Foreword

This report is an update of the Maryland Department of Planning's (MDP) annual report on public school enrollment statistics.

The report provides projections of public-school enrollment through 2034 by grade for each of Maryland's 24 jurisdictions (23 counties and Baltimore City). Statistics on actual total and public-school enrollment for 2014-2024 are also included.

The public-school enrollment projections utilize MDP's population projections by age and sex for each jurisdiction. The population projections are used to derive the school-age population (persons 5-17 years of age) and projected births. These projections are then used in conjunction with a "grade succession" methodology to derive the ten-year, grade-specific enrollment projections.

A preliminary set of enrollment projections and supporting materials documenting the projection methodology was previously sent to each School Superintendent and facility planner.

Appendix C: Summary of School Enrollment by Jurisdiction

Executive Summary

Statewide Totals

Maryland's total public-school enrollment increased in 2024 by 721 students following a decrease of 488 in 2023. Leading up to the pandemic, school enrollment showed strong growth between 2011 and 2019, with Maryland's public-school enrollment increasing by 51,882 (6.3 percent). These gains are attributed mainly to increases in births, international migration, and new housing construction. However, during the COVID-19 pandemic, enrollment fell by a total of 23,503 students in 2020 and 2021.

Chart 1 – Historical Annual Change in Total Public-School Enrollment in Maryland, 2014-2024

* Grades K thru 12
Prepared by the Maryland Department of Planning
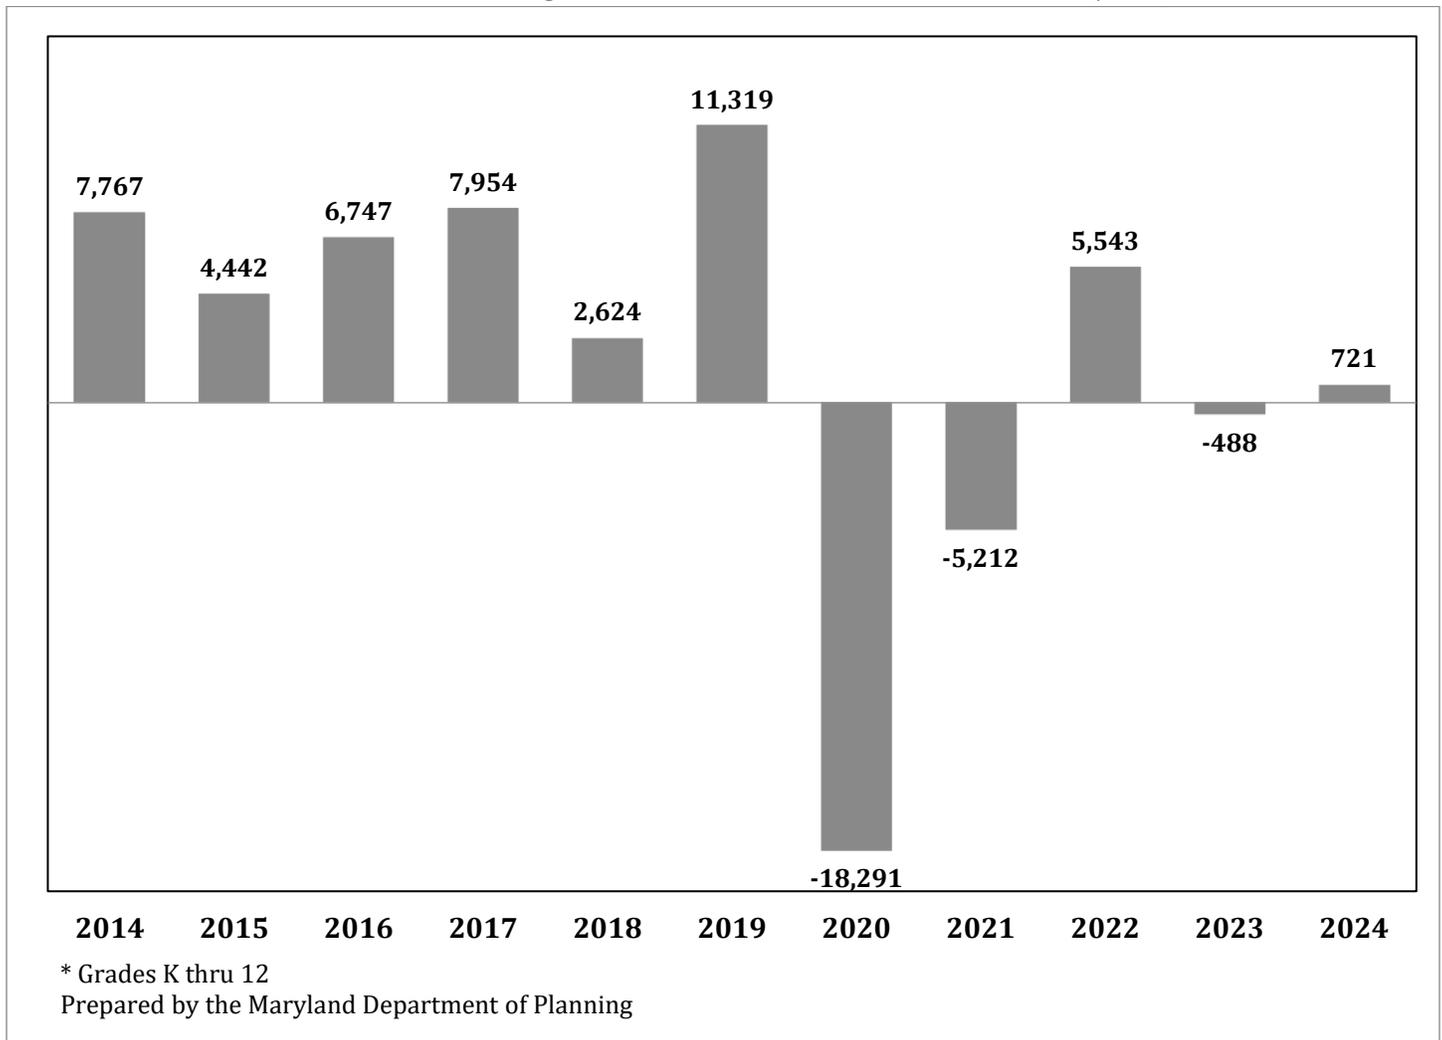

The Maryland Department of Planning (MDP) projects public school enrollment for the next 10 years (2025-2034). Enrollment is expected to increase in 2025, followed by a year of modest decline in 2026. However, school enrollments are projected to increase each year from 2027 through the end of the projection period in 2034.

Public-school enrollment is projected to increase by 15,067 (1.8%) from 2024 to 2034 (see Chart 2). Annual increases in enrollment are expected every year except 2026. Total enrollments are expected to peak at 874,150 in 2034, the last year of the projection horizon (See Table 1).

Enrollment numbers are rounded to the nearest tenth

Projections (2025-2034) prepared by the Maryland Department of Planning

Elementary school enrollment (grades K through 5) is projected to increase in five of the next ten years. Enrollments are likely to experience declines from 2027 to 2031. These are attributed to a decrease in the number of births during the COVID-19 pandemic. However, over the projection period through 2034, enrollments are expected to increase by 2,524 (0.7%) compared to the historical 2024 enrollments. The largest yearly increase in K-5 enrollments is expected to occur in 2025 with an increase of 3,434 (0.9%).

Chart 3- Projected Annual Change in Public Elementary School Enrollment in Maryland, 2024 – 2034 *

2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034
30	3,434	550	-850	-1,140	-1,190	-2,060	-920	1,680	550	2,470

* Grades K thru 5
Source: Maryland Department of Planning
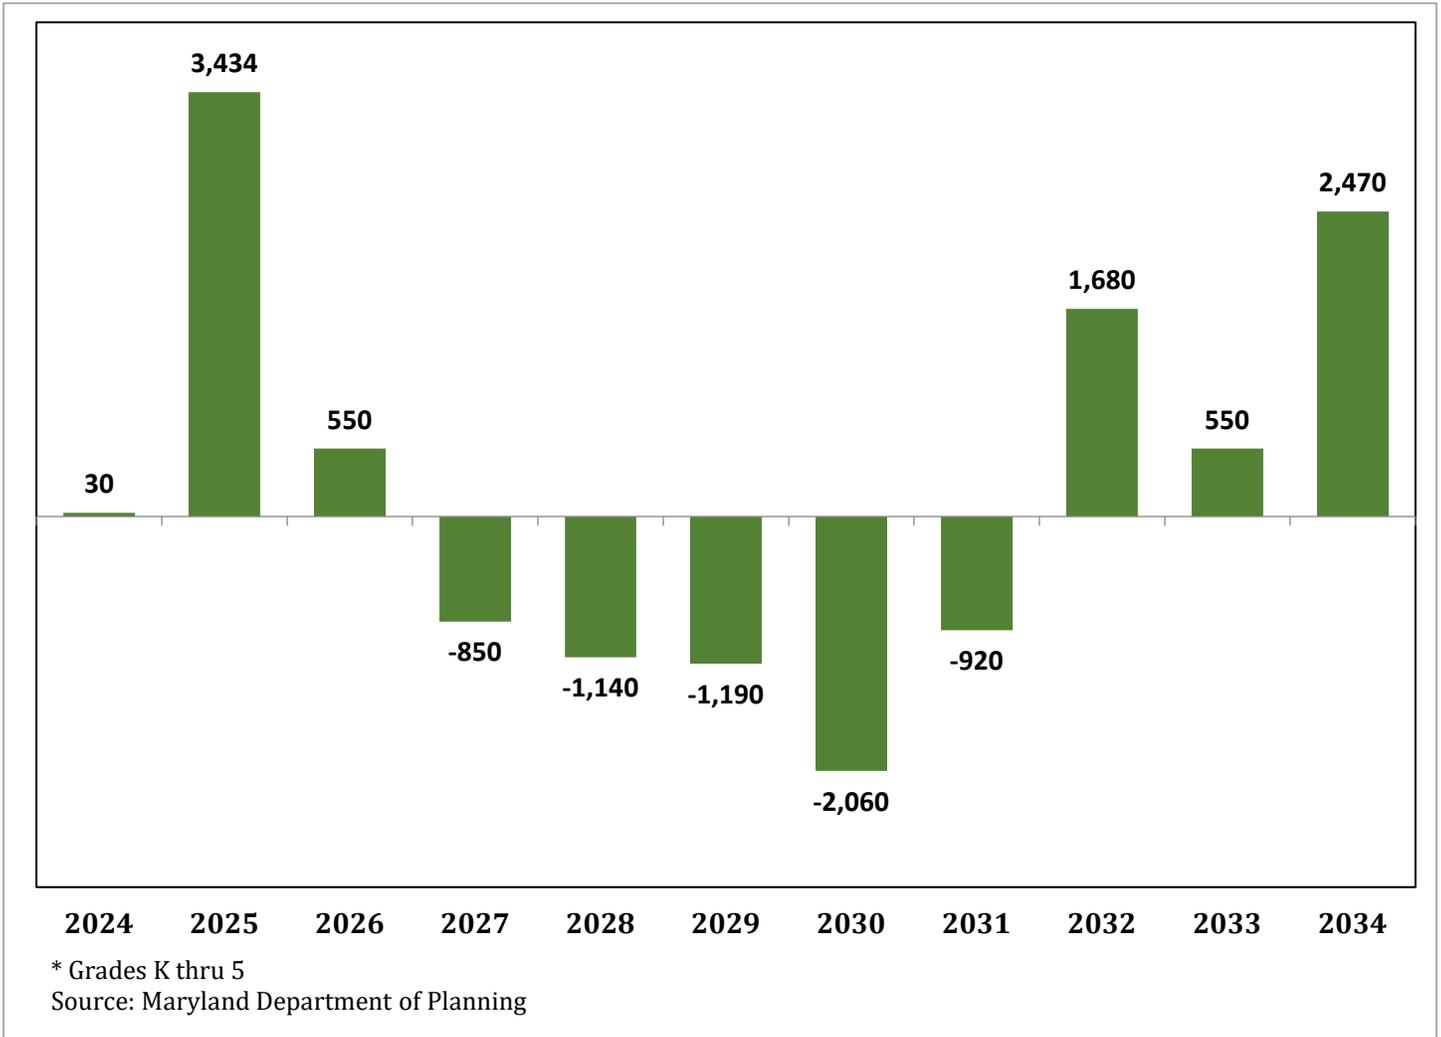

