

THE TOWN OF MILLINGTON 2009 COMPREHENSIVE PLAN

Millington, Maryland June 2009

Prepared by Peter Johnston & Associates, LLC
In Coordination with the Millington Planning Commission

Geographic Information Systems (GIS) data provided by the
Kent County Office of Emergency Management and the
Kent County Department of Planning, Housing, and Zoning

Millington Comprehensive Plan Table of Contents

INTRODUCTION

Background	1
Maryland Planning Laws	2
Article 66B – Planning & Zoning Enabling Act	1
1997 Neighborhood Conservation & Smart Growth Areas Act.....	3
Maryland State Finance & Procurement Article.....	3
Maryland House Bill 1141.....	4
Smart and Sustainable Growth Act of 2009	5
The Millington Comprehensive Plan Update	8
The Millington Vision	9

CHAPTER 1: EXISTING CONDITIONS

Population	1-1
Population Estimates.....	1-2
Population Age and Sex Characteristics	1-2
Population Race Characteristics	1-4
Population Household and Family Characteristics	1-4
Population Education Characteristics.....	1-6
Employment & Income	1-7

CHAPTER 2: GOALS & OBJECTIVES

Land Use	2-1
Growth Management	2-1
Community Facilities	2-2
Water Resources	2-2
Resource Conservation	2-3
Transportation	2-4
Housing	2-4
Community Design	2-4
Heritage Preservation	2-5

CHAPTER 3: LAND USE

Background	3-1
Existing Land Use	3-2

Residential Uses.....	3-3
Commercial Uses	3-4
Public Uses.....	3-4
Agricultural Uses.....	3-4
Land Use Plan	3-6
Future Land Use	3-6
Land Use Planning Areas	3-8
Town Center	3-8
Old Town Residential.....	3-9
Suburban.....	3-9
Rural Residential.....	3-10
Planned Neighborhood Development.....	3-10
Employment	3-12
Public/Semi-Public.....	3-12
Parks and Open Space	3-12
Conservation.....	3-13

CHAPTER 4: COMMUNITY FACILITIES

Town Government	4-1
Public Schools	4-3
Fire, Rescue, and Emergency Services	4-3
Police Protection	4-4
Parks and Recreation	4-4
Millington Waterfront Park	4-4
Robvanary Park.....	4-4
Millington Community Pool.....	4-5
Millington Skateboard Park	4-5
Library	4-5

BACKGROUND

The purpose of the 2008 Millington Comprehensive Plan (the Plan) is to provide a series of goals, objectives, and recommendations to manage and direct growth and development in Millington. Upon adoption it becomes the basis for the preparation of specific policies, programs and legislation, such as zoning and subdivision regulations, to implement the policies set forth in the Plan. As a policy document, it is general in nature, providing “big picture” guidance. The Plan encompasses the entire geographic area of the Town including all functional elements that bear upon its physical development such as transportation, land use, and community facilities. While the Plan is intended to describe growth policies for the Town, there are aspects of growth that must be coordinated with neighboring Kent County and Queen Anne’s County.

PURPOSE OF THE PLAN

The “Purpose” of the Comprehensive Plan is to provide a series of goals, objectives, and practical implementation recommendations to manage and direct growth and development in Millington.

The Plan provides the basic framework and direction for all components of what may be considered the Town’s planning program. The Plan is not a “stand-alone” document but is supported and, in turn, supports related planning and zoning program documents such as the following:

- Millington Zoning Ordinance;
- Millington Subdivision Regulations;
- Millington Capital Improvements Plan & Budget-CIP;
- Millington Water & Sewer Facilities Plans; and
- Other important Town ordinances such as Sediment and Erosion Control, Floodplain Management, Chesapeake Bay Critical Areas, Stormwater Management, and Forest Conservation.

MARYLAND PLANNING LAWS AND POLICIES

ARTICLE 66B – PLANNING & ZONING ENABLING ACT

Article 66B of the Annotated Code of Maryland is the Planning and Zoning enabling legislation from which the Town of Millington derives its powers to regulate land use. Section 3.05 of the Article sets forth the minimum requirements for a comprehensive plan, which shall include among other things:

- A statement of goals and objectives, principles, policies, and standards;
- A land use plan element;
- A transportation plan element;

- A community facilities plan element;
- A mineral resources plan element, if current geological information is available;
- An element that contains recommendations for land development regulations to implement the plan.
- An element, which shall contain the planning commission's recommendations for land development regulations to implement the plan; and
- Other elements, such as a community renewal section, housing, conservation, natural resources, etc. at the discretion of the commission.

The context for planning in the Town of Millington includes growth management policies established by the State of Maryland in the Planning and Zoning Act. These policies or "visions" include the following:

1. Development is concentrated in suitable areas;
2. Sensitive areas are protected;
3. In rural areas, growth is directed to existing population centers and resources are protected;
4. Stewardship of the Chesapeake Bay and the land is a universal ethic;
5. Conservation of resources, including a reduction in resource consumption;
6. Economic growth is encouraged and regulatory mechanisms are streamlined;
7. Adequate public facilities and infrastructure under the control of the county or municipal corporation are available or planned in areas where growth is to occur; and
8. Funding mechanisms are addressed to achieve these "Visions."

The *Maryland Economic Growth, Resource Protection and Planning Act of 1992* added the requirement that a comprehensive plan must contain a "Sensitive Areas Element," which describes how the jurisdiction will protect the following:

- Streams and stream buffers;
- 100-year floodplains;
- Endangered species habitats;
- Nontidal wetland;
- Steep slopes; and
- Other sensitive areas a jurisdiction wants to protect from the adverse impacts of development.

Maryland has procedures to ensure that public infrastructure improvements are consistent with growth policies, as defined in the law. The Planning and Zoning Enabling Act stipulates that a local government "may not approve a local construction project involving the use of State funds, grants, loans, loan guaranties, or insurance, unless the project is consistent with the State's Visions." This plan has been prepared to meet the State's eight visions.

As the State's pre-eminent growth management law, Article 66B requires that county and municipal plans be coordinated. Each county and municipality within Maryland is required to update their comprehensive land use plans and implementing provisions every six (6) years.

NEIGHBORHOOD CONSERVATION & SMART GROWTH AREAS ACT OF 1997

In 1997, the Maryland General Assembly enacted the *Neighborhood Conservation and Smart Growth Areas Act* (Smart Growth). The intent of the legislation is to marshal the State's financial resources to support growth in Maryland's communities and limit development in agricultural and other resource conservation areas. At the heart of the Smart Growth concept are the "Priority Funding Areas" (PFAs), which represent local growth areas for targeted State funding. PFAs include municipalities, rural villages, communities, industrial areas, and planned growth areas to be served by public water and sewerage.

PRIORITY FUNDING AREAS – PFA'S

Lands within "Growth Areas" may be designated as a PFA provided sewer service is planned in a 10 year period and included in a *County Water & Sewerage Plan*, provided such designation is a long-term and planned development policy reflected in the Town's Comprehensive Plan.

The "Vision" of Article 66B creates consistency between the Planning and Zoning Enabling Act and Smart Growth by requiring adequate public infrastructure for State funding. Plans must show designated "Growth Areas" including areas planned for annexation by municipalities. Land within local growth boundaries may be designated as a Priority Funding Area (PFA) provided sewer service is planned in a 10-Year Water and Sewerage Plan and provided such designation is a long-term and planned development policy that promotes efficient land use and public infrastructure. Plans must include areas considered as PFAs, such as planned water and sewerage service areas, residential development areas, industrial development areas, economic development areas, and parks.

MARYLAND STATE FINANCE & PROCUREMENT ARTICLE

Maryland has procedures to ensure that public infrastructure improvements are consistent with growth policies, as defined in the law. The Planning and Zoning Enabling Act stipulates that a local government "may not approve a local construction project involving the use of State funds, grants, loans, loan guaranties, or insurance, unless the project is consistent with the State's "Visions."

The *Maryland State Finance and Procurement Article* links the concept of Priority Funding Areas to State financial assistance funding for infrastructure and other related projects. The Finance and Procurement Article states that funding for growth-related projects will be provided by the State "...if an existing community receives a public or community sewer system, an area beyond the periphery of the developed portion of the existing community may be designated as a priority funding area, if the development has a permitted average density of at least 3.5 units per acre and is served by a public or community sewer system."¹

Millington's corporate boundaries as of 1997 are considered a State "Certified" Priority Funding Area, according to Maryland Department of Planning data. Under Title 5; Subtitle 7B-03, "An area, other than

¹ Ibid.

an existing community (Town etc.), may be designated as a priority funding area if the area is within a locally designated growth area of the local government and is planned to be served under the approved 10-year water and sewer plan.” PFA applications are submitted to the Maryland Department of Planning (MDP).

