the early 80's and is projected to continue. **Frederick County** hasn't experienced consecutive years of enrollment decline since the 1979-1983 school years. The enrollment growth for Frederick County, particularly in the last 10 years has been substantial, increasing by 16.7%, nearly double the second highest percent growth of Howard County at 8.6% from 2013 to 2023. Frederick County's growth in enrollment coincides with the overall population growth, increasing by 16.4% from the 2010 to 2020 Census. Frederick County is projected to continue its enrollment growth trend increasing by 13.6% over the next 10 years. The historical and projected enrollment growth in Frederick is the result of strong domestic migration patterns from the Baltimore region and Montgomery County. Frederick County had the second highest number of units authorized for construction in 2022.<sup>6</sup> Increased residential construction paired with its close proximity to the Dulles technology corridor in northern Virginia and biotech centers in Bethesda and Rockville, provide ample employment opportunities.

<sup>6</sup> U. S. Bureau of the Census. Manufacturing and Construction Statistics Division. Residential Construction Branch

## Elementary School Enrollment

Twelve of twenty-four jurisdictions in Maryland are projected to reach peak elementary school enrollments in 2033. Four counties are projected to reach their peak elementary enrollment in either 2031 or 2032. Out of the remaining eight counties, four are expected to have already peaked in 2023, and the remaining four will reach their peak in elementary enrollment between 2024 and 2026 (See Table 6).

Growth in elementary school enrollment began in 2007, for most jurisdictions, when the transition to both full-day kindergarten (2007), as well as the new age-eligibility requirements for kindergarten (2006) and first grade (2007) students were completed. Although statewide enrollment will be higher at the end of the 10-year projection period, the statewide total saw a sharp decline in both 2020 and 2021 decreasing by 22,275 during this time. The following years 2022 and 2023 saw a slight rebound adding 3,516 enrollments. Enrollment is anticipated to continue growth through 2025, with a decline returning in 2026 and continuing until 2028. Most of the growth in elementary enrollment is projected to occur between 2030 and 2033, an increase of 630 in 2030, 1,250 in 2031, 2,730 in 2032, and 2,230 in 2033.

The largest projected gains in elementary enrollment are expected in four jurisdictions - **Frederick** (2,856, or 13.9%) **Anne Arundel** (2,632 or 7.1%), **Charles** (1,026, or 9.2%), and **Carroll** (920 or 7.9%) counties. In percentage terms, the largest gains are projected to occur in Somerset (26.1%), Kent (15.8%), and Caroline (15.6%) counties.

**Baltimore City** is projected to have the largest decline in elementary enrollment over the 10-year projection period (-3,392, or -10.0%). **Howard County** is expected to have the second largest numeric decline in elementary enrollment by the end of the 10-year projection period (-2,006, or -8.2%).

Projections (2024-2033) from the Maryland Department of Planning.

## Middle School Enrollment

Middle school enrollment in the 2013-2019 period showed average annual gains of 3,400 students. The addition of 5,959 middle school students in 2019 was the largest enrollment increase in more than 25 years. However, enrollment fell during 2020 by 812 students and decreased by 5,090 students in 2021. Over the projection period, 2024-2033, five years of enrollment declines (2024 and 2030-2033) and five years of enrollment gains (2025-2029) are anticipated. The largest projected percentage increase occurs in 2027 at 1.5 percent (3,060 enrollments) and the largest projected percentage decrease occurs in 2030 at -0.9 percent (1,820). Middle school enrollment is expected to be higher in 2033 than in 2023, increasing by 1,473 or 0.9 percent over the ten-year period. (See Tables 9, 10 and 11).

Compared to 2023, 9 of the 24 jurisdictions will have lower middle school enrollment in 2033 (See Table 10). Fifteen counties will experience growth over the next ten years with the highest numeric increases in **Frederick** (1,812, or 17.1%), **Anne Arundel** (844, or 4.5%), **Carroll** (586 or 10.0 %) and **Charles** (438, or 7.0%) counties.