Middle school enrollment (grades 6 through 8) from 2024 to 2034 is projected to increase by 4,652 (2.4%). As shown in Chart 4, there are more years of projected enrollment growth than decline. Growth from 2025 to 2031 is expected to add 8,782 middle schoolers. The final three years, a decline of 4,130 is projected. Increases in school enrollments, now and in the future, depend mostly on the number of child births and the movement of new families with young children. Both nationally and statewide, the trend is towards fewer births.

Chart 4- Projected Annual Change in Public Middle School Enrollment in Maryland, 2024-2034*

* Grades 6 thru 8
Source: Maryland Department of Planning
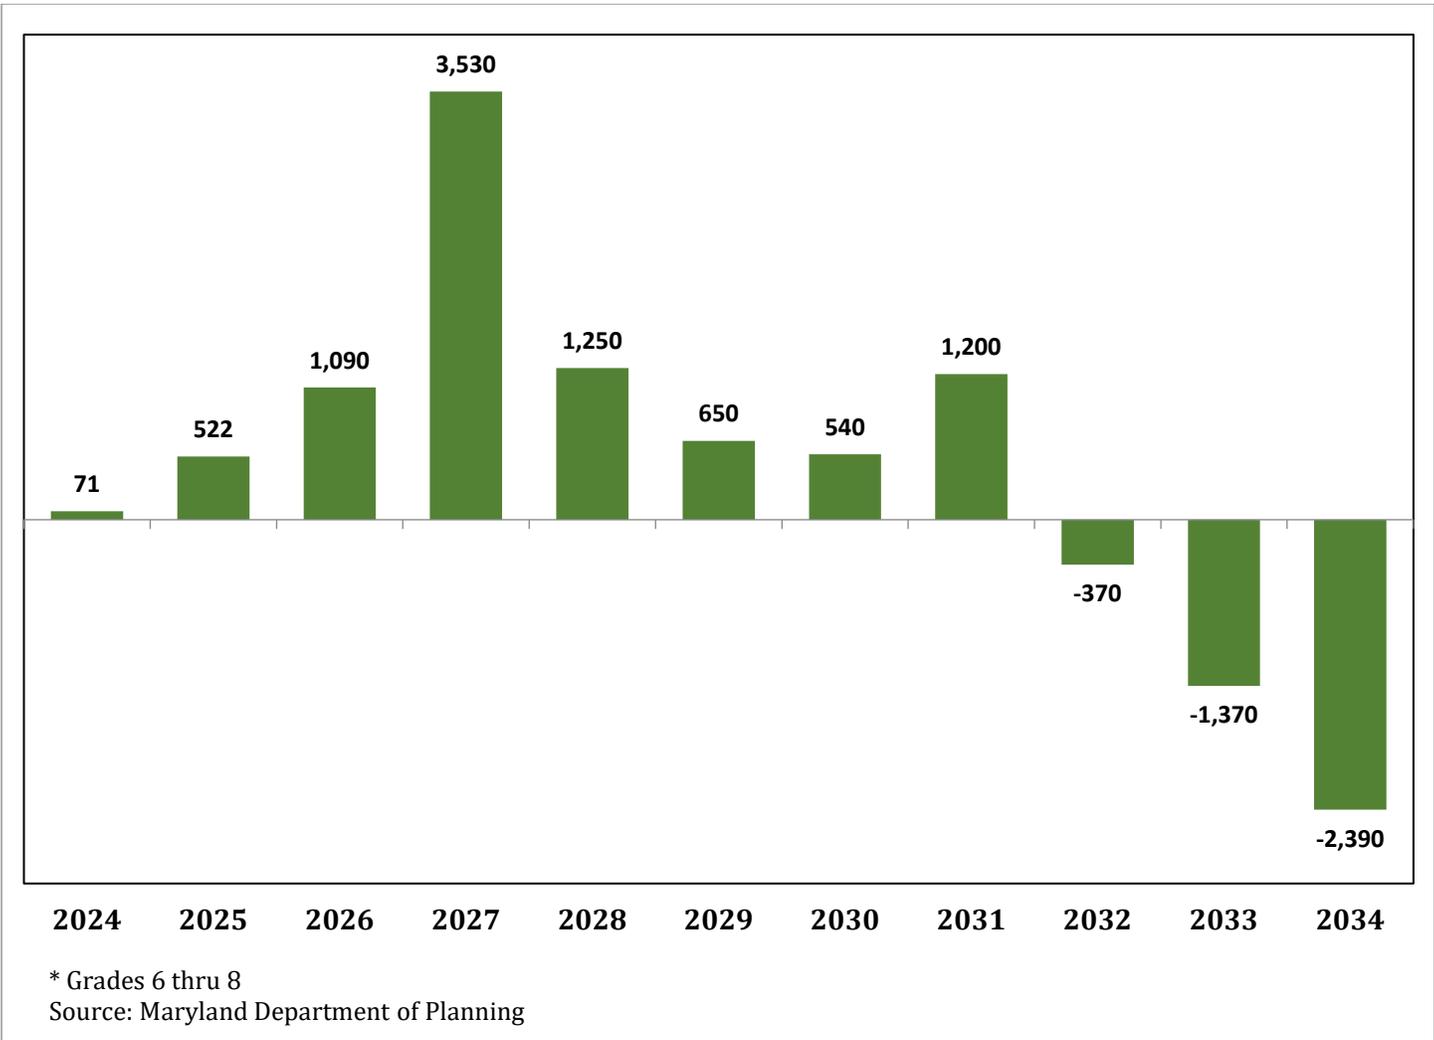

High school enrollment (grades 9 through 12) is projected to increase by 7,891 (2.8%) from 2024 to 2034, with peak enrollment occurring in 2034. Despite overall growth throughout the projection period, declines in enrollments are expected from 2025 to 2027. Growth is expected to be strongest in 2030 and 2033, increasing by a total of 7,810 enrollments during these years. (See Chart 5.).

Jurisdiction Trends

Nineteen of Maryland's 24 jurisdictions are expected to have larger total enrollments in 2034 compared to 2024. The largest numeric increases are anticipated for **Frederick** (7,042)**, Charles** (2,155), **Harford** (1,934) and **Carroll** (1,831) **counties. T**he largest percentage increases are expected in **Frederick** (15.2%), **Somerset** (8.8%), **Charles** (8.0%) **Carroll** (7.1%), and **Harford** (5.3%) **counties** (See Table 2.)

Frederick (2,810), **Anne Arundel** (1,089)**, Harford** (837), **Wicomico** (571), and **St. Mary's** (544) **counties** are expected to have the five largest numeric increases in elementary enrollment by 2034. Seven jurisdictions are expected to have lower elementary enrollment in 2034 than in 2024, with the largest decline in **Howard** (-2,648 or -10.9%), followed by **Baltimore City** (-2,492 or -7.3%) and **Prince George's** (-646 or -1.1%) **counties.** The largest percentage increases for elementary school enrollment are expected in **Somerset** (23.7%), **Kent** (15.7%), and **Frederick** (13.6%) **counties**.

Frederick (2,133), **Baltimore** (1,049), **Carroll** (818), **Charles** (759), and **Anne Arundel** (699) **counties** are expected to have the five largest numeric increases in middle school enrollment by 2034**.** Ten jurisdictions are expected to have lower middle school enrollment in 2034 compared to 2024, with the largest declines projected for **Baltimore City** (-838), **Prince George's** (-670), and **Montgomery** (-637) **counties.**

Nine jurisdictions are projected to have higher high school enrollment in 2034 compared to 2024. The five largest numeric increases in high school enrollment over the projection period are in **Prince George's** (2,516), **Frederick** (2,099), **Montgomery** (1,750), **Howard** (1,612), and **Charles** (1,134) **counties**. Four of the five jurisdictions projected to have the largest high school enrollment gains are expected to hit peak enrollments in 2033. Charles County is projected to have its peak high school enrollment in 2034. The remaining counties with increases in high school enrollment through the projection period (**Carroll**, **Harford**, **Washington**, and **Anne Arundel counties)** are anticipated to reach peak high school enrollments in the last three years of the projection period.

The largest percentage increases in high school enrollment are projected for **Frederick** (13.9%)**, Charles** (12.0%)**, Carroll** (10.8%), **Howard** (8.7%)**,** and **Prince George's** (6.2%) **counties.** Fifteen jurisdictions are projected to have a decline in high school enrollments in 2034 compared to their 2024 enrollments. The largest reductions in high school enrollments are projected to occur in **Baltimore City** (-1,225, -5.6%), and **Baltimore** (-460, -1.3%), **Cecil** (-240, -5.2%), and **Garrett** (-190, -18,6%) **counties.**

Projections (2025-2034) prepared by the Maryland Department of Planning

Long-Term Statewide Demographic Perspective

Maryland's public-school enrollments across all grades have been affected by the pandemic in both the short and long term. Chart 6 shows historical and projected public school enrollment, statewide. The longest span of increasing enrollment was 18 years between 1986 and 2003. Enrollments also increased over ten years from 2009 to 2019. The largest number of students enrolled in Maryland schools since 1975 was 876,810 in 2019. Enrollments from 2019-2021 declined by 23,503 (-2.7 percent) while the number of children enrolled in homeschooling programs increased by 61.9 percent (+17,177 students).

Public-school enrollments rebounded slightly in 2022, increasing by slightly over 5,500 students following the COVID-19 pandemic, while the number of homeschooled enrollments declined by nearly 5,400. In 2023, public schools experienced a marginal decline of 488 enrollments. Most recently, in 2024, a modest increase of 721 enrollments occurred. Growth in enrollment is projected to occur in 2025 before a slight decline (of 110) in 2026. Enrollments are projected to increase in each of the remaining eight years of the projection period ending in 2034. Between 2027 and 2034, an average yearly increase of 1,585 students is anticipated, ending with a fifteen-year high enrollment of 874,150 in 2034.