2006 MARYLAND HOUSE BILL 1141

In 2006, the Maryland State Legislature passed House Bill 1141 (HB 1141), which provides for Amendments to Article 66B: “Planning & Zoning Enabling Act” and Article 23A: “Municipal Annexation Act” of the Annotated Code of Maryland. Amendments include provisions for the inclusion of a “Water Resources Element” and “Municipal Growth Element” in local comprehensive plans.

HOUSE BILL 1141

HB 1141 requires a “Municipal Growth Element” and a “Water Resources Element” for all comprehensive plans.

HB 1141 strongly encourages inter-jurisdictional coordination and cooperation with the County and State for effective growth management.

HB 1141 establishes additional substantive and procedural requirements for municipalities preparing comprehensive plans. This includes inter-governmental coordination for land use and growth management planning.

Information developed under the provisions of HB 1141 will be reviewed and evaluated by State agencies including the Maryland Departments of the Environment, Natural Resources, and Planning. Some provisions of the Bill are not effective until October 2009. Substantive procedural requirements include the following:

- The Town must include in its Comprehensive Plan a “Municipal Growth Element” that specifies where Millington intends to grow, if at all, outside its existing corporate limits. It also must discuss how the Town intends to address services, infrastructure, and environmental protection needs for the Growth Area.
- The Town must develop the “Municipal Growth Element” in coordination with Kent and Queen Anne’s Counties. Prior to approving a Growth Element, the Town must provide a copy to the Counties, accept comments from the Counties, meet and confer with the Counties, and, on request from either entity, engage in mediation to facilitate the Growth Element.
- The Town and Counties must include in their respective comprehensive plans a “Water Resource Plan Element” that identifies drinking water and other water resources to meet current and future demands. It also must identify suitable water and land areas to receive stormwater and wastewater derived from development.

- In order for land annexed after September 2006 to qualify for State assistance as a Priority Funding Area-PFA, the Town must complete an analysis of land capacity available for development. This includes infill and redevelopment. It also includes an analysis of land as needed to satisfy demand for development.
- House Bill 1141 gives affected local governments until October 1, 2009 to update their comprehensive plans to include the Water Resources Element, now required by existing law. There is the possibility of one to two six month extensions for good cause. Local governments that have not updated their plans by that time may not change the zoning classification of a property until their updates are complete.
- The Town must develop and share with other planning agencies an “Annexation Plan” that is consistent with its Growth Element in the Comprehensive Plan.

HB 1141 requires the Maryland Department of the Environment-MDE to provide technical assistance to local governments regarding the development of a Water Resources Element. The Maryland Department of Planning-MDP also is required to provide technical assistance to a municipality regarding the “Municipal Growth Element.” MDP encourages municipalities and counties to participate in joint planning processes and agreements.

HB 1141 changes the current “5-Year Rule.” In the past, the “5-Year Rule” would allow a County to delay municipal zoning on a newly annexed area. Under HB 1141, if land uses under a proposed municipal zoning for an annexed area are substantially different from the land uses specified for the area in a county comprehensive plan, mitigation may be required (if the county fails to approve the change). The new standard under HB 1141 will be to determine whether a substantial difference exists between the land uses and densities permitted under proposed town zoning and the land uses for an annexed area, including densities, permitted under the current county zoning. The mandates of HB 1141 indicate a strong need to coordinate new growth closely with the County and State. Since 2006, HB 1141 changes have been codified in Maryland laws (Article 66B, Article 23A, State Finance and Procurement Article - Annotated Code of Maryland).

SMART, GREEN, AND GROWING – SMART AND SUSTAINABLE GROWTH ACT OF 2009

During the 2009 legislative session of the Maryland General Assembly, major amendments were enacted to Article 66B of the Annotated Code of Maryland as well as the State Finance and Procurement Article. These combined amendments, known as the *Smart and Sustainable Growth Act of 2009*, represent substantive changes to the State’s planning and zoning enabling laws:

Updates to the State’s Eight Visions: In 2009, the Eight Visions espoused in Article 66B of the Annotated Code of Maryland have been expanded to include the following additional visions listed below. These visions also are included in the State Finance and Procurement Article (State Economic Growth, Resource Protection, and Planning Policy).

1. Quality of Life and Sustainability: A high quality of life is achieved through universal stewardship of the land, water, and air resulting in sustainable communities and protection of the environment.
2. Public Participation: Citizens are active partners in the planning and implementation of community initiatives and are sensitive to their responsibilities in achieving community goals.
3. Growth Areas: Growth is concentrated in existing population and business centers, growth areas are adjacent to these centers, or strategically selected new centers.
4. Community Design: Compact, mixed-use, walkable design consistent with existing community character and located near available or planned transit options is encouraged to ensure efficient use of land and transportation resources and preservation and enhancement of natural systems, open spaces, recreational areas, and historical, cultural, and archeological resources.
5. Infrastructure: Growth Areas have the water resources and infrastructure to accommodate population and business expansion in an orderly efficient, and environmentally sustainable manner.
6. Transportation: A well-maintained, multi-modal transportation system facilitates the safe, convenient, affordable, and efficient movement of people, goods, and services within and between population and business centers.
7. Housing: A range of housing densities, types, and sizes provides residential options for citizens of all ages and incomes.
8. Economic Development: Economic development and natural resource-based businesses that promote employment opportunities for all income levels within the capacity of the State’s natural resources, public services, and public facilities are encouraged.
9. Environmental Protection: Land and water resources, including the Chesapeake and Coastal Bays, are carefully managed to restore and maintain healthy air and water, natural systems, and living resources.
10. Resource Conservation: Waterways, forests, agricultural areas, open space, natural systems, and scenic areas are conserved.
11. Stewardship: Government, business entities, and residents are responsible for the creation of sustainable communities by collaborating to balance efficient growth with resource protection.
12. Implementation: Strategies, policies, programs, and funding for growth and development, resource conservation, infrastructure, and transportation are integrated across the local, regional, state, and interstate levels to achieve these visions.

Priority Funding Areas: The Smart and Sustainable Growth Act of 2009 affects Priority Funding Areas (PFA's) in regards to public land, adequate public facilities, and transfer of development rights. Changes to State laws discuss restrictions, moratoriums, or other capacity limitations imposed on development as a result of a local ordinance or law. These restrictions must be reported to the Maryland Department of Planning (MDP) every 2 years by the local jurisdiction, based on specific criteria. In turn, MDP must prepare a report regarding the statewide impacts of adequate public facilities every 2 years. Transfer of development rights language has been expanded to include transfers in PFA's. The purpose is to assist local governments in the purchase of land for a public facility. Public facilities include recreational, transportation, and educational. Proceeds from any sale must be used to assist in purchasing a public site or constructing a public facility.

Reporting Requirements: The Smart and Sustainable Growth Act of 2009 establishes annual reporting criteria for local governments so the State Department of Planning in coordination with the national Center for Smart Growth can build the necessary data to analyze growth trends and impacts statewide over time. Measures and indicators for reporting include the following textual and mapped information, which will be determined by MDP:

- The amount and share of growth being located inside and outside PFA's;
- The net density of growth in these areas;
- The creation of new lots and the issuance of residential and commercial building permits in these areas;
- The development capacity analysis (updated every 3 years or when significant change occurs in land use/zoning);
- The number of acre preserved with local agricultural land preservation funding (if applicable); and
- Other information on achieving statewide goals under revised state laws.

County and municipal corporations that issue less than 50 building permits per year for new residential units are exempt from the stipulated measures and indicators. However, annual reporting is still expected by a local jurisdiction, whereby the jurisdiction must prove that less than 50 building permits were issued on any given year. Jurisdictions are required to submit their respective reports by July 1, 2010.

Comprehensive Plan Clarification: The Smart and Sustainable Growth Act of 2009 seeks to clarify the role of the comprehensive plan and the adoption of ordinances and regulations in relation to said comprehensive planning. Declaring the intent of the Maryland General Assembly, the purpose is to create consistency with comprehensive plans, which "...should be followed as closely as possible while not being elevated to the status of an ordinance and that deviations from the plan should be rare." Legislative intent also seeks to encourage the development of ordinances and regulations that apply to

locally designated PFA's, promoting mixed uses, sustainable design and development, and incentive based processes consistent with the new visions of the Act enumerated above.