**Baltimore City** is expected to have the largest decline (-2,441 or -15.0%) in middle school enrollment of the nine jurisdictions that are anticipated to have declines. Losses for **Baltimore City** are projected to occur in each of the ten projected years.

Relatively large percent declines are also projected for **Garrett** (-120, or -15.4%), **Kent** (-52, or -13.6%) and **Allegany** (-133, -7.3%) counties. Each of these counties experience intervals of growth and decline throughout the projected 10-year period.

Projections (2024-2033) prepared by the Maryland Department of Planning.

## High School Enrollment

Statewide, high school enrollment has increased the past eight years following seven years of decline (2007-2015) and a small gain in 2014 (447, the first since 2006). Looking forward into the ten-year projection period, overall high school enrollment is expected to increase by 5,351 (1.9%) above 2023 levels. The 2024 total of 279,130 would represent a new peak for high school enrollment in Maryland, exceeding the 2006 peak total of 272,575 by 6,555 (2.4%). Enrollments are then projected to decline annually through 2027 (-4,500 from 2025-2027), before increasing through the end of the projection period and reaching a new statewide high of 282,720 in 2033. While fourteen jurisdictions are expected to have their largest high school enrollments by 2025 (see Tables 12, 13 and 14), most of the statewide growth is expected to occur in the last six years of the projection period. The remaining ten jurisdictions are projected to have their peak high school enrollment in the last four years of the projection period. Of those ten, seven occur in 2033.

The top five jurisdictions with the largest cumulative gains by the end of the projection period are **Montgomery (2,203, or 4.2%), Howard (1,830 or 9.9%), Frederick (1,592, or 10.6%), Prince George's (1,050, or 2.6%) and Charles (915 or 9.9%)** counties. **Montgomery County** is expected to reach peak projected high school enrollment in 2032, while **Howard, Frederick, Prince George's, and Charles counties** are expected to peak in 2033.

Fifteen counties are projected to have lower high school enrollments in 2033 than in 2023. Of those, the largest decreases are expected in **Baltimore City (-1,921, -8.8%), St. Mary's (-351, -6.5%), Cecil (-342, -7.2%), Queen Anne's (-210, -8.9%), and Garrett counties (-198, -19.4%).**

 Projections (2024-2033) prepared by the Maryland Department of Planning.

## Methodology

The methodology used in preparing the enrollment projections involves an explicit effort to use the Maryland Department of Planning’s latest age-specific population projections (December 2020) for each political subdivision to guide the selection of key parameters used to develop grade-specific school enrollment projections. Thus, the age-specific population projections provide a starting point for deriving the public-school enrollment projections.

### Population Projections

Age-specific population projections for each jurisdiction are used to assist in estimating the following parameters relevant to the school enrollment projections.

- The projected school age population (5-17 years old), and
- Projected live births

The historical relationship between the school age population (5-17 years) and total persons enrolled in school (both public and private) from the 2010 and 2020 censuses and the 2017- 2021 American Community Survey is used in conjunction with the projected school age population to project a range of total school enrollment for each jurisdiction. The historical relationship between total (includes both public and private school enrollments) and public-school enrollment is then combined with projected total school enrollment to derive a range of estimates of the projected public-school enrollment for each jurisdiction. The range (high, middle, and low) of projections of public-school enrollment based on projected school age population are subsequently used as a guide in selecting the assumptions for the public-school enrollment projections derived by the grade succession ratio methodology.

### Grade Succession Projections

The grade succession ratio methodology requires historical data for each political subdivision on the number of live births and the number of children enrolled in public schools by grade. For these projections, historical birth data for the years 1970-2021 and historical school enrollment data for the period 1975-2022 are analyzed.<sup>7</sup>

With the phase-in of older age-eligibility requirements for kindergarten beginning with school year 2003 (and first grade for school year 2004), historic birth data by month was used, starting with calendar year 1998, to derive “kindergarten-eligible births” five years hence and “first grade-eligible births” six years hence. Students entering kindergarten in the fall of 2003 must have been five by November 30, 2003. Age eligibility was raised by one month in the following three years until the 2006 school year, when students entering kindergarten were required to be age five by September 1, 2006 and age six by that date for the first grade. Thus, during the four-year phase in period (school years 2003-2006 for kindergarteners and 2004-2007 for first graders), only 11 months’ of births were eligible for each school year.<sup>8</sup>

---

<sup>7</sup> Birth data are from the Maryland Department of Health. Since 1991, these data have been derived by geocoding the birth mother’s address to the jurisdiction of residence.