Chart 6- Total Public-School Enrollment in Maryland, Historical and Projected, 1974–2034*

* Includes K thru 12
Source: Maryland State Department of Education (historical) and the Maryland Department of Planning (projections)
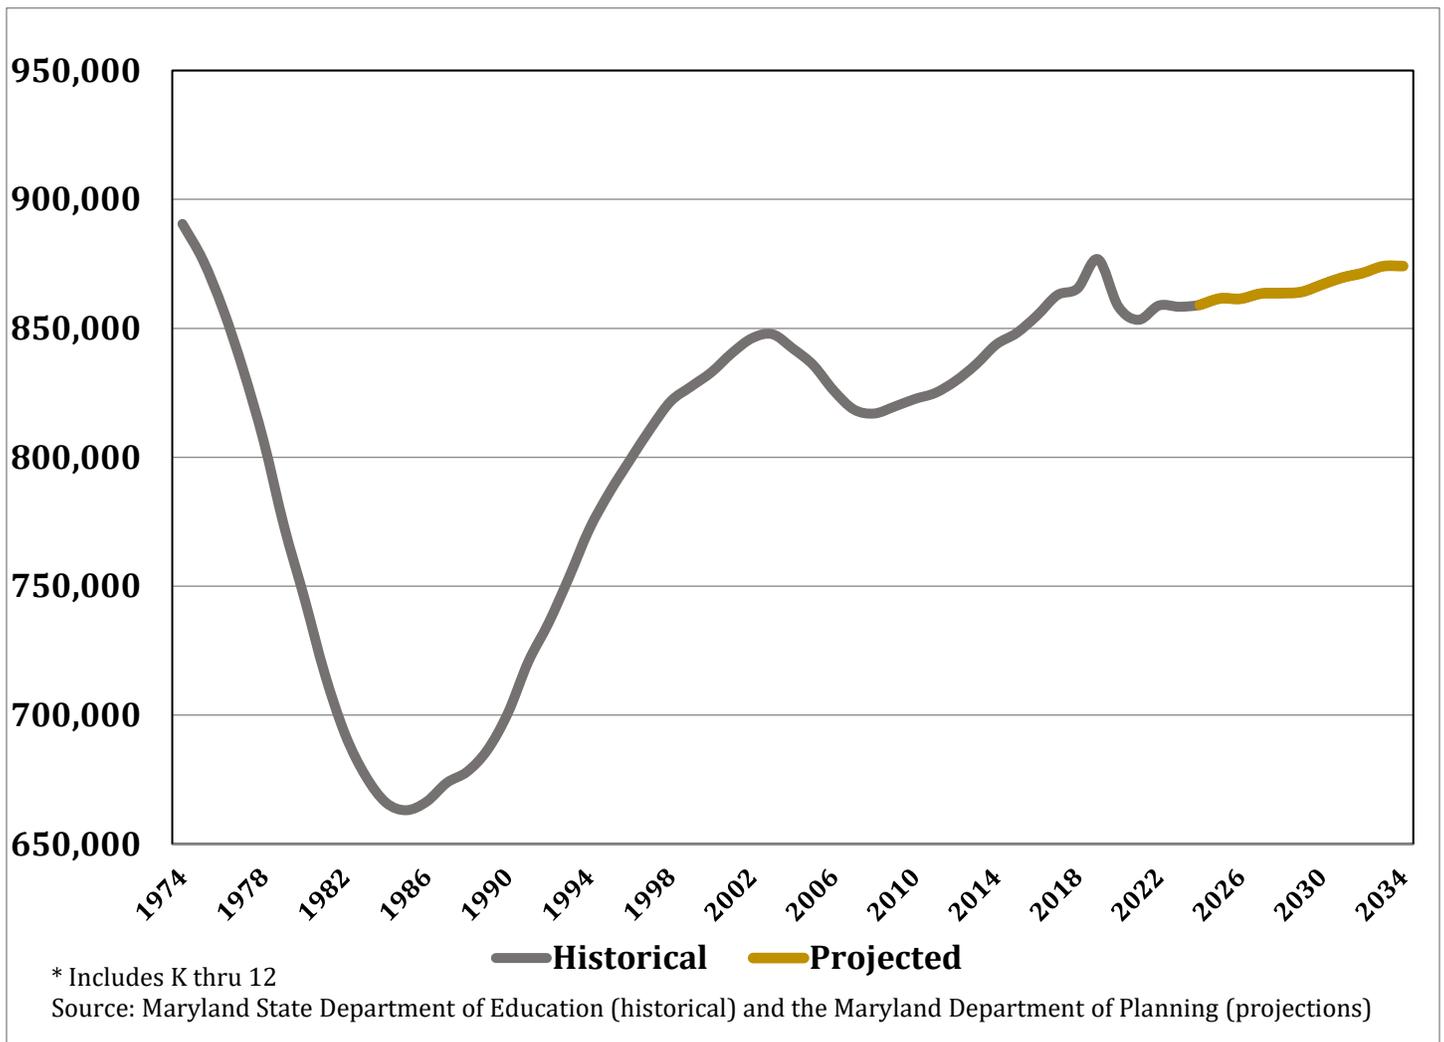

Births

Nationally, fertility rates have been declining and dropped precipitously during the years of the pandemic (2020-2021). Total births in 2021 were the lowest since 2001 in Maryland. Births rebounded slightly in 2022, increasing by 1,619 compared to 2021. Historically, births have been the most reliable measure of school patterns within the state. The number of births in Maryland began to decline after 1964, the peak year of the baby boom. The downward trend bottomed out in 1976. As births steadily increased, 1990 marked the new peak with 80,199 births. Echoing the Baby Boom, 1990 peak births (80,199) exceeded the 1964 peak (79,003) by almost 1,200 newborns. (See Chart 7) The difference in the total number of births between the 1976 low and the 1990 high is dramatic, as 27,527 more births were recorded in 1990 than in 1976, a 52.3% increase. Births declined from the 1990 peak to a low of 65,792 in 1998, a drop of just over 14,400, then generally rose until peaking again in 2007 at just over 78,000. The total number of births began to decline once again in 2008 with the advent of the Great Recession. Between 2008 and 2013, there were nearly 5,600 fewer births, followed by a slight uptick (+1,629) over the next two years. Relatively slow job growth since 2016, compounded by the effects of the pandemic, has resulted in decreased births and birth rates[1].

---

[1] Economic downturns and periods of economic uncertainty tend to reduce overall fertility rates.

Chart 7- Total Births in Maryland, Historical and Projected, 1941 – 2029

Source: Maryland Department of Health (historical) and Maryland Department of Planning (projections)
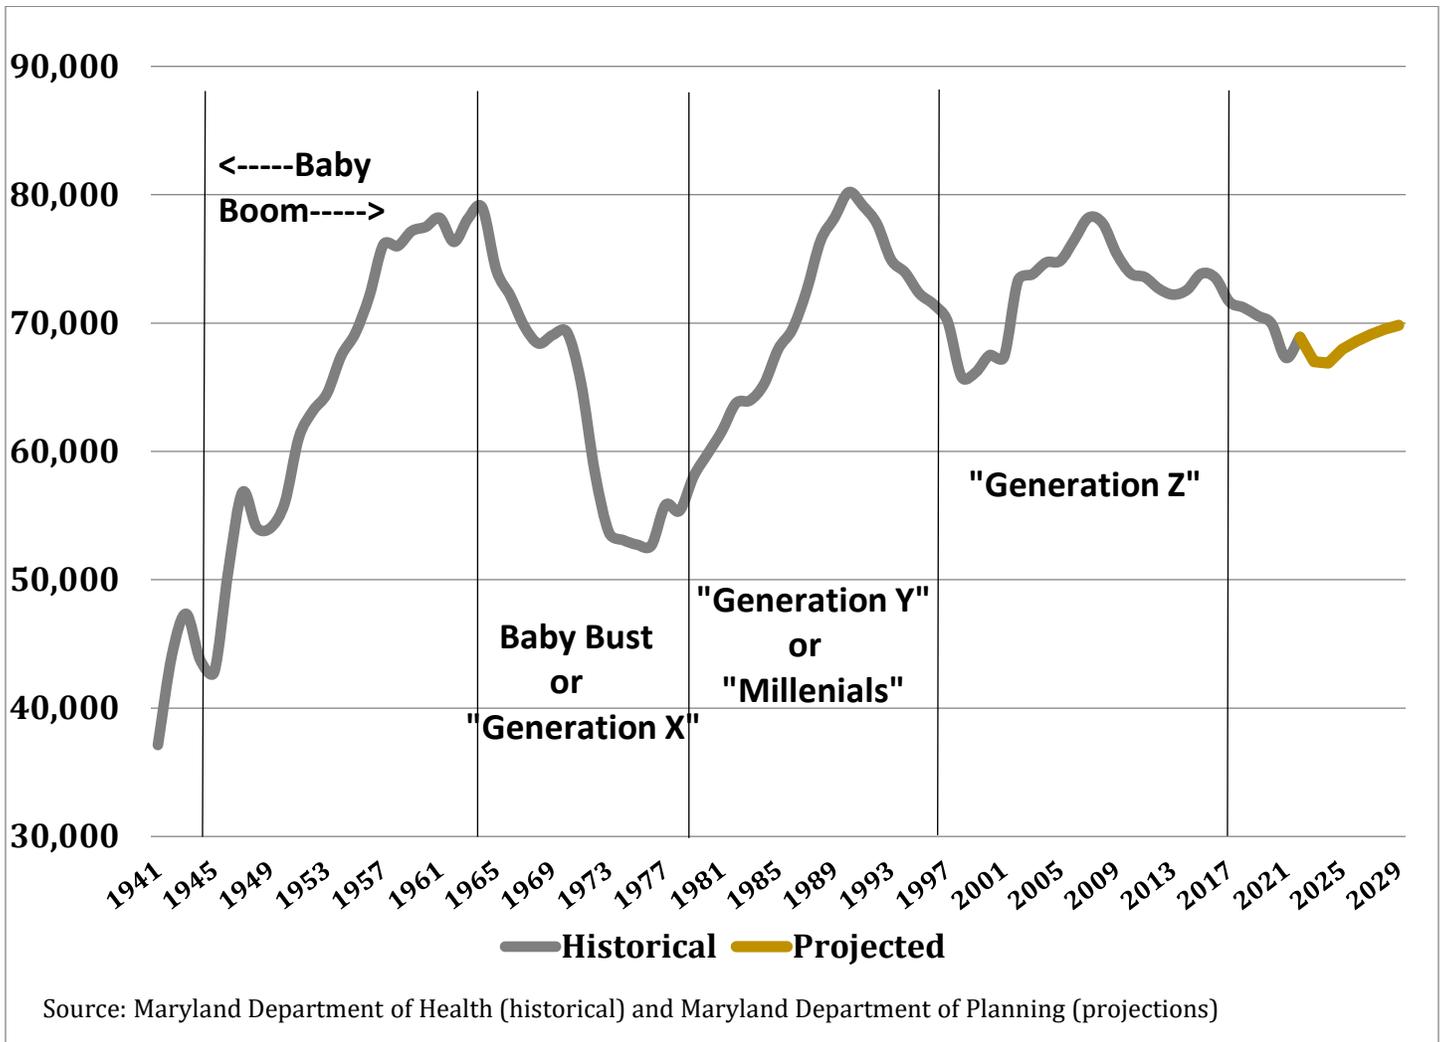

More important than births in any one year is the cumulative number of births over a 13-year period, which constitutes the potential enrollment pool for grades K through 12 in a specific school year. Cumulative births by year (those who are roughly between the ages of 5 and 17 for any given school year) reached a low point in 1989 at just under 754,200 and peaked at 964,526 in 2002 (a difference of more than 210,000) (See Chart 8). Cumulative birth totals then declined by slightly over 38,000 between 2002 and 2010. Growth in cumulative births returned in 2011 and continued to increase through 2020, adding nearly 44,000 births during this time. However, cumulative births have declined since 2020 and are projected to continue declining through the remainder of the projection horizon. Cumulative births are expected to be 898,450 in 2034 (See Chart 9).[2]

---

[2] All cumulative birth totals have been adjusted to account for the changing kindergarten age eligibility requirements that were phased in between 2003 and 2006.