The Smart and Sustainable Growth Act of 2009 requires all local jurisdictions to enact a land use plan and educate planning commission and board of zoning appeals members regarding the planning process. The education course is to be developed by MDP. It also highlights the important role played by citizens that assist in the comprehensive planning process for their respective communities. According to the amendment, "citizens invest countless hours in determining the future direction of their jurisdiction through local comprehensive plans...and...the people of Maryland are best served if land use decisions are consistent with locally adopted comprehensive plans."

THE 2008 MILLINGTON COMPREHENSIVE PLAN UPDATE

The *2008 Millington Comprehensive Land Use Plan* (Comprehensive Plan) revises and updates the 2007 *Millington Comprehensive Plan*. In 2007, Town officials recognized the reality of growth and a proactive approach to growth management was chosen which also highlighted the need to preserve the Town's distinctive character and resources. In this regard, the 2007 Plan incorporated a number of actions for the Mayor and Town Commission and for the Planning Commission to undertake in the near future. Among these initiatives are:

1. Develop a detailed capital improvements plan to ensure that Millington's needs and infrastructure are adequately maintained and capable of supporting the Town's growth;
2. Thoroughly review the Town's existing zoning, based upon the contents and recommendations of this Plan.
3. Develop subdivision regulations for future growth that will allow for orderly development within the Town and protect the Village of Millington;
4. Continue to encourage the revitalization of the older residential neighborhoods and the Central Business District (CBD);
5. Ensure the preservation and rehabilitation of the Town's many older and historic buildings, in accordance with Design Standards.
6. Provide opportunities for new industrial and commercial growth in appropriate areas;
7. Maintain design standards and goals for all new nonresidential construction and alteration;
8. Provide recreational opportunities for all segments of Millington's population; and
9. Ensure the cooperation among all levels of government that directly impacts on the lives of the residents of Millington.

The 2008 update process carries forward these recommendations and addresses recent changes in the laws and regulations of the State of Maryland concerning community planning. As stated in the 1994 *Millington Comprehensive Plan*, a major goal of the Plan was "to create a community with maximum concern for those qualities, which will enhance Millington's value as an attractive place to live." The Plan also stated that Millington is now primarily "a living place for its citizens" therefore "enhancing this environment and discouraging development, which would degrade or detract from the Town's attributes as a living place and center for community facilities is of overall importance." In this regard,

the Town of Millington’s “Vision Statement” is as follows: *“To preserve the historic small town atmosphere of Millington and enhance the qualities, which make the Town a desirable place to live and work.”*

THE MILLINGTON VISION

The Town of Millington’s “Vision” is, *“To preserve the historic small town atmosphere of Millington and enhance the qualities, which make the Town a desirable place to live and work.”* The Plan reflects this future “vision” of Millington offering practical and realistic recommendations for bringing the Town’s vision into reality.

Central to the current appearance and quality of life benefits is the concept of the “Village of Millington” that historic core of the Town that forms its initial development in the 18th, 19th, and early 20th centuries. This includes most of the downtown area along the Chester River. A belief in the village atmosphere and the value of living in a small rural community are identified as important values. Accordingly, this Plan has been prepared to help ensure that the Millington continues to prosper and remains a viable municipal entity.

What Millington will look like in the future depends, in part, on the community’s vision as expressed in its plans. It also depends on how effective that vision is translated into the regulatory process (implementation). It is the goal of this planning process to provide recommendations that address the Town’s implementation objectives. This includes the sufficiency of existing regulations, processes, and procedures. It also includes strategies related to staffing and funding, infrastructure, administration, and resource management.

In order to fulfill this mission, a set of goals, objectives, and recommendations have been developed to guide and manage Millington in a manner appropriate to the vision for the future. Goals are based on the desire to maintain the community and promote orderly growth. They also are based on the concept of growth management as developed by the State of Maryland, which encourages the revitalization of traditional communities such as Millington, while encouraging appropriate new development.

The Comprehensive Plan is not intended to be a static document. It should be reviewed and updated periodically (every five or six years) to reflect new development trends, shifts in the economy, or changes in the community's goals and objectives.

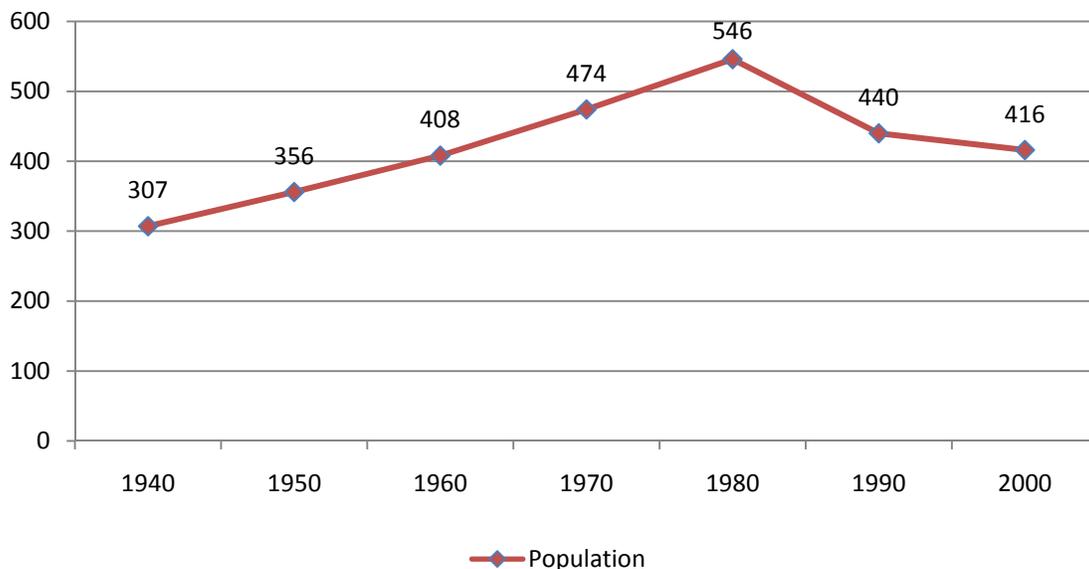

Chapter 1 Existing Conditions

POPULATION

Millington is located in Kent County and Queen Anne’s County. Nearly all of the land within the Town’s municipal boundary is located in Kent County. Therefore, municipal comparisons in this section are made with towns in Kent County.

Of the five municipalities in Kent County, the Town of Millington has the third largest population and accounts for 2% of the County’s total population. A review of the Town’s population trends in the mid-20th century indicates a steady increase in Town residents from 1940 to 1980, when the population peaked at 546 (see Figure 1). However, between 1980 and 1990, the Town lost 106 residents – almost a quarter of its population (20%).

FIGURE 1-1: Millington Population Trends 1940 - 2000

Source: U.S. Census

Only one other municipality, Galena, experienced a decline in population during this period. Galena’s decrease was much smaller (13%) and was overcome in the 1990s, when its population increased by 32%. While one or two of the smaller towns in the County have lost residents or grown only slightly over the past two decades, Chestertown, the County Seat, has experienced a significant increase in population – over 40% between 1980 and 2000.

In the decade between 1990 and 2000, Millington lost about 5% more of its population, decreasing from 440 to 416 people (see Table 1-1). This was an improvement over the previous decade, however Millington was again ranked as one of only two towns in the County to lose population in the 1990s – this time the other town was Rock Hall, which lost 188 people, or 12% of its population.

Classification	1980	1990	1980-1990 % Change	2000	1990-2000 % Change
Kent County	16,695	17,842	7%	19,197	8%
Betterton	356	360	1%	376	4%
Chestertown	3,300	4,005	21%	4,746	19%
Galena	374	324	-13%	428	32%
Millington	546	440	-20%	416	-5%
Rock Hall	1,511	1,584	5%	1,396	-12%

Source: U.S. Census

POPULATION ESTIMATES

In 2007, the Maryland Department of Planning (MDP), using U.S. Census data, estimated that Millington’s population declined annually between 2000 and 2006 (with the exception of an increase of 2 persons in 2002) at an average annual rate of slightly over 1% per year and with an overall decrease during the period of 4.3% (see Table 1-2). Millington and Betterton are the only municipalities in the County for which MDP estimated a decline in population.