<sup>8</sup> For example, for the 2006 school year beginning in the fall of 2006, eligible births for kindergarten enrollment would be for the 11 months from October 2000 through September 1, 2001.

Besides historical data on the ratios of births and associated enrollment in kindergarten and first grade, historical grade succession ratios that reflect projected grade cohort survival for all other grades, from first to second grade and from eleventh to twelfth grade, are analyzed. Specific combinations of historic ratios are then selected that generate grade-specific school enrollment projections that are consistent with the range of school age population-based projections of public-school enrollment. The resulting grade-specific school enrollment projections combine the effects of:

- Births in a given year which are eligible for subsequent kindergarten and first grade enrollment;
- Mortality for school age children;
- Net migration of school age children;
- Net transfer of children between public and private schools;
- Non-promotion of children to the next grade level; and
- Dropouts in the later years of secondary school.

The grade succession methodology consists of several computational steps. First, the ratio of kindergarten and first grade enrollment for the historical period to enrollment-eligible live births five and six years previously to enrollment are calculated for each jurisdiction. These ratios reflect recent trends in both births and migration for children entering public schools. For example, where a jurisdiction's historical ratio of kindergarten and first grade enrollment to births is significantly less than one, this reflects either net outward migration of potentially eligible enrollees or a high proportion of private school enrollment (or some combination of the two). Where a jurisdiction's ratio is significantly greater than one, this reflects a net inward migration of school age children or a lower proportion of private school enrollment (or some combination of the two).

Based on the projected births and the anticipated future relationship between births and kindergarten as well as first grade enrollment, ratios are developed for the projection period (see tables in the report for each jurisdiction titled, "Ratio Kindergarten and First Grade to Births - Historical and Projected," where the projected ratios are for the 2022-2032 period and projected births are for 2022 to 2027).

By comparing the ratios for the projected years to the historical ratios of enrollment in kindergarten to births five years previously (as well as first grade enrollment to births six years previously), specific projected ratios of enrollment in kindergarten to births (and enrollment in first grade to births) are selected (See Appendix B tables titled "Ratio Kindergarten and First Grade to Births - Historical and Projected"). Additionally, implementation of full-day kindergarten by 2007 was specifically considered in selecting kindergarten to birth ratios.<sup>9</sup>

For each jurisdiction, grade succession ratios for all other than kindergarten and first grade are calculated by grade from enrollment in the preceding year for the historical years 1983-2020. (See tables in the report titled "Grade Succession Ratios - Historical," which show in the top section of the table the grade succession ratios for each pair of years.)

---

<sup>9</sup> It is also for this reason that first grade enrollment was projected using the ratio to births as opposed to the grade succession ratio of first grade to K.

In the bottom section of these ratio tables are a series of constructed averages of two or more historical single-year ratios (e.g., average for the last two years, average last two years minus most recent year, etc.). It should be noted that, for purposes of deriving reasonably unbiased grade succession ratios, the historical enrollment in special education and ungraded classes before school year 2004 are distributed among the graded students in proportion to the number of graded students in the respective elementary and secondary grades. This procedure helps to eliminate variations in the ratios from year to year due to changes in policy and practices with respect to ungraded and special education enrollment. Beginning in 2004, all public school special education and ungraded students are assigned a grade.

Using the projected ratios of kindergarten to births and first grade to births as shown in “Ratio Kindergarten and First Grade to Births - Historical and Projected”, and the alternative grade succession ratios shown in the “Grade Succession Ratios – Historical” for grades two through twelve, alternative school enrollment projections are derived for each jurisdiction using the “grade succession” methodology. The actual grade succession ratios used for the school enrollment projections are noted at the bottom of each jurisdiction’s “Grade Succession Ratios – Historical” page.