Domestic Migration and International Migration

The potential number of students enrolled is directly related to resident recorded births (i.e., births associated with female residents in Maryland). The number of resident-recorded births may either decrease or increase depending on net migration. Net migration is the difference between the inflows and outflows of domestic migration plus the gains from immigration.

International migration (i.e., immigration) has played a more important role in positive population growth in Maryland than domestic migration. International migration is the relocation of individuals and young families from their country of origin to the United States. As shown in Chart 10 below, the average annual number of immigrants entering Maryland increased from 11,791 in the 1980s to 38,240 r in the 2020s. Young adults who come to study or work may bring or start families here, and their school-age children add to public school enrollments.

Chart 10- Average Annual Net Domestic Migration and Immigration into Maryland

Foreign immigration data is from the decennial census (1980s and 1990s) and from the American Community Survey (2000s and 2010s). Domestic migration is calculated as a residual for the 1980s, 1990s and 2000s; from 2010 forward this data has come fom the Census Bureau's components of population change, part of the Annual Population Estimates for the April 1, 2010 to July 1, 2020 & July 1, 2020 to July 1, 2024 periods.
Source: Maryland Department of Planning.

Net out-migration impacts school enrollments across public school districts, resulting in reduced or slower growth in student enrollments. In the mid-2000s, net out-migration was due in part to the effects of the expanding "housing bubble". As prices began to rise at a rapid rate, Maryland saw an increasing number of its residents move to border states (particularly Pennsylvania) where housing costs were lower. However, the collapse of the housing price bubble, along with job losses in every part of the country, curtailed out migration and as a result the state's population increased overall. As job and housing markets improved nationally, net domestic out migration slowed down in the beginning part of the 2010s. In the later part of the 2010's domestic out migration averaged approximately 25,000 per year. While this trend continued into the 2020s, annual domestic out migration has moderated in recent years, declining to 18,509 in 2024.

Immigration may fall for a variety of reasons, including governmental policies and economics. Annual international migration in the 2010s was 21,272, about 6,500 less than in the 2000s. During the pandemic, states across the country reported lower international migration numbers. However, as COVID-19 restrictions changed, Maryland added an average of 48,000 international migrants annually from 2022 to 2024.

Chart 11- Average Total Net Migration for Maryland by Decade

| 1980s | 1990s | 2000s | 2010s | 2020s |
| 24,440 | 18,210 | 14,617 | 2,588 | 9,683 |

Based on the Decennial Census (1980, 1990), the American Community Survey (2000s) and birth and death data from administrative records, total migration is calculated as a residual. For years 2010 and forward, total migration statistics come from the components of population change which are reported in the Census Bureau's Annual Population Estimates.

■ Net Migration

Census Bureau's components of population change, part of the Annual Population Estimates
Source: Maryland Department of Planning
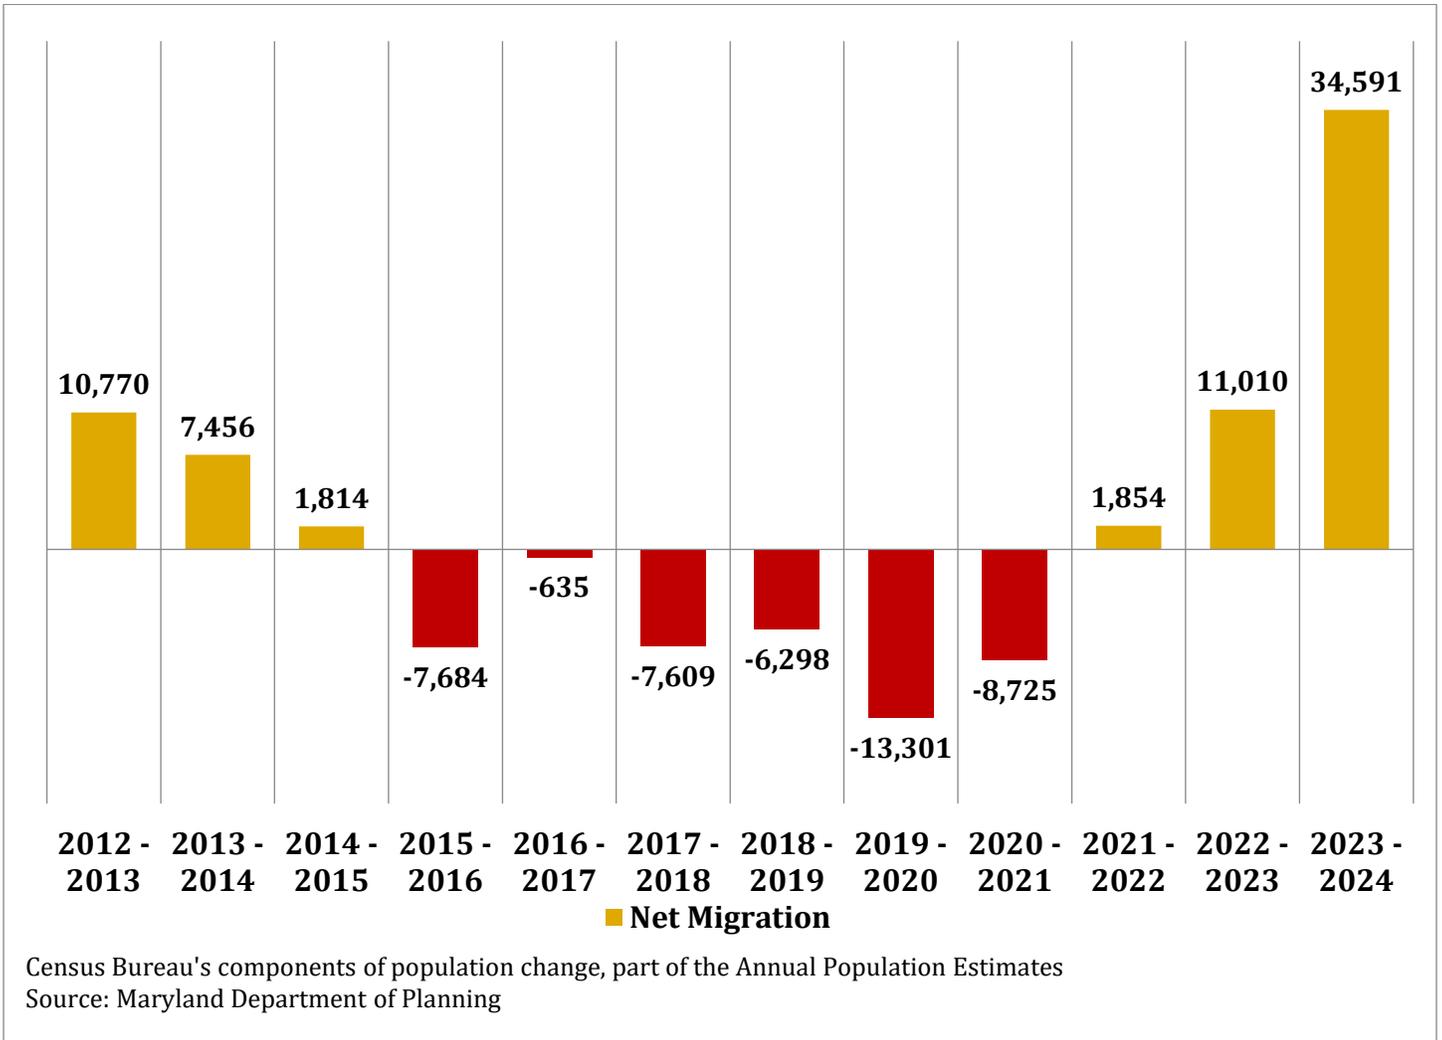

Immigrants (foreign-born) have been an important source of population growth statewide since 2000. Between 2010 and 2020, the foreign-born population made up 40% of the total population growth in Maryland. The foreign-born are a significant component of overall population growth for several of Maryland's jurisdictions, including 44,655 in **Montgomery County,** 43,414 in **Prince George's County**, and 20,006 in **Howard County** (See Chart 13).

Chart 13. Counties with the Largest Increase in Foreign Born Population, 2010 – 2020

County	Foreign Born Increase	% of Total Population Change
Montgomery	44,655	49.5%
Prince George's	43,414	41.8%
Howard	20,006	44.2%
Baltimore	19,516	39.4%
Anne Arundel	10,020	19.8%
Frederick	7,353	19.2%