Classification	2000	2001	2002	2003	2004	2005	2006	% Change
Kent County	19,275	19,426	19,585	19,678	19,747	19,908	19,983	4%

POPULATION AGE & SEX CHARACTERISTICS

Population distribution among age groups in Millington remained nearly unchanged between 1990 and 2000. Persons aged between 25 and 44 years old (prime working age) comprise the largest percentage of the Town’s population, 30% (in 1990 this figure was 31%). Children under 18 years old comprise the next largest percentage of the population, 26% (24% in 1990). The middle-aged population (ages 45 to 64) accounts for just over 20% of the total population (unchanged from 1990), and senior citizens represent 16% of the population (unchanged from 1990). Young adults aged 18 to 24 comprise only 8% of the Town’s population, as they did in 1990.

In the 2006 Kent County Comprehensive Plan, the County noted that: “Analysis of natural increases in population (births, minus deaths) and the distribution of population by age groups in Kent County indicate that there is an out-migration of young adults and an in-migration of older age groups, especially those of retirement age.”¹

These two trends would seem to offset each other, however, although Millington’s young adult population is likely out-migrating in pursuit of higher education or employment opportunities, there is no evidence of any compensatory in-migration of senior citizens to Millington. The numbers of seniors and young adults as percentages of the total population remained low and unchanged from 1990 to 2000.

Millington has a higher ratio of males to females than any other town in Kent County and the County itself. For every 100 females there are 93 males (see Table 1-3).

Table 1-3: Comparison of Population Age Characteristics – 2000

Classification	Total population	Percent of total population					Median age (years)	Males per 100 females
		Under 18 years	18 to 24 years	25 to 44 years	45 to 64 years	65 years and over

Source: 2000 U.S. Census

Interestingly, Millington has a high percentage of disabled persons. Of the civilian population over five years old, 28% are disabled. Among persons aged 21 to 64, Millington has the highest percentage of disabled civilians in the County, and the second highest percentage of disabled civilians aged 65 and older (see Table 1-4). Of the Town’s disabled population, one quarter (25%) has physical disabilities, slightly more than 14% are mentally disabled, and 5% have sensory disabilities (blindness, deafness, etc.). Nearly one third (28%) of the members of the disabled population between the ages of 16 and 64 has an employment disability².

POPULATION RACE CHARACTERISTICS

In 1990, whites and African Americans were the only two racial groups represented in Millington’s population. Approximately 92% of the Town’s residents were white, and the remaining 8% were African American. Between 1990 and 2000 both these races declined as percentages of the total population, the white (alone) population by 7% and the black population by 1%, bringing the percentage of whites (alone) to 85% and the percentage of African Americans to 7% in 2000. Hispanics, not present in the Town in 1990, comprised nearly 10% of the population in 2000. While only two towns in the County – Rock Hall and Chestertown – had Hispanic populations in 1990, all towns had Hispanic populations in 2000.

Table 1-5: Comparison of Population Race Characteristics – 2000

Classification	One race						Two or more races	Hispanic or Latino (of any race)	White alone, not Hispanic or Latino
	White	Black or African American	American Indian and Alaska native	Asian	Native Hawaiian and Other Pacific Islander	Some other race

POPULATION HOUSEHOLD & FAMILY CHARACTERISTICS

In 2000, two-thirds (66%) of Millington’s households were families. This is the second lowest percentage of families in the County, exceeded only by Chestertown, where nearly a quarter of the population lives in group quarters due the presence of Washington College in the town (see Table 1-6). While Millington had fewer families, it had more people per family on average than any other town in Kent County and the County itself in 2000. Conversely, Millington had less people per household on average than any other town in Kent County and the County itself.

Table 1-6: Comparison of Household and Family Characteristics – 2000					
Classification	Percent of total population			Average number of persons per family	Average number of persons per household
	In households		In group quarters		
	In families	Nonfamily householders and non relatives of householder			
Kent County	75%	18%	7%	2.33	2.81

Source: 2000 U.S. Census

Between 1990 and 2000, the number of family households in Millington decreased by 5% (see Table 1-7). Non-family households increased by the same amount. The number of householders living alone also increased, including single householders over age 65.

Table 1-7: Millington Household Characteristics – 1990 and 2000		
Classification	1990	2000

Average Household Size	N/A	2.55

Source: 2000 U.S. Census

The 2000 U.S. Census reported that nearly half (47%) of Millington’s population was married. With the exception of Chestertown (which has a large student population), Millington has a lower percentage of married people than all the other towns in Kent County and the County itself (see Table 1-8). Correspondingly, Millington also has one of the highest percentages of people, who have never been married in the County, second only to Chestertown (again, attributable to the large student population). About 50% of Millington’s family households contain married couples.

Table 1-8: Comparison of Marital Status Population Aged 15 and Older - 2000

POPULATION EDUCATION CHARACTERISTICS

Elementary school students make up the largest percentage of children enrolled in school in Millington (see Table 1-9). Millington has the highest percentage of elementary school students in the County. In 2000, compared to other towns in Kent County, Millington had a slightly higher percentage of adults, who have less than a ninth grade education, and a fairly significant lower percentage of adults with high school degrees or higher. Only 3% of those enrolled in school in Millington are enrolled in college or graduate school, by far the lowest percentage in the County. This corresponds to the very low percentage of young adults between 18 and 24 living in the Town.

Table 1-9: Comparison of School Enrollment & Educational Attainment - 2000

Geographic area	Population aged 3 and over and enrolled in school				Population aged 25 and over		
	Enrolled in nursery, pre-school, or kindergarten	Enrolled in elementary school	Enrolled in high school	Enrolled in college or graduate school	Percent with less than a 9th grade education	Percent high school graduate or higher	Percent with bachelor's degree or higher

EMPLOYMENT & INCOME

About 50% of the employed population in Millington works in jobs in Kent or Queen Anne’s County. About 12% of that group works in Millington. An estimated 24 business establishments in the Town provide full and part-time jobs, mostly in the service industry. The remaining half of the workforce is evenly divided between people who work outside of Kent or Queen Anne’s County but still in Maryland and people who work outside of Maryland.

The average commute time for Millington’s employed residents is 24 minutes; a few minutes shorter than the average commute of employed residents in all but one of the other towns in the County (see Table 1-10). Of those residents, who work outside of the home, the highest percentage spend from 5 to 9 minutes traveling to work, followed by equal percentages of people making 20 to 24-minute commutes and 30 to 34-minute commutes (see Table 1-11). Equal percentages of workers travel 15 to 19 minutes to work and 45 to 59 minutes to work.

Classification	Mean Travel Time to Work (minutes)
Kent County	25
Betterton	27
Chestertown	17
Galena	29
Millington	24
Rock Hall	27

45-59 minutes	12%
60-89 minutes	4%
90 minutes or more	1%

Source: U.S. Census, Maryland Department of Planning

One quarter of Millington’s workforce is employed in sales and office occupations; more than in any other occupation category (see Table 1-12). With the exception of Betterton, all other towns in the County have the largest percentage of their workforces employed in management, professional and related occupations, traditionally the highest paying jobs in the State³. This category employs 18% of Millington’s workforce.

³ Maryland Department of Planning, U.S. Census Center for Economic Studies, 2007

Production, transportation and material moving occupations employed the second largest number of workers, 19%. Construction, maintenance and extraction occupations employ the fourth largest percentage of the population, followed by service occupations and finally, farming, fishing and forestry occupations.

Within industries, retail trade was the largest employer in the Town, followed by manufacturing and construction, which was similarly the case with other towns in the County. Retail and manufacturing led employment within industries in Millington in 1990 as well. Jobs in the construction industry doubled between 1990 and 2000, employing 6% of Millington’s work force in 1990 and 12% in 2000. Employment in the business and related services and public administration industries also increased significantly between 1990 and 2000. Employment in the transportation industry had the highest decline, falling from 8% of all jobs in 1990 to slightly over 1% in 2000.

Table 1-12: Comparison of Employment in Occupations and Industries - 2000

Employed Population Aged 16 and Older										
Classification	By occupation						In industry			Percent gov't workers (local state, or federal)
	Management, professional, administrative	Services	Sales and office	Farming, fishing, forestry	Construction, extraction, maintenance	Production, transportation, material moving	Retail Trade	Manufacturing	Construction

In 2000, 70% of the population aged 16 and older in Millington was in the labor force (see Table 1-13). This was a higher number of workers as a percentage of the employable population than any other town in the County and the County itself. All but 1% of the labor force is employed in civilian occupations (i.e., not in any of the Armed Forces). Millington also has a larger percentage of unemployed members of the labor force; in some cases nearly double that of other towns in the County (see Table 1-13).