The process of selecting the grade succession ratios for each jurisdiction is aided by the comparison of the range of population-based projections of anticipated public-school enrollment to the grade succession ratio-based projections. The selected “grade succession” projection is the one that appears most reasonable given the projections of school age population and births and the trends in public school share of total (public and private) enrollment.

The actual process of using the various succession ratios to calculate the projected enrollment by grade for each jurisdiction is relatively straightforward. The ratio of kindergarten to births and first grade to births for the projected period is multiplied by the respective eligible births five and six years previously, respectively, to arrive at projected kindergarten and first-grade enrollment for 2023-2032.

Using the selected values for the succession ratios for grades two through twelve, current enrollees (2022) and projected new enrollment in each year (including first-grade students derived by the ratio with births six years prior) are succeeded from one grade to the next for each year in the projection period.<sup>10</sup> The resulting projections of school enrollment by grade, by year, for the years 2023 through 2032 for each county and Baltimore City appear in the body of this report.

### **Adjustments for Compulsory Public School Attendance**

Beginning with the projections for 2023 to 2032, additional steps in the calculation of grade succession ratios were added to account for the passage of SB362 in the 2012 Maryland legislative session which raised the age for compulsory public-school attendance in two stages age 17 starting in July 1, 2015 and age 18 starting in July 1, 2017. Historical data on the number of dropouts by age and grade by jurisdiction were obtained from the Maryland State Department of Education for enrollment years 2009/2010 to 2020/2021. Due to the declines in the number of reported dropouts statewide, however, only data for the most recent year (2020/2021) of this five-year

---

<sup>10</sup> The kindergarten (and first grade) enrollment in “Ratio Kindergarten and First Grade to Births - Historical and Projected” include ungraded and special education enrollment prior to school year 2004 based on the distribution of these enrollment figures as shown in the “Grade Succession Ratios – Historical” tables.

period was used.

The following assumptions and processes are used to account for the change in the age for compulsory public-school attendance:

- The number of 2021/2022 dropouts (by age and grade) that no longer would be eligible to drop out with the new law are put back into the grade from which they dropped out.<sup>11</sup>
- Each year, the 2022/2023 dropouts are added to each grade. Each succeeding year, the dropouts are carried forward with the following assumptions:
  - In the succeeding year, if they remain ineligible to drop out, assume 85 percent “succeed” to the next year
  - If they are now eligible to drop out, assume 50 percent do. Each additional year, each succeeding cohort is reduced by one-half; and
  - Cohorts are succeeded to age 19. Afterwards they are eliminated.
- A matrix of total dropouts is added by year out to the latest projection year.

Note that the dropouts derived by the method described above are added in after the grade succession results. Thus, the dropouts are not subject at any time to the grade succession ratio process that applies to the rest of the enrollment. Accounting for the increased age of compulsory public-school attendance results in an increase in high school enrollment by the last year of the projection period of just under two percent.

---

<sup>11</sup> It was assumed that 2.5 percent of the dropouts would qualify for the exemptions under the law and would still have dropped out. In other words, 97.5 percent of the dropouts were added back into the appropriate grades.

## Organization of Detailed Data Tables

This report includes three Appendices containing statistical tables on historical and projected enrollments. Appendices A and B include detailed enrollment tables by grade for the state of Maryland and its 24 jurisdictions (Baltimore City and the counties) respectively. Appendix C summarizes by jurisdiction the historical total, public and private school enrollments from 2011 through 2022 as well as the projected public-school enrollments from 2023 -2032.

The figure below lists the detailed data tables and their availability by Appendix.

Summary enrollment figures for elementary (grades K through 5), middle (grades 6 through 8), and high (grades 9 through 12) schools also appear at the bottom of each of the first four tables along with a summary total of all secondary enrollment (grades 6 through 12).

The historical grade succession ratios for grades 9 through 12 do not reflect adjustments made to account for increases in the compulsory age for public-school attendance to age 17 starting on July 1, 2015 and to age 18 starting on July 1, 2017. See the Methodology section for an explanation of how adjustments to grade-succession derived enrollments were adjusted.