% Represent the proportion of total population change from foreign born poulation change
Source: American Community Survey, 5-year Estimates data
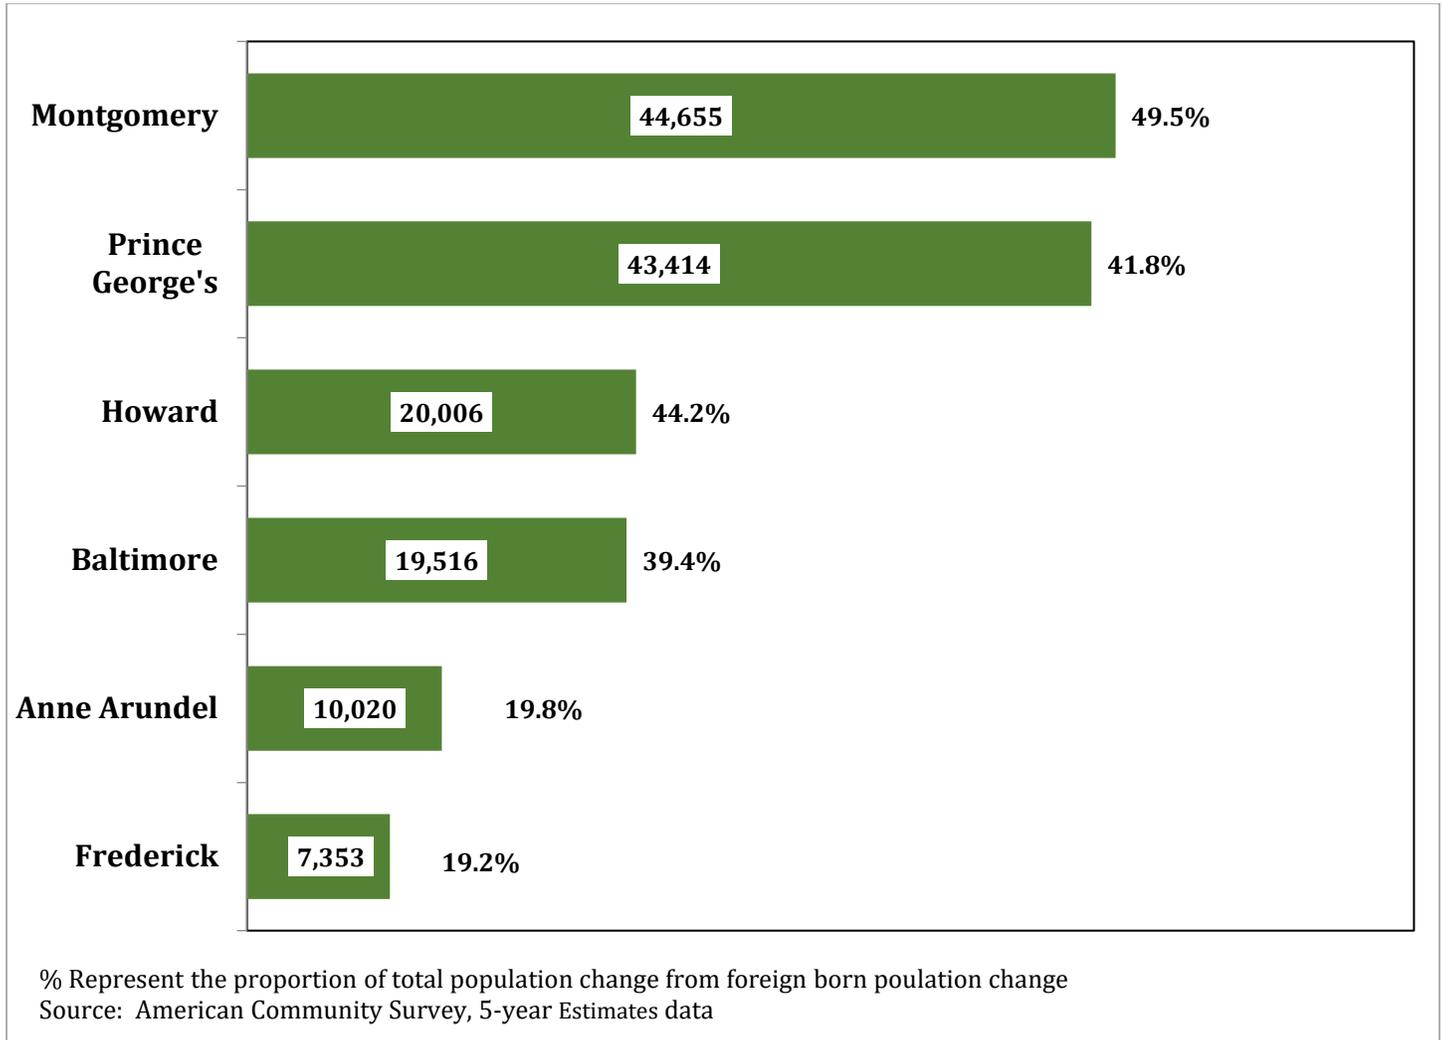

From a statewide perspective, losses in domestic migration and gains from immigration have been important factors in increased minority enrollment. The largest gains in public school enrollment from 2014 to 2024 were among Hispanic (80,865) and multi-race (12,221) students, while non-Hispanic white enrollment declined significantly (See Charts 14 and 15). The share of non-Hispanic white students enrolled in Maryland public schools declined from 40.4 percent of total enrollment in 2014 to 32.2 percent in 2024. African American student enrollment share has declined from 34.3 percent in 2014 to 32.5 percent in 2024. In the same period, 2014 to 2024, the Hispanic share of public-school enrollment rose from 14.4 percent to 22.8 percent (See Chart 16).

Chart 14- Change in Total Public School Enrollment in Maryland by Race & Hispanic Origin, 2014 – 2024*
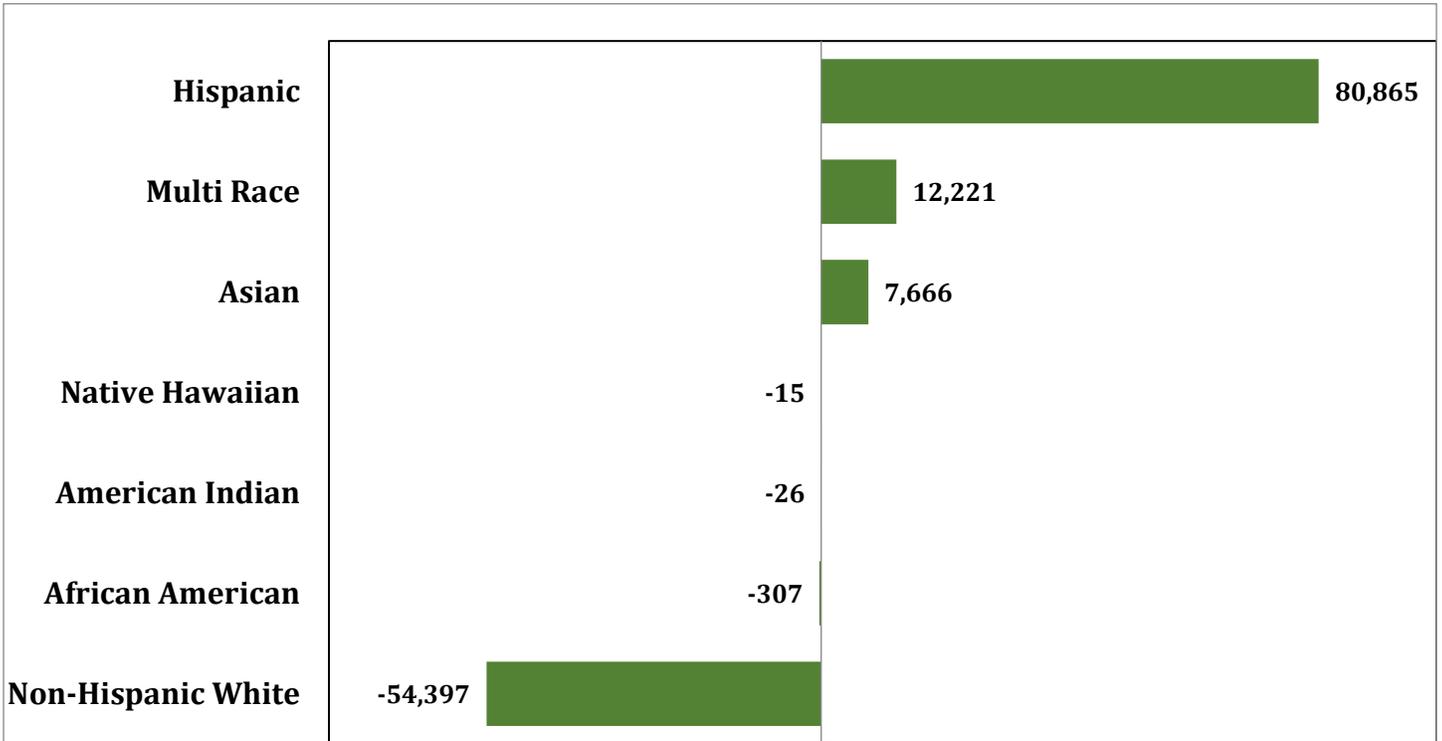

Race / Hispanic Origin	Change
Hispanic	80,865
Multi Race	12,221
Asian	7,666
Native Hawaiian	-15
American Indian	-26
African American	-307

Intra-State Migration

Immigration has been an important source of population growth for the inner suburban counties (Montgomery, Prince George's, and Baltimore) since the 1990s, while intra-state migration, the movement of people from one Maryland county to another, has been a key element in the growth of many outer suburban and rural counties. The pattern of intra-state migration flows has typically been from the inner suburban counties to contiguous outer suburban counties and from outer suburban counties to more rural counties. For example, out-migration from **Montgomery** and **Prince George's counties** increased total population and school enrollment in many outer suburban jurisdictions, including **Calvert**, **Charles**, and **Frederick counties**. More recently, the trickle-down of population continued from outer suburban counties to exurban counties, increasing populations through intra-state migration in **Washington County** (primarily from **Frederick** and **Montgomery counties**) and **Cecil County** (primarily from **Harford County**).

Home Schooling Enrollment

The COVID-19 pandemic impacted many key components of school enrollment throughout the country. In Maryland, one of the changes more difficult to quantify is projecting the share of eligible students electing to be

19

homeschooled. Accurately forecasting the home-schooling enrollment numbers and their impacts on public school enrollment moving forward may need to be assessed, considering evolving social trends and the lack of comprehensive data resources. The available homeschool data, starting in 2008 and current as of 2023, shows relatively consistent enrollment totals averaging 25,659 home enrollments between 2008 and 2019. Homeschooling enrollments increased significantly in 2020, with 42,632 students, an increase of 14,804 or 53.2 percent from its previous peak in 2016. Growth continued in 2021 before a decline in 2022. Despite the 11.9% decrease in homeschooled students between 2021 and 2022, the state total for 2022 remained 11,741, or 42.2% greater than the pre-pandemic peak in homeschooled enrollments. Most recently, in 2023, homeschooling enrollment saw an increase of 554 or 1.4% over 2022.

Previous to the COVID-19 pandemic, homeschooled students did not represent more than 3.0% of the total K-12 enrollments. However, the number of home-schooled students in the 2021 school year made up 4.5% of total enrollments. Despite a slight reduction in homeschooling enrollment in 2023 compared to 2021, the share of K-12 total enrollments is still elevated compared to pre-pandemic levels, coming in at 4.0%.

Public/Private Enrollment Share

In addition to the number of births, domestic migration, immigration, and home-schooling enrollment, another important factor in determining public school enrollment is the percentage of all students who attend public versus private schools. Unfortunately, data on K through 12 private school enrollments within the last 14 years is not directly comparable to prior years or even to each other, and thus it is not possible to establish a historical trend through the current school year. This inability to compare those statistics is a result of the Maryland State Department of Education, which generates the non-public school enrollment data, switching to an online survey of private schools in 2008 (from a mail-out/mail-back survey), resulting in a much lower response rate than in prior years. Moreover, participation in the survey is voluntary and not subject to a thorough verification and audit process.

It is reasonable to assume that private school enrollment dropped in 2008 (and that the public share increased) due to economic hardships brought about by the Great Recession. It is, however, nearly impossible to verify the magnitude of that drop. More recently, in 2023 and 2024, a slight reduction in private school enrollments has occurred, declining by a total of 1,033 students from 2022 enrollments. However, 2024 enrollments are 10,154 or 10.5% greater than in 2014.