Table 1-13: Comparison of Employment Status - 2000

Population 16 years and over	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
In labor force	70%	65%	56%	66%	65%	62%
Civilian labor force	69%	65%	56%	66%	65%	62%
Employed	64%	65%	53%	65%	62%	59%

Not in labor force	30%	35%	44%	34%	35%	38%

Source: 2000 U.S. Census

In 2000, Millington ranked second among Kent County towns in median household and median family incomes, and was higher than the County itself in both categories (see Table 1-14). These are interesting statistics, given that the largest percentage of working residents of Millington are employed in occupations that traditionally pay less than those employing most of the residents of other towns (see Table 1-12). This could be attributable to the higher number of people per family (i.e., potentially more wage earners per family) or to the fact that more than one-third of Millington’s workers have a commute of 30 minutes or more, which would place them in metropolitan employment centers where pay scales tend to be higher than in rural areas.

Per capita income in Millington ranks in the middle of Kent County towns (see Table 1-14). On average, male workers earn about 5% more than female workers.

Table 1-14: Comparison of Income and Earnings - 2000

Classification	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Median household income	\$45,893	\$36,477	\$31,530	\$47,813	\$32,833	\$39,869
Median family income	\$48,750	\$38,750	\$40,960	\$53,068	\$38,672	\$46,708
Per capita income	\$20,240	\$24,848	\$18,769	\$18,858	\$20,521	\$21,573
Median earnings*						
Male workers	\$29,917	\$31,250	\$27,283	\$35,096	\$29,375	\$31,899
Female workers	\$28,500	\$27,188	\$25,513	\$22,500	\$21,429	\$24,513

* For full-time, year-round workers

Source: 2000 U.S. Census

In 2000, about 10% of Millington’s families and more than 10% of its individuals were living below poverty level (see Table 1-15). Nearly one quarter of the individuals living in poverty were children under 18 years old. Millington is the only town in the County with no one aged 65 or older living in poverty.

Table 1-15: Comparison of Poverty Status (Below Poverty Level) - 1999

Percent of:	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Families below poverty level	9%	6%	13%	2%	11%	9%

Chapter 2 Goals & Objectives

The following goals and objectives build on the Vision of Millington as it is articulated in this Comprehensive Plan. Goals are broad and represent clearer statements of the Town's Vision. Goals also are statements of the policy direction for Millington and the overarching guidelines for choosing tasks to achieve effective implementation. Objectives are specific steps required to achieve goals. Implementation strategies are the measurable tasks as actions, which are developed to achieve objectives.

LAND USE

GOAL: Retain the unique character of Millington even as growth occurs.

- Objective #1: Encourage compatible growth and reinvestment in existing properties.
- Objective #2: Protect existing residential neighborhoods from incompatible uses
- Objective #3: Preserve significant historic structures and maintain the historic character and cultural heritage of Millington.
- Objective #4: Encourage and facilitate infill and redevelopment within the Town to accommodate future population.
- Objective #5: Ensure that public lands are used in a manner that best serve the needs of the population.

GROWTH MANAGEMENT

GOAL: Ensure development is consistent with the overall growth goals and objectives of the 2008 Millington Comprehensive Plan.

- Objective #1: Ensure that new growth is consistent with the State's eight visions, as described in the Planning Act and "Smart Growth" principles.
- Objective #2: Promote controlled and compact development patterns that reflect good design practices, make efficient use of available land, and locate development convenient to facilities, services, and amenities to defray future impact costs.
- Objective #3: Establish a rational Town growth plan and address associated impacts on facilities, services, and infrastructure.

- Objective #4: Analyze the impacts of new growth and development on Town services, facilities, and infrastructure.
- Objective #5: Address potential impacts of growth and development in the Town’s 5-year Capital Improvements Program (CIP) and annual capital budgets.
- Objective #6: Improve inter-jurisdictional coordination and cooperation with Kent County and Queen Anne’s County.
- Objective #7: Update Town development regulations to implement recommendations of this Plan.
- Objective #8: Adopt standards and guidelines that reflect the Town’s expectations concerning development and development design.

COMMUNITY FACILITIES

GOAL: Provide adequate public facilities and services to ensure the health, safety and welfare of Town residents.

- Objective #1: Ensure that all current and future residences and businesses have adequate public services and facilities necessary to protect the public health, safety, and welfare to promote an attractive environment in which to live and work.
- Objective #2: Plan for the appropriate expansion of the Town’s water and wastewater systems.

WATER RESOURCES

GOAL: Maintain and protect an adequate and safe water supply to serve current and future residents of Millington.

- Objective #1: Protect an adequate water supply to serve the residents of Millington and collaborate with Kent County and Queen Anne’s County to serve current and future populations through 2030.
- Objective #2: Take steps to restore and protect water quality and contribute toward meeting water quality regulatory requirements in rivers and streams in the Upper Chester River Watershed. This will require addressing current water quality impacts as well as future impacts from land development and population growth.
- Objective #3: Protect the habitat value of rivers and streams.

- Objective #4: Work with Kent County, Queen Anne’s County, and the Towns of Sudlersville and Barclay, which also are located in the Upper Chester River Watershed, to develop watershed planning and management guidelines that relate land use and development to their impacts on water resources.
- Objective #5: Work with Kent County and Queen Anne’s County to develop a plan for addressing the needs of property owners with failing septic systems, identified by County agencies, who live near Millington.
- Objective #6: Develop Town-wide water conservation methods and policies and encourage innovative technologies for stormwater management such as bio-roofs, rain gardens, rain barrels, and street-side buffer areas for home and business owners.

RESOURCE CONSERVATION

GOAL: Preserve and protect the natural resources and features of Millington and its surrounding environs to ensure a balance between development and the need to protect indigenous resources and/or features.

- Objective #1: Require development design be done in a manner that will preserve significant natural features and other resources.
- Objective #2: Encourage energy conservation, “green building” design, and low-impact development that follows LEED (Leadership in Energy and Environmental Design) guidelines.
- Objective #3: Work with Kent County, Queen Anne’s County, and the State of Maryland to develop appropriate strategies for the enhancement and protection of green infrastructure and the Town’s greenbelt.
- Objective #4: Promote environmental stewardship.
- Objective #5: Minimize adverse impacts on water quality.
- Objective #6: Conserve fish, wildlife, and plant habitats.
- Objective #7: No net loss of wetlands, forests, and stream buffers.

TRANSPORTATION

GOAL: Ensure the safe and efficient movement of people and goods.

- Objective #1: Integrate land use and the street and highway networks to provide for the logical continuation and improvement of existing streets and highways in proper coordination with the State, County, and municipal facilities in existence.
- Objective #2: Minimize the adverse effects of vehicular traffic on local residential streets.
- Objective #3: Maximize the capacity, safety, and efficiency of the existing street and highway system.
- Objective #4: Improve pedestrian safety by providing safe routes for pedestrians and non-motorized transport.

HOUSING

GOAL: Safe, decent, and affordable housing for Town residents.

- Objective #1: Encourage investment in existing housing where needed to improve quality.
- Objective #2: Encourage and facilitate replacement of substandard dwelling units with units meeting current building and housing code standards.
- Objective #3: Provide for stronger enforcement of building and housing code standards for existing rental and other units.

COMMUNITY DESIGN

GOAL: Community design based on sound place-making principles.

- Objective #1: Articulate community design aspirations through design guidelines.
- Objective #2: Find a balance in community design, environmental protection and resource conservation which results in a superior outcome.
- Objective #3: Encourage a community wide rehabilitation effort to upgrade the structural condition of all buildings and to remove derelict structures.

HERITAGE PRESERVATION

GOAL: Preserve and promote Millington's heritage resources.

- Objective #1: Encourage the appropriate preservation of historical, cultural, archeological, natural, and scenic resources and designate special status for the most important landmark historic structures and sites
- Objective #2: Improve the inventory of historic sites, structures, and heritage attractions.
- Objective #3: Encourage and support heritage preservation through mapping, planning, and regulatory mechanisms.
- Objective #4: Coordinate strategies to achieve mutual heritage preservation goals and objectives between the Town and Kent and Queen Anne's Counties.
- Objective #5: Encourage industries that support heritage preservation and promote heritage tourism initiatives to improve the economic climate of the downtown.
- Objective #6: Encourage the adaptive reuse of historic properties including the integration of historically sensitive modern construction materials that achieve energy efficiency.

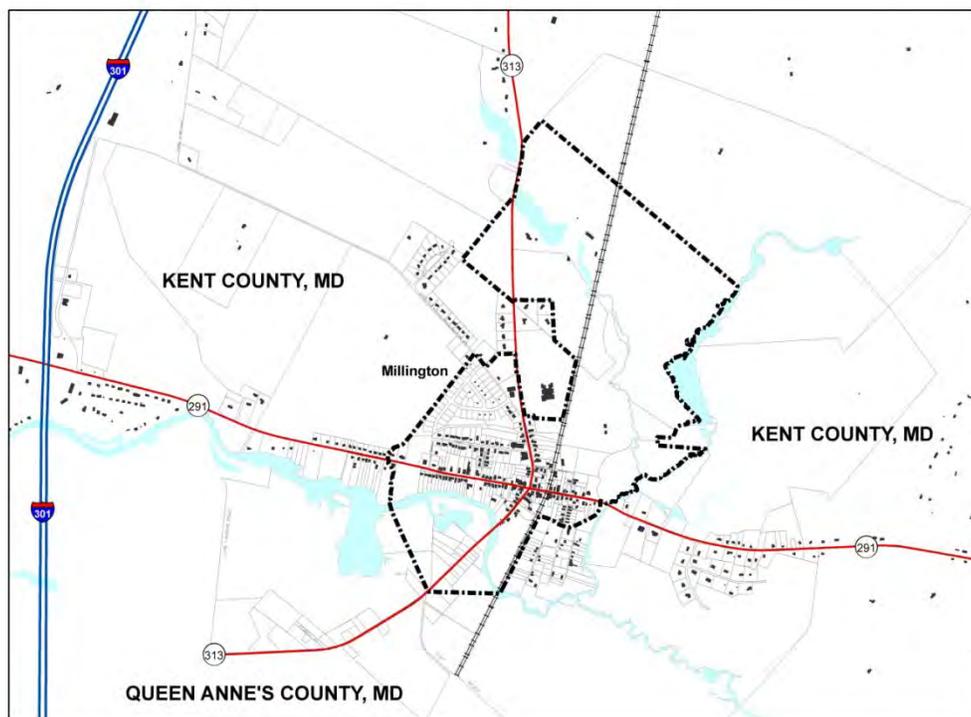

Chapter 3 Land Use & Growth Management

The “Land Use Plan” is a primary component of the 2008 *Millington Comprehensive Plan*, describing the preferred land use characteristics for various areas of the Town that are deemed to be consistent with the Town’s vision and support land use goals and objectives. The Comprehensive Plan defines land use planning areas as the basis for decisions concerning land use regulations, transportation improvements and programming public facilities.

BACKGROUND

The Town of Millington, Maryland is partially located in Kent and Queen Anne’s Counties on Maryland’s Eastern Shore. A majority of the Town is located in Kent County. Both Counties border Kent County in Delaware. Millington is located on the Upper Chester River, a major tributary in the region. The Chester River is part of the Chesapeake Bay estuary. As depicted on the “Location Map” below, major arterials for the region include U.S. Route 301 and Maryland Routes 313 and 291. Millington is primarily served by U.S. Route 301.

LOCATION MAP: MILLINGTON, MARYLAND

The Land Use Plan Element begins with a discussion of existing land use, a major determinant of future land use patterns. Following is a description of the land use “Planning Areas,” which generally describes the desired character and mix of land use types by geographic location in the Town. The planning areas provide guidance for development regulations to implement the salient features of each area (See Chapter 11: Implementation). To varying degrees the Town’s objectives for economic development, natural resource protection, mobility, community facilities, housing, and community character are all reflected in the Land Use Plan. The fundamental land use policy framework outlined in this Chapter will help determine the Town’s growth and development patterns as well as the quality of life for existing and future residents.

The Town of Millington in Kent County, Maryland began as a crossroads village situated around an historic mill-race. Much of the traditional architecture and character of Millington can be found in its downtown area and along the Chester River, which winds through the Town.

The Land Use Plan is a policy tool for sound fiscal and environmental planning. It directs growth and development to areas with existing or planned infrastructure and accounts for the need to manage the impacts of growth and development on water quality, natural resources, and environmentally sensitive areas. The Land Use Plan has been developed

with consideration of a number of critical growth and development factors. These factors included existing and planned infrastructure and the capacity for growth associated with community facilities. Land and natural resources consumption were considered as indicators of progress toward sustainability of the Town’s growth patterns as were fiscal impacts related to provision of adequate public facilities.

EXISTING LAND USE

As shown on Map 3-1, the 2005 Maryland Property View (MPV) for Kent County and Queen Anne’s County, as prepared by the Maryland Department of Planning (MDP) and Maryland Taxation & Assessments, provides several land use categories for State data in the Millington Study Area. The Study Area encompasses approximately 2,546 total acres. Two (2) land use categories, “Residential and Agriculture,” account for 91% of the existing land use in the defined area. “Exempt and Exempt Commercial” uses are the third and fourth largest land use categories at 129 acres total or 5% of the Study Area. These land uses are typically public or public/private entities, such as non-profits and government institutions etc. that have a unique tax status in the State. Commercial uses account for 94 acres of the Study Area, approximately 4% of the total land area.

Table 3-1: Existing Land Use – Millington Study Area (MPV 2005)

Land Use Category	Acres	Percent of Total
Residential	409	16%
Commercial	94	4%
Exempt	75	3%
Exempt/Commercial	54	2%
Agriculture	1,914	75%
TOTAL	2,546	100%

Source: Peter Johnston & Associates, LLC

The existing Town of Millington encompasses approximately 456 acres. Two (2) land use categories, “Residential and Agriculture,” account for 360 acres or 78% of the existing land use in the Town. “Exempt and Exempt Commercial” uses account for 25 acres or 6% of Millington. Commercial uses account for 16 acres, approximately 4% of the Town’s total land area. “Other Land Uses” include roads, sidewalks, and other infrastructure as well as existing waterways. These land uses total approximately 55 acres or 12% of the Town.

Table 3-2: Existing Land Use – Town of Millington (MPV 2005)

Land Use Category	Acres	Percent of Total
Residential	98	21%
Commercial	16	4%
Exempt	1	1%
Exempt/Commercial	24	5%
Agriculture	262	57%
Other Land Uses	55	12%
TOTAL	456	100%

RESIDENTIAL USES

As of 2008, most of Millington’s residential units are located in the “Old Town” portion of the municipality. Old Town Millington evolved as a traditional crossroads village at the intersection of Cypress (MD Rt. 291) and Sassafras Streets (MD Rt. 313). Millington is bounded on the west side of Town by School Street and on the north end by the Chesterville/Millington Road. On the east side of Town, it is bounded by Pippin’s Marsh. The corporate boundaries of Millington end just short of High Bridge Road to the south in Queen Anne’s County.

The average lot size in Millington is approximately 18,000 square feet, or about a half of an acre. As a measure of efficiency, most of the Town’s residential units have been accommodated on approximately 21% of the municipality’s total land area of 456 acres. Newer residential development in the Town such as Mill Village, have an average lot size of approximately 16,048 square feet. Millington has “Multi-Family Residential” uses in the Old Town, which are not indicated on the MPV. This includes apartments.

COMMERCIAL

Commercial land uses total approximately 16 acres or 4% of Millington. Commercial land uses in Millington include the Town's historic Central Business District and other commercial establishments located near the old railroad line. In addition, concentrated commercial land uses are located in both Kent and Queen Anne's Counties near Millington.

Kent County commercial land uses are located west and east of Millington at the intersection of MD Rt. 291 and U.S. Route 301 to the west as well as along MD Rt. 291 to the east, just outside the Town's corporate boundaries. In the south, commercial land uses are indicated in Queen Anne's County along MD Rt. 313 (Sudlersville/Millington Road). Commercial uses in the described areas include industrial warehousing, agriculture related processing facilities, a bank, and a large-scale grocery store (Food Lion).