Trends and Projections in Public School Enrollment by Type

The Maryland Department of Planning's statewide and jurisdiction population and birth projections form the basis for the projected school enrollment. Growth in total enrollment is anticipated throughout all but one year (2026) of the projection horizon.

Total Public-School Enrollment

Public-school enrollment is expected to experience an increase of 2,497 students between 2024 and 2025, followed by a reduction of 110 students from 2025 to 2026. It is projected to increase for the remainder of the projection horizon by an average annual growth of 1,585 students. The main drivers of public-school enrollments during the projection period are international migration, declines in domestic out-migration, and births.

Public Elementary School Enrollment (Grades K through 5)

Historically, between 1972 and 1983, public elementary school enrollment (grades K-5) dropped by nearly 163,300 students (-36.9%), the largest decline to date (See Chart 17). This decline in elementary school enrollment is explained by the transition from the youngest baby boomers (baby boomers are born between 1946 and 1964 to

Generation X (those born in a period of declining births, 1965-1982). Gen X was followed, in turn, by the larger baby "boomlet" (sometimes called "Generation Y," "baby-boom echo" or more recently "millennials"), resulting in a 118,300 (42.4%) increase in elementary enrollment from 1983 to 1997. Lower numbers of births after the peak in 1990 resulted in a decline in elementary school enrollment from 1998 through 2006 of nearly -39,300 (-9.9%), yielding a total enrollment of just under 358,000. Elementary enrollment began to grow again in 2007 and averaged 4,300 new students each year from 2007 to 2017, with the gain in 2012 (8,291) the largest in the state since 1991.

Elementary school enrollment decreased significantly in 2020 (-19,123), the largest reduction since 1975 (-20,120). The reduction in 2020 was linked to the COVID-19 pandemic. While all elementary grades were affected, kindergarten enrollment dropped the most (-6,696 or -10.3%). The following year, in 2021, enrollment further fell by 3,152 students. Enrollments rebounded in 2022 with an increase of 3,017 students. The growth trend continued in 2023, adding 499 enrollments from the previous year and 30 additional enrollments in 2024. Elementary school enrollments are projected to continue to grow through 2026, increasing by a total of slightly under 4,000. Declines in elementary enrollments are expected in the middle part of the projection period from 2027-2031, reducing by an annual average of 1,232 (See Chart 3 in the Executive Summary). In the final three years, positive growth is expected to return, adding 4,700 enrollments from 2032-2034.

The COVID-19 pandemic, birth patterns, as well as changing "K to birth" and "first grade to birth" ratios (see methodology section), all play a part in this pattern of gain-loss-gain, over the next several years. Total Elementary school enrollment is projected to reach 388,150 by 2026, then decline each year through 2031 to 381,990. Growth is expected in each of the final three years of the projection period, reaching 386,690 by 2034.

Chart 17- Public Elementary School Enrollment in Maryland, Historical and Projected, 1974 – 2034*

* Includes grades K thru 5   **Projected**   **Historical**
Source: Maryland State Department of Education (historical) and the Maryland Department of Planning (projections)
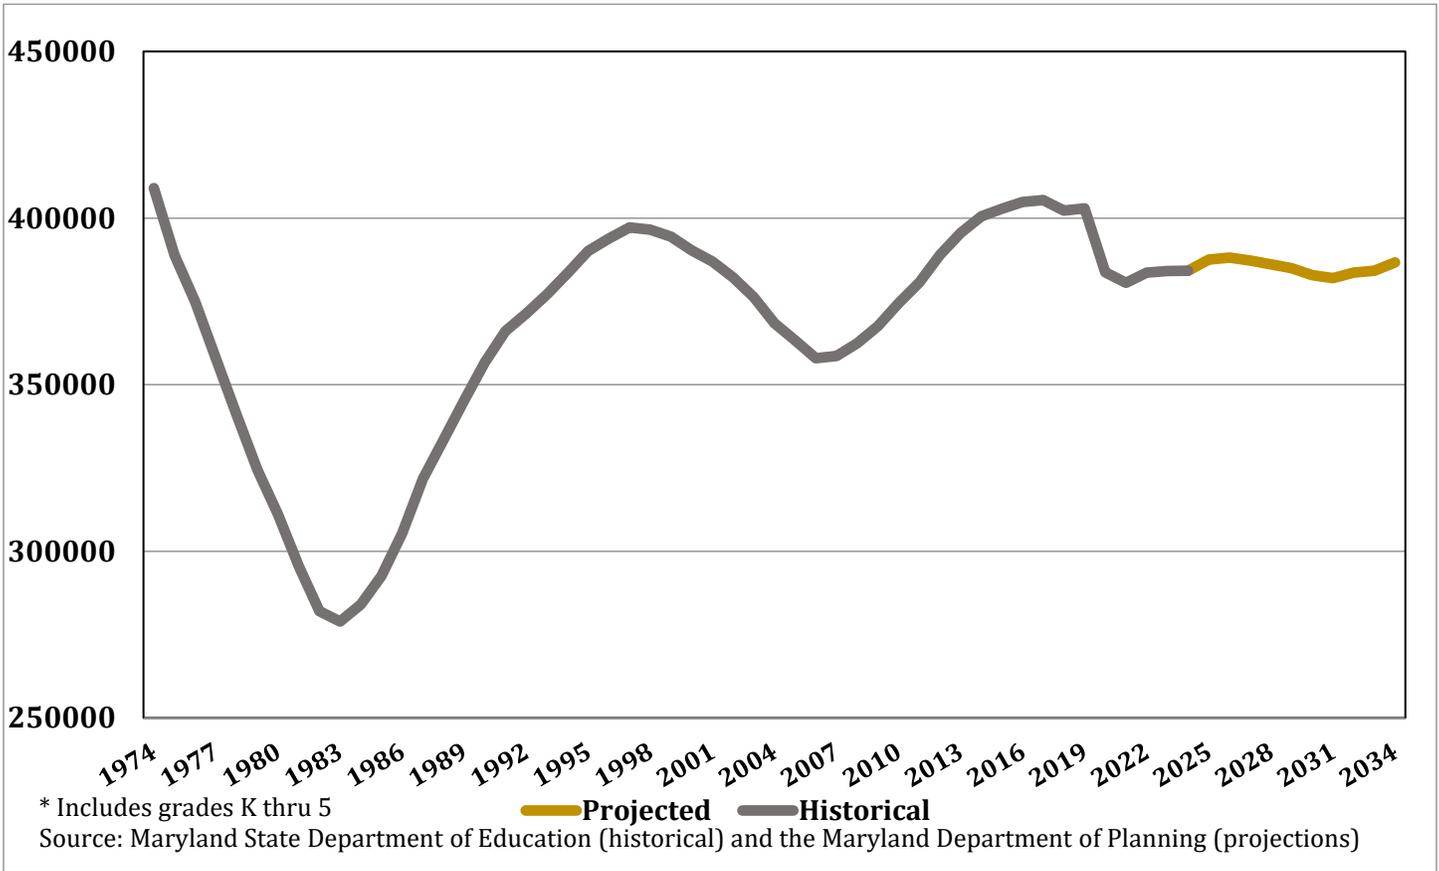

Public Middle School Enrollment (Grades 6 through 8)

Changes in public middle school (grades 6-8) enrollment follow elementary school enrollment patterns, with only the age of the students accounting for the staggered trough and peak (See Chart 18). Middle school enrollments in 2019 were the highest since 1977 at 207,776, but enrollments began to fall each year, reaching 196,857 in 2023. Most recently, enrollments increased by 71 in 2024 compared to 2023. Enrollments are projected to continue growing through the first seven years of the projection period. Increases in middle school enrollment are expected to add 8,782 students by 2031. Decline in middle school enrollment is expected through the remaining three years of the projection horizon, decreasing by 4,130 from 2032-2034. The decreases in middle school enrollments from 2032 to 2034 are attributed to a decline in the number of births during the COVID-19 pandemic, leading to reduced enrollment as these birth cohorts reach middle school age.

Chart 18 - Public Middle School Enrollment in Maryland, Historical and Projected, 1974 – 2034*

* includes grades 6 thru 8
Source: Maryland State Department of Education (historical) and the Maryland Department of Planning (projections)
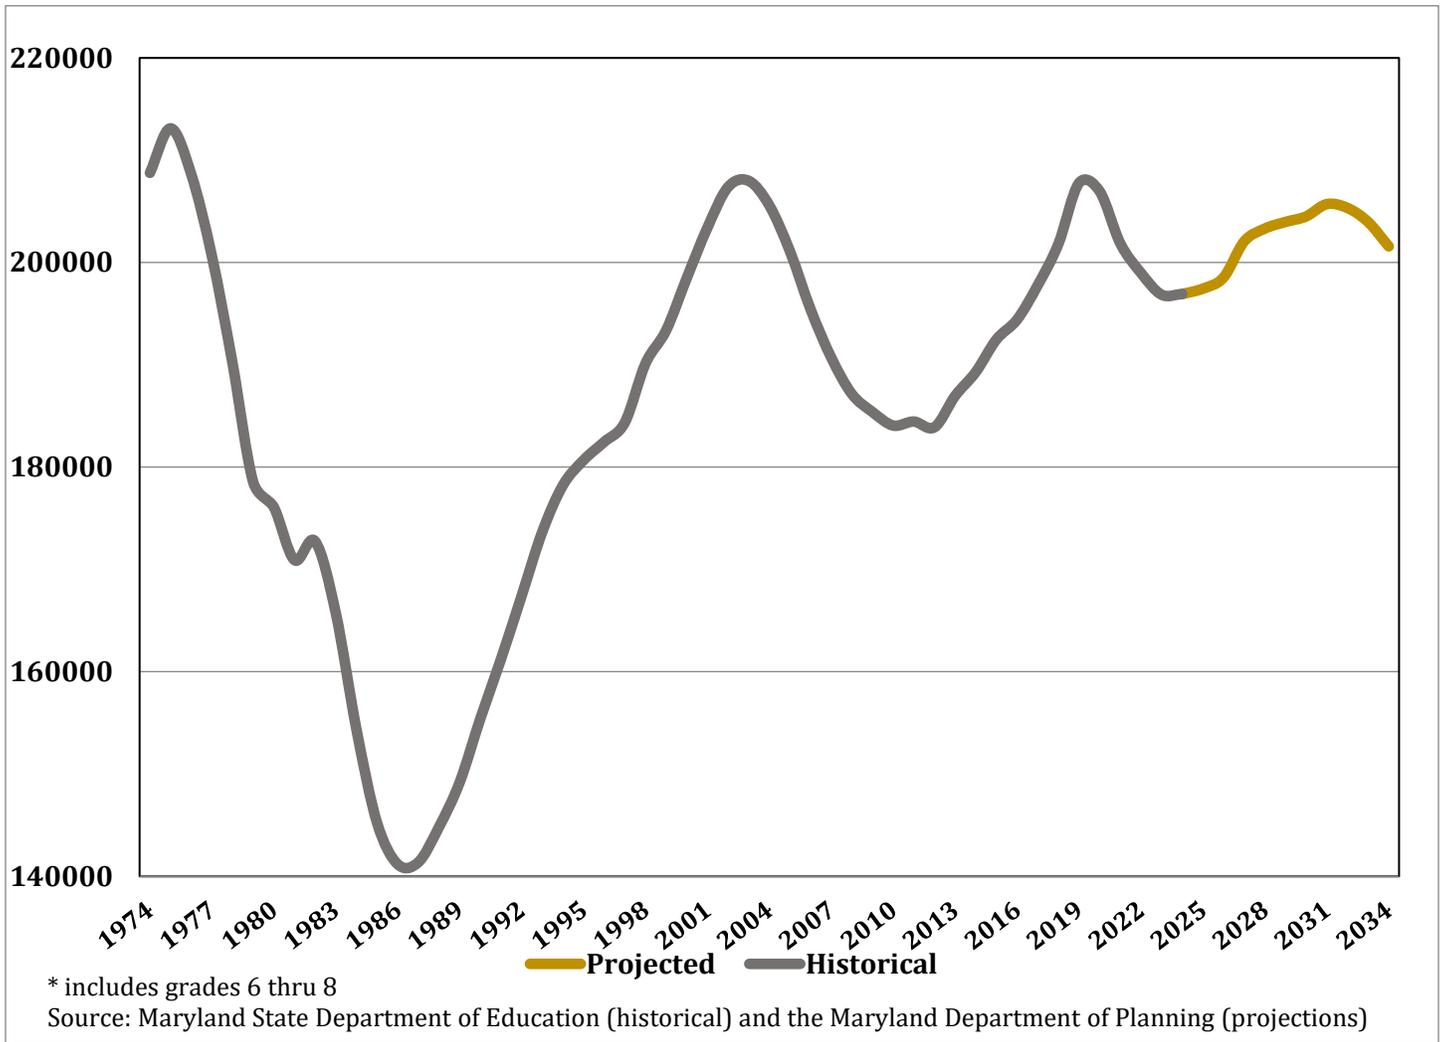