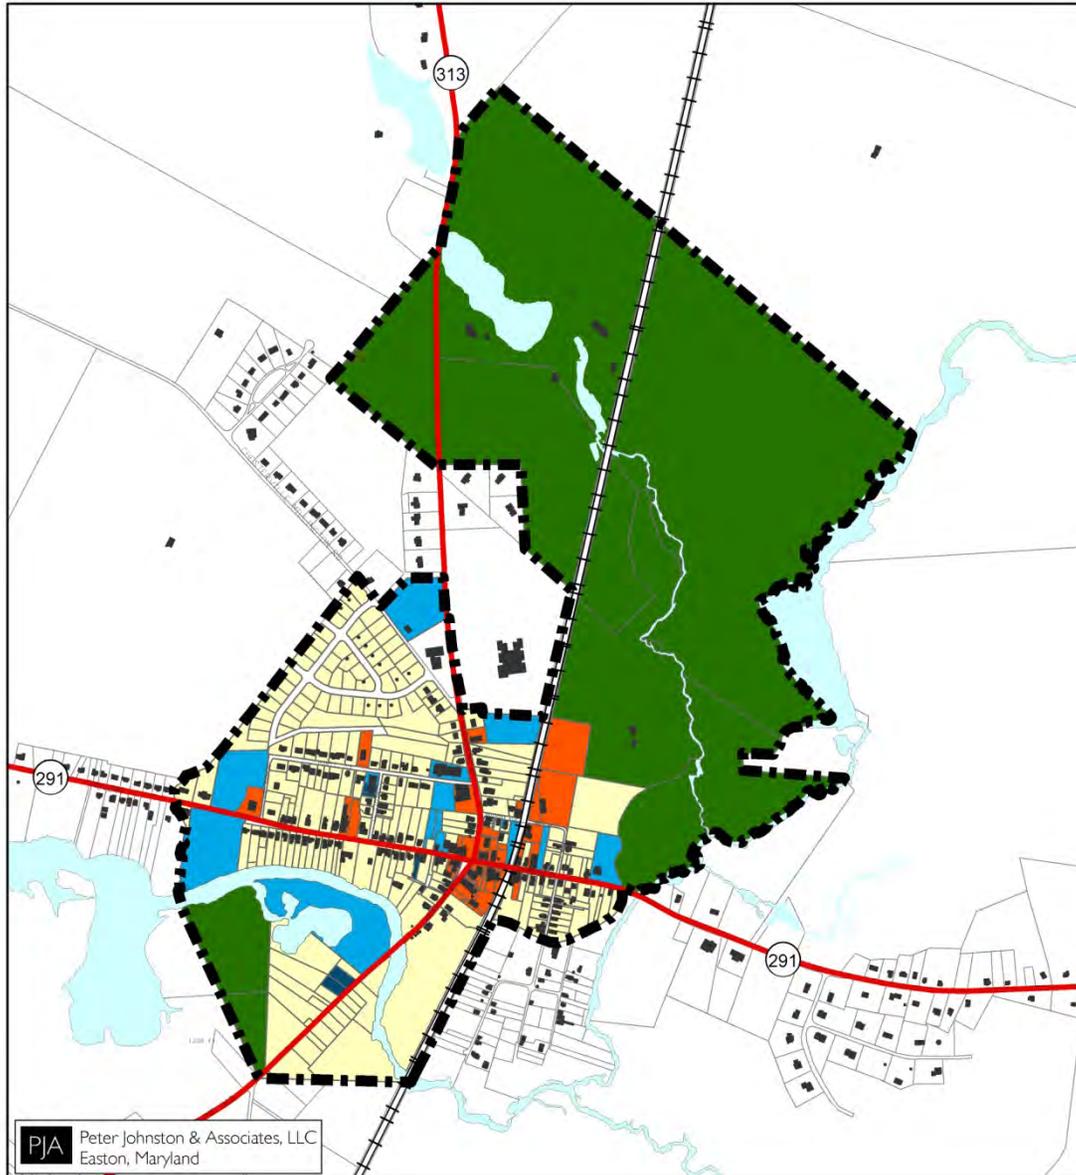

PUBLIC USES

Public institutions (exempt and exempt/commercial land uses) include the Millington Town Hall, the Fire Department, government owned lands, and many local churches (see Map 4-1: Community Facilities). In addition, other lands are utilized for public use in Millington including parks, streets, roads, right-of-ways, rail road lines, collection systems, pump stations, and the wastewater treatment plant site.

The largest institutional use is the Millington Elementary School, a Kent County Board of Education property. It is located on 26 acres, 2 of which are located in the Town. Currently, there are several parks located in the Town; the Millington Waterfront Park located along the Chester River near the wastewater treatment plant, Robvanary Park, the Millington Skateboard Park, and the Millington Community Pool.

AGRICULTURAL USES

Many large agricultural parcels are located in the Millington Study Area. According to the 2005 MPV for Kent County and Queen Anne's County, agricultural land uses total 75% of the Millington Study Area (1,914 acres). Approximately, 262 acres of agricultural land are currently located within Millington's corporate boundaries. These represent areas for new development and constitute the bulk of Millington's infill potential.

LAND USE PLAN

GOAL: Retain the unique character of Millington even as growth occurs.

- Objective #1: Encourage compatible growth and reinvestment in existing properties.
- Objective #2: Protect existing residential neighborhoods from incompatible uses.
- Objective #3: Preserve significant historic structures.
- Objective #4: Encourage and facilitate infill and redevelopment within the Town to accommodate future population.
- Objective #5: Ensure that public lands are used in manners that best serve the needs of the population.

FUTURE LAND USE

As shown on Map 3-2: Land Use Plan, Millington divides the Town into ten separate planning areas, each of which reflects the Town’s objectives concerning the most appropriate and desirable pattern for the general location, character, extent and interrelationship of the uses of public and private land.

Land Use Category	Acres	Percent of Total
Town Center	11	3%
Old Town Residential	43	9%
Suburban	39	9%
Rural Residential	25	5%
Planned Neighborhood Development	228	50%
Employment	38	8%
Public/Semi-Public	18	4%
Parks & Open Space	11	3%
*Other Land Uses	43	9%
**Conservation Areas	140	N/A
TOTAL	456	100%

*Note: “Other” land uses include streams, water bodies, roads, sidewalks, the railroad line etc.

**Note: “Conservation Areas” overlay existing properties and therefore is not accounted for in the total acreage of the Town.

Final Version 05/27/09

LAND USE PLANNING AREAS

Town Center

The “Town Center Planning Area” encompasses 62 parcels totaling approximately 11 acres. This Planning Area contains a mix of private and public uses including a relatively equal mix of retail, service, and civic uses as well as residential uses, including detached single family and apartment units.

Millington’s land use objectives for the Town Center Planning Area are to:

- Focus business development in the centralized downtown area.
- Require the scale and appearance of businesses strongly reflects the small town, rural atmosphere of Millington.
- Direct Town revitalization efforts on the downtown area.
- Create a pedestrian friendly environment with adequate public parking to support local businesses and civic uses.

The Town Center is and will continue to be the primary location of commercial activity in Millington. The shops and service establishments located here serve residents and nearby neighbors as well as the surrounding area outside of Town.

The Town Center is readily identifiable by traditional development patterns that include buildings fronting on the street and on-street parking with parking lots located to the side and rear. Most of the buildings were built prior to 1950 and reflect the Victorian architectural characteristics common to the period 1900 through 1925. The prevailing architectural features of these buildings are major determining factors of the unique character of the Town.

Maintaining the Town Center as a viable commercial area will be a challenge. There is little vacant land for expansion. Where there is vacant land it seems better suited for parking than for building sites. If infill and redevelopment is proposed, it should be done in a way that reflects the existing land development pattern and the architectural character of the Planning Area. Site design should ensure new buildings face on and come up to meet the street, parking should be situated at the rear or side of buildings and the site should be connected to the existing sidewalk system.

Development regulations for the Town Center should be designed to achieve several objectives. First, regulations should encourage and allow for a broad range of uses including business, retail sales, services and office in existing buildings. Development standards for infill and redevelopment in this Planning Area should be flexible for new commercial, business retail, and service uses. New single family uses should not be allowed but at the same time regulations should not unduly impede redevelopment of existing single family dwellings. Residential apartments should only be permitted on the second and third floors of existing businesses. Conversion of buildings into apartment should not be allowed where it preempts first floor non-residential use. New multi-family residential structures should not be allowed.

Accommodations such as country inns or bed and breakfasts may be permitted as an adaptive reuse of existing buildings. Infill and redevelopment standards, including height, lot area and yard requirements should be flexible to encourage appropriate infill and redevelopment. Parking standards also must take into account nearby public parking and allow for alternative parking solution such a satellite and shared parking arrangements.

Old Town Residential

The “Old Town Residential Planning Area” abuts the Town Center on four sides. This planning area contains approximately 43 acres on 101 parcels, primarily in detached single family use. The Planning Area encompasses the preeminent historic structures in the town. Nearly 70 percent of the structures are two-story residences built prior to 1925.