Public High School Enrollment (Grades 9 through 12)

Growth in public high school enrollment (grades 9-12) is expected to follow the same peak-to-trough-to-peak cycle as elementary and middle school enrollments, but with a shift to the right (See Chart 19). High school enrollments are also boosted by the two-step increase in the age of compulsory attendance.[3] Since 2015, student enrollments have increased every year through 2024, reaching a historical peak in 2024 of 277,989. Total public high school enrollment is expected to decline in the first three years of the projection period (2025-2027). Despite the reduction in enrollment between 2025 and 2027, enrollment is expected to reach a new peak in 2030 and continue to grow to the end of the projection horizon in 2034 (See Chart 5). Overall, through the projection period, high school enrollment is projected to gain about 7,891 or 2.8%, reaching a new all-time peak high school enrollment of 285,880 in 2034.

Jurisdiction Projections over the Next 10 Years

Total Enrollment

As statewide enrollment is projected to grow by 15,100 over the next 10 years, the five counties with the largest numeric increases are **Frederick** (7,042), **Charles** (2,155), **Harford** (1,934), **Carroll** (1,831), and **Anne Arundel** (1,817) **counties** (See Chart 20). Five jurisdictions are expected to have lower enrollments in 2034 compared to their 2024 enrollments. The largest declines in enrollment are expected to occur in **Baltimore City** (-4,555), Howard (-1,213), **Garrett** (-373), and **Allegany** (-220) **counties.**

Chart 20- Change in PublicSchool Enrollment by Jurisdiction, 2024 – 2034

Source: Maryland Department of Planning

The source of enrollment growth will vary by jurisdiction. For example, growth in **Montgomery** County schools is mostly due to gains from international migration.[4]. At the same time, domestic outmigration from **Montgomery** and **Prince George's** counties is a major source of enrollment growth for **Frederick** and **Charles** counties, respectively; these suburban counties will experience the largest and second-largest numeric increases over the ten-year projection period.

Projections (2025-2034) prepared by the Maryland Department of Planning

Baltimore City experienced consecutive years of decline, losing nearly 30,700 students (-28.3%) between 1994 and 2007. Despite an increase in total enrollments from 2009 to 2014, enrollments declined from 2015-2019 and slightly increased in 2020. Since 2020, **Baltimore City's** public school enrollment has continued to diminish, losing 3,146 students or 4.2% between 2020 and 2023. However, in 2024, **Baltimore City** experienced the largest annual increase in enrollment since 1994. Despite the increase in 2024, **Baltimore City** is projected to lose enrollment in the first half of the projection period, decreasing by 5,855 enrollments by 2029. These declines are the result of reduced annual births and domestic out-migration. The latter half of the projection period, from 2030-2034, however, growth is expected to add 1,300 new enrollments.

Among all jurisdictions in Maryland, **Frederick County** is projected to experience the largest percentage and numeric increase of 7,042 (15.2%) over the 2024-2034 period. **Somerset County** is projected to have the second-highest percentage increase (8.8%). **Charles County** is projected to have the third-highest percentage increase (8.0%), mainly due to strong overall population growth and increased births. Other counties expected to have significant enrollment gains over the projection period are **Carroll** (7.1%) and **Harford** (5.3%) counties in the Baltimore Region, **Wicomico County** (4.9%) in the Lower Eastern Shore Region, **St. Mary's County** (4.7%) in the Southern Maryland Region, and **Washington County** (3.1%) in the Western Maryland Region (See Chart 21 and Table 5).

Five jurisdictions are projected to have a decline in enrollment over the next 10 years, including **Baltimore City** and **Allegany, Dorchester, Garrett and Howard counties**. **Baltimore City** and **Howard County** are projected to have the largest numeric declines, with **Baltimore City** enrollments projected to decrease by 4,555 (6.2%) and **Howard County** reducing by 1,213 (2.2%) over the projected ten years.

Jurisdiction	Percent Change
Frederick	15.2%
Somerset	8.8%
Charles	8.0%
Carroll	7.1%
Harford	5.3%
Wicomico	4.9%
St. Mary's	4.7%
Calvert	3.8%
Caroline	3.3%
Washington	3.1%
Kent	2.5%
Worcester	2.4%
Anne Arundel	2.2%
Cecil	1.8%
Talbot	1.3%
Prince George's	0.9%
Montgomery	0.9%
Queen Anne's	0.5%
Baltimore	0.4%
Howard	-2.2%
Dorchester	-2.3%
Allegany	-2.9%
Baltimore City	-6.2%
Garrett	-11.7%

Source: Maryland Department of Planning

The projected growth in **Frederick County** over the next 10 years represents an upward trend that has lasted since the early 80s and is expected to continue. **Frederick County** hasn't experienced consecutive years of enrollment decline since the 1979-1983 school years. The enrollment growth for Frederick County, particularly in the last 10 years, has been substantial, increasing by 17.1%, more than double the second-highest percent growth of Howard County at 6.7% from 2014 to 2024. Frederick County's growth in enrollment coincides with the overall population growth, increasing by 16.4% from 2010 to the 2020 Census. Frederick County is projected to continue its enrollment growth trend, increasing by 15.2% over the next 10 years. The historical and projected enrollment growth in Frederick is the result of strong domestic migration patterns from the Baltimore region and Montgomery County. Frederick County had the second-highest number of units authorized for construction in 2024.[5] Increased residential construction, paired with its proximity to the Dulles technology corridor in northern Virginia and biotech centers in Bethesda and Rockville, provide ample employment opportunities.

Elementary School Enrollment

Nine of the twenty-four jurisdictions in Maryland are projected to reach peak elementary school enrollments in 2034. Four counties are projected to reach their peak elementary enrollment between 2029 and 2032. Out of the remaining eleven counties, five are projected to have already peaked or will peak in 2025 (See Table 6).

For most jurisdictions, growth in elementary school enrollment began in 2007 when the transition to both full-day kindergarten (2007), as well as the new age-eligibility requirements for kindergarten (2006) and first grade (2007) students, was completed. Although statewide enrollment will be higher at the end of the 10-year projection period, the statewide total saw a sharp decline in both 2020 and 2021, decreasing by 22,275 during this time. In 2022, 2023, and 2024, there was a slight rebound, adding 3,546 enrollments. Enrollment is anticipated to continue growing through 2026, with a decline returning in 2027 and continuing until 2031. Most of the growth in elementary enrollment is projected to occur between 2032 and 2034, increasing by 4,700 over the time-period.

The largest projected numeric gains in elementary enrollment are expected in **Frederick** (2,810), **Anne Arundel** (1,089), and **Harford** (837) counties. In percentage terms, the largest gains are projected to occur in **Somerset** (23.7%), **Kent** (15.7%), and **Frederick** (13.6%) counties.

Howard County is projected to have the largest decline in elementary enrollment over the 10-year projection period (-2,648, or -10.9%). **Baltimore City** is expected to have the second largest numeric decline in elementary enrollment by the end of the 10-year projection period (-2,492, or -7.3%).

Projections (2025-2034) from the Maryland Department of Planning

Middle School Enrollment

Middle school enrollment in the 2013-2019 period showed average annual gains of 3,400 students. The addition of 5,959 middle school students in 2019 was the largest enrollment increase in more than 25 years. However, enrollment declined every year between 2020 and 2023, reducing middle school enrollment by 10,919 during this time. Most recently, in 2024, enrollments increased by 71 compared to 2023. Building upon the marginal gains of 2024, the first seven years of the projection period, 2025 to 2031, an average annual growth of 1,255 students is expected, ending with a total of 205,710 enrollments in 2031. The remaining three years of the projection period show a decline of 4,130 middle school students, ending the projection period with a total of 201,580 middle school enrollments (See Tables 9, 10, and 11).

Compared to 2024, 10 of the 24 jurisdictions are projected to have lower middle school enrollment in 2034 (See Table 10). Fourteen counties are expected to experience growth over the next ten years, with the highest numeric increases in **Frederick** (2,133, or 20.1%), **Baltimore** (1,049 or 4.4%), **Carroll** (818 or 13.8 %), and **Charles** (759, or 12.2%) counties.

Baltimore City is expected to have the largest numeric decline (-838 or -5.0%) in middle school enrollment of the ten jurisdictions that are anticipated to have declines. Following Baltimore City are **Prince George's** (-670 or -2.3%) and **Montgomery** (-637 or -1.8%) **counties**. The largest percentage declines are projected for **Garrett** (-126, or -16.9%) and **Kent** (-24, or -6.8%) **counties**. Each of these counties experiences intervals of growth and decline throughout the projected 10-year period.

Projections (2025-2034) prepared by the Maryland Department of Planning

High School Enrollment

Statewide, high school enrollment has increased in each of the past nine years. Prior to that growth there was a seven-year period of decline from 2007-2015, with the exception of a small gain in 2014 (447, the first gain since 2006). Looking forward to the ten-year projection period, overall high school enrollment is expected to increase by 7,891 (2.8%) above 2024 levels. The 2024 total of 277,989 represents a new peak for high school enrollment in Maryland, exceeding the 2006 peak total of 272,575 by 5,414 (2.0%). Enrollments are projected to decline annually through 2027 (-3,899 from 2025-2027), before increasing each year through the end of the projection period and reaching a new statewide high of 285,880 in 2034. While 14 jurisdictions are expected to have had their largest high school enrollments in 2024 or 2025, most of the statewide growth is expected to occur in the last five years of the projection period (see Tables 12, 13, and 14). Eight of the remaining 10 jurisdictions are projected to have their peak high school enrollment in the last two years of the projection period. Of those, six occur in 2033.

The top four jurisdictions with the largest cumulative gains by the end of the projection period are **Prince George's (2,516, or 6.2%), Frederick (12,099, or 13.9%), Montgomery (1,750, or 3.4%), and Howard (1,612, or 8.7%)** counties. All four of the jurisdictions expected to have the largest growth over the projection period are expected to reach their peak in 2033. In total, nine jurisdictions are projected to have an increase in high school enrollment from 2024 to 2034; eight of these are projected to reach peak high school enrollment in either 2033 or 2034.

Fifteen counties are projected to have lower high school enrollments in 2034 than in 2024. Of those, the largest numeric declines are expected in **Baltimore City** (-1,225, -5.6%) and **Baltimore** (-460, -1.3%), **Cecil** (-240, -5.2%), **Garrett** (-190, -18.6%), **and Worcester** (-147, -6.6%) **counties.**

Projections (2025-2034) prepared by the Maryland Department of Planning.

Methodology

The methodology used in preparing the enrollment projections involves an explicit effort to use the Maryland Department of Planning's latest age-specific population projections (December 2020) for each political subdivision to guide the selection of key parameters used to develop grade-specific school enrollment projections. Thus, the age-specific population projections provide a starting point for deriving the public-school enrollment projections.

Population Projections

Age-specific population projections for each jurisdiction are used to assist in estimating the following parameters relevant to the school enrollment projections.

- The projected school age population (5-17 years old), and
- Projected live births

The historical relationship between the school age population (5-17 years) and total persons enrolled in school (both public and private) from the 2010 and 2020 censuses and the 2019- 2023 American Community Survey is used in conjunction with the projected school age population to project a range of total school enrollment for each jurisdiction. The historical relationship between total (including both public and private school enrollments) and public-school enrollment is then combined with projected total school enrollment to derive a range of estimates of the projected public-school enrollment for each jurisdiction. The range (high, middle, and low) of projections of public-school enrollment based on the projected school-age population is subsequently used as a guide in selecting the assumptions for the public-school enrollment projections derived by the grade succession ratio methodology.

Grade Succession Projections

The grade succession ratio methodology requires historical data for each political subdivision on the number of live births and the number of children enrolled in public schools by grade. For these projections, historical birth data for the years 1970-2023 and historical school enrollment data for the period 1975-2024 are analyzed.[6]

With the phase-in of older age-eligibility requirements for kindergarten beginning with school year 2003 (and first grade for school year 2004), historic birth data by month are used, starting with calendar year 1998, to derive "kindergarten-eligible births" five years hence and "first grade-eligible births" six years hence. Students entering kindergarten in the fall of 2003 must have been five by November 30, 2003. Age eligibility was raised by one month in the following three years until the 2006 school year, when students entering kindergarten were required to be age five by September 1, 2006, and age six by that date for the first grade. Thus, during the four-year phase in period (school years 2003-2006 for kindergarteners and 2004-2007 for first graders), only 11 months' worth of births were eligible for each school year. [7]

---

[6] Birth data are from the Maryland Department of Health. Since 1991, these data have been derived by geocoding the birth mother's address to the jurisdiction of residence.

[7] For example, for the 2006 school year beginning in the fall of 2006, eligible births for kindergarten enrollment would be for the 11 months from October 2000 through September 1, 2001.

Besides historical data on the ratios of births and associated enrollment in kindergarten and first grade, historical grade succession ratios that reflect projected grade cohort survival for all other grades, from first to second grade and from eleventh to twelfth grade, are analyzed. Specific combinations of historic ratios are then selected that generate grade-specific school enrollment projections that are consistent with the range of school-age population-based projections of public-school enrollment. The resulting grade-specific school enrollment projections combine the effects of:

- Births in a given year that are eligible for subsequent kindergarten and first grade enrollment;

- Mortality for school-age children;

- Net migration of school-age children;

- Net transfer of children between public and private schools;

- Non-promotion of children to the next grade level; and

- Dropouts in the later years of secondary school.

The grade succession methodology consists of several computational steps. First, the ratio of kindergarten and first grade enrollment for the historical period to enrollment-eligible live births five and six years previously to enrollment is calculated for each jurisdiction. These ratios reflect recent trends in both births and migration for children entering public schools. For example, where a jurisdiction's historical ratio of kindergarten and first grade enrollment to births is significantly less than one, this reflects either net outward migration of potentially eligible enrollees or a high proportion of private school enrollment (or some combination of the two). Where a jurisdiction's ratio is significantly greater than one, this reflects a net inward migration of school-age children or a lower proportion of private school enrollment (or some combination of the two).

Based on the projected births and the anticipated future relationship between births and kindergarten as well as first grade enrollment, ratios are developed for the projection period (see tables in the appendices for each jurisdiction titled, "Ratio Kindergarten and First Grade to Births - Historical and Projected," where the projected ratios are for the 2025-2034 period and projected births are for 2023 to 2029).

By comparing the ratios for the projected years to the historical ratios of enrollment in kindergarten to births five years previously (as well as first grade enrollment to births six years previously), specific projected ratios of enrollment in kindergarten to births (and enrollment in first grade to births) are selected (See Appendix B tables titled "Ratio Kindergarten and First Grade to Births - Historical and Projected"). Additionally, the implementation of full-day kindergarten by 2007 was specifically considered in selecting kindergarten to birth ratios.[8]

For each jurisdiction, grade succession ratios for all other except kindergarten and first grade are calculated by grade from enrollment in the preceding year for the historical years 1983-2024. (See tables in the appendices titled "Grade Succession Ratios - Historical," which show in the top section of the table the grade succession ratios for each pair of years.)

---

[8] It is also for this reason that first grade enrollment was projected using the ratio to births as opposed to the grade succession ratio of first grade to K.

In the bottom section of these ratio tables are a series of constructed averages of two or more historical single-year ratios (e.g., average for the last two years, average last two years minus most recent year, etc.). It should be noted that, for purposes of deriving reasonably unbiased grade succession ratios, the historical enrollment in special education and ungraded classes before school year 2004 is distributed among the graded students in proportion to the number of graded students in the respective elementary and secondary grades. This procedure helps to eliminate variations in the ratios from year to year due to changes in policy and practices with respect to ungraded and special education enrollment. Beginning in 2004, all public school special education and ungraded students have been assigned a grade.

Using the projected ratios of kindergarten to births and first grade to births as shown in "Ratio Kindergarten and First Grade to Births - Historical and Projected", and the alternative grade succession ratios shown in the "Grade Succession Ratios – Historical" for grades two through twelve, alternative school enrollment projections are derived for each jurisdiction using the "grade succession" methodology. The actual grade succession ratios used for the school enrollment projections are noted at the bottom of each jurisdiction's "Grade Succession Ratios – Historical" page.

The process of selecting the grade succession ratios for each jurisdiction is aided by the comparison of the range of population-based projections of anticipated public-school enrollment to the grade succession ratio-based projections. The selected "grade succession" projection is the one that appears most reasonable given the projections of school age population and births, and the trends in public school share of total (public and private) enrollment.

The actual process of using the various succession ratios to calculate the projected enrollment by grade for each jurisdiction is relatively straightforward. The ratio of kindergarten to births and first grade to births for the projected period is multiplied by the respective eligible births five and six years previously, respectively, to arrive at projected kindergarten and first-grade enrollment for 2025-2034.

Using the selected values for the succession ratios for grades two through twelve, current enrollees (2024) and projected new enrollment in each year (including first-grade students derived by the ratio with births six years prior) are succeeded from one grade to the next for each year in the projection period.[9] The resulting projections of school enrollment by grade, by year, for the years 2025 through 2034 for each county and Baltimore City appear in the body of this report.

Adjustments for Compulsory Public School Attendance

Additional steps in the calculation of grade succession ratios were added to account for the passage of SB362 in the 2012 Maryland legislative session which raised the age for compulsory public-school attendance in two stages age 17 starting in July 1, 2015 and age 18 starting in July 1, 2017. Historical data on the number of dropouts by age and grade by jurisdiction were obtained from the Maryland State Department of Education for enrollment years 2020/2021 to 2023/2024. Due to the declines in the number of reported dropouts statewide, however, only data for the most recent year (2023/2024) of this five-year period was used.

---

[9] The kindergarten (and first grade) enrollment in "Ratio Kindergarten and First Grade to Births - Historical and Projected" include ungraded and special education enrollment prior to school year 2004 based on the distribution of these enrollment figures as shown in the "Grade Succession Ratios – Historical" tables.

The following assumptions and processes are used to account for the change in the age for compulsory public-school attendance:

- The number of 2023/2024 dropouts (by age and grade) that no longer would be eligible to drop out with the new law are put back into the grade from which they dropped out.[10]

- Each year, the 2023/2024 dropouts are added to each grade. Each succeeding year, the dropouts are carried forward with the following assumptions:
    - In the succeeding year, if they remain ineligible to drop out, assume 85 percent "succeed" to the next year
    - If they are now eligible to drop out, assume 50 percent do. Each additional year, each succeeding cohort is reduced by one-half; and
    - Cohorts are succeeded to age 19. Afterwards they are eliminated.

- A matrix of total dropouts is added by year out to the latest projection year.

Note that the dropouts derived by the method described above are added in after the grade succession results. Thus, the dropouts are not subject at any time to the grade succession ratio process that applies to the rest of the enrollment. Accounting for the increased age of compulsory public-school attendance results in an increase in high school enrollment by the last year of the projection period of just under two percent.

---

[10] It was assumed that 2.5 percent of the dropouts would qualify for the exemptions under the law and would still have dropped out. In other words, 97.5 percent of the dropouts were added back into the appropriate grades.

Organization of Detailed Data Tables

This report includes three Appendices containing statistical tables on historical and projected enrollments. Appendices A and B include detailed enrollment tables by grade for the state of Maryland and its 24 jurisdictions (Baltimore City and the counties) respectively. Appendix C summarizes by jurisdiction the historical total, public and private school enrollments from 2014 through 2024 as well as the projected public-school enrollments from 2025 -2034.

The figure below lists the detailed data tables and their availability by Appendix.

Summary enrollment figures for elementary (grades K through 5), middle (grades 6 through 8), and high (grades 9 through 12) schools also appear at the bottom of each of the first four tables along with a summary total of all secondary enrollment (grades 6 through 12).

The historical grade succession ratios for grades 9 through 12 do not reflect adjustments made to account for increases in the compulsory age for public-school attendance See the Methodology section for an explanation of how adjustments to grade-succession derived enrollments were handled.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Projected Values are underlined

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Projected Values are underlined

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Howard County

Projected Values are underlined

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Data Prepared by the Maryland Department of Planning

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2007 and January to August 2008). All subsequent school years have a September to the following August time frame for kindergarten eligibility.