Millington’s land use objectives for the Old Town Residential Planning Area are to:

- Maintain the existing character of this residential neighborhood.
- Allow appropriate infill and redevelopment that reflects the site development and architectural characteristics of the Planning Area.
- Encourage preservation of landmark structures located in the Planning Area.

Permitted uses in this Planning Area should be limited to detached single family residential and customary accessory uses. Conversion of multi-family use of residential buildings, not specifically designed and intended as multi-family structures, should not be allowed. Because of the historic importance of these neighborhoods The Town should consider adopting a local historic district for this Planning Area. At a minimum, strict appearance and development standards should apply to infill and redevelopment.

Suburban

The “Suburban Planning Area” encompasses about 39 acres and includes 117 individual parcels. Building lots in the planning area range in size from slightly less than 5,000 square feet to one acre, with the average lot being about one third of an acre. This Planning Area is composed of predominantly detached single family dwellings built in the late 1940s through the late 1980s. It also includes Mill Village a very recently approved 53-lot residential subdivision. Mill Village is currently about 70 percent complete.

These are stable residential neighborhoods located within a short walking distance of Robvanary Park and the Town Center. Development standards for this Planning Area should protect the area from incompatible land use uses, while permitting appropriate infill and redevelopment. This is particularly important for vacant and underutilized properties in the Queen Anne’s County portion of the Town, which occupy the Town’s southern gateway. This area of the Town is currently zoned R-1 Residential.

Public improvements to enable safe pedestrian and bicycle travel and calm traffic should be considered where appropriate.

Millington’s objectives for the Suburban Planning Area are to:

- Protect the single family residential character in these established neighborhoods.
- Encourage appropriate infill and redevelopment consistent with the existing character of the surrounding neighborhood.

Rural Residential

The “Rural Residential Planning Area” encompasses eleven parcels totaling approximately 25 acres and is located on the Queen Anne’s County side of the Chester River. There is very limited infill potential in this Planning Area due to a number of constraining factors, including the Chesapeake Bay Critical Area, floodplain, hydric soils, and sensitive forest habitat.

Millington’s objectives for the Rural Residential Planning Area are to:

- Maintain low density residential uses.
- Improve the appearance of this gateway to the Town.
- Conserve sensitive environmental features.

Development standards for this Planning Area should emphasize the protection of sensitive environmental areas and wildlife habitats of concern to the State. The Town should continue the Resource Conservation Area classification for these properties and not permit use of Critical Area Growth Allocation in the Planning Area.

Planned Neighborhood Development

The “Planned Neighborhood Development Planning Area” is located to the north of the Town Center. There are approximately 228 acres in the planning area, all owned by the same entity. The Planning Area is the largest infill area within the Town. Although, the Planning Area contains fairly extensive undevelopable or constrained land, including nontidal wetlands, hydric soils, floodplain, and sensitive species habitat, the upland can support substantial development.

Once developed, this Planning Area has the potential to greatly impact the existing character of the Town.

Development of these properties will substantially increase the number of dwelling units and population in Millington. In addition, there will be impacts on Town services and facilities.

Impacts on Community Character - Development in the Planned Neighborhood Planning Area, and on any significant addition to the Town, should be based on principles of urban design inherent in all great places. Urban design is directly related to the community character, concerns that echo throughout the recently adopted Comprehensive Plan.

Urban design is the attempt to give form, in terms of function and beauty, to entire areas or whole towns or cities. The focus is on the massing and organization of buildings and on the spaces between them, rather than on the design of individual structures. Its principle features are:

- Neighborhoods have a center and edge;
- Walkable—usually five-minutes from center to edge;
- Contain a mix of uses and building type;
- Have an integrated street network; and
- Reserve special sites for special buildings.

It is the Millington’s intent that new large-scale developments become linked and integral parts of the existing Town area and reflect the scale and character of the existing community. This can be best accomplished by establishing a flexible design process based on traditional place making principles. These include:

- Neighborhoods accommodate and promote pedestrian travel equally as much as motor vehicle trips;
- Design results in residentially scaled buildings fronting on, and generally aligned with, streets;
- Neighborhoods contain a diversity of household types, age groups, and income levels;
- Building and site development patterns reflect the traditional patterns found in the Town, including an interconnected and rectilinear pattern of streets and blocks, which balance the needs of pedestrians and automobiles alike;
- Neighborhoods are functionally diverse, but visually unified, and focused on central squares;
- Social interaction is promoted through the use of neighborhood greens, landscaped streets, boulevards, and “single-loaded” parkways (with homes located on one side of the street only) woven into street and block patterns to provide space for civic activity, parks, and visual enjoyment;
- Buildings for civic or religious assembly or for other common or institutional purposes that act as visual landmarks and symbols of identity are provided;
- Open space, sensitive environmental systems, scenic vistas, and natural areas are preserved; and
- Design flexibility is permitted in order to achieve an appropriate mix of residential and non-residential building uses.

Development standards for this Planning Area should provide for a master planned development. Some specification includes the following:

1. Allow density of up to 3 dwelling units per net acre for a Planned Neighborhood Development (PND).
2. Require a minimum of 20 percent open space.
3. Development standards should reflect development capacity limitations where present.
4. Require the “Conservation” Planning Area, as shown on Map 3-2, may not be counted against minimum open space requirement.

Employment

The “Employment Planning Area” consists of approximately 38 acres. Except for about 5 acres which is current used for an existing grain storage facility (east of the rail line) and a flex space warehouse facility (at the intersection MD 313 and Chesterville-Millington Road) the planning area is vacant. Development of these properties presents an opportunity to increase local employment within the Town, but providing appropriate access will be a challenge. Currently the truck traffic to the grain facility must traverse streets in the Town Center. Alternative access routes that eliminate the need for truck traffic in the Town Center will likely require State approval of a rail crossing.

Millington’s objectives for the Employment Planning Area are:

- Expand local employment opportunities so that Town residents may live and work in Millington;
- Increase the Town’s business and industrial assessable base; and
- Work with Kent County to achieve economic development objectives by providing additional light industrial land.

Development regulations for the Employment Planning Area should permit a broad range of light industrial and business uses. Incentives should encourage development as a planned business park. The Town, along with the County should support development of alternative access routes to the area east of the rail line.

Public/Semi-Public

The “Public/Semi-Public Planning Area” totals approximately 18 acres. Other public land that is not included in this acreage is State and Town street rights-of-way, the rail road right-of-way and the portions of the Chester River located in Millington. Town-owned properties include the Town Hall and the Waste Water Treatment Plant. Public land also includes a small portion of the Millington Elementary School site, which is partially located within the Town. The Town’s objective for Public land is to ensure it is used in a manner that best serves the needs of residents.

Semi-public land totals nearly 10 acres within this land use category. Semi-Public lands include two cemeteries, properties owned by the Millington Volunteer Fire Department, and church properties. Semi-public uses, such as these, contribute to social cohesion in the community. The Town’s objective for this Planning Area is to accommodate these and similar uses at appropriate locations within the Town.

Parks and Open Space

The “Parks and Open Space Planning Area” is approximately 11 acres. It includes Robvanary Park and the recently dedicated Millington waterfront park located on the Queen Anne’s County side of the Chester River. This Planning Area also includes about 4 acres of open space in the Mill Village subdivision. The Town’s objective for this planning area is to maintain public park land for the enjoyment of Town residents.

Conservation

The “Conservation Planning Area” is approximately 140 acres of land that includes streams, wetlands, hydric soils, floodplain, buffers and sensitive species habitats. This Planning Area forms a green corridor running through the Town that incorporates primary drainage ways and their buffers.

When considering the development potential of a site, Conservation Planning Areas should not be treated in the same way as other areas. Areas with little or no sensitive environmental features or habitat value, and that are not part of significant drainage corridors, have a greater capacity to support development with less impacts to the local environment. The development process should reflect the notion of “carrying capacity”, which is the level of development a site can support given natural resource limits. Total Maximum Daily Loads (TMDLs), discussed in the Water Resources Element, are an example of measuring “carrying capacity” for the Upper Chester River. Conservation Planning Areas are indicators of the carrying capacity of the upland portions of the Town.

Millington’s objectives for the Conservation Planning Area are to:

- Protect and restore sensitive and natural resource areas such as contiguous and interior forests, environmentally sensitive areas, and intact stream buffers;
- Maintain existing forest cover (no net loss policy for forest); and
- Where necessary, enhance stream and wetland buffers for their value as water quality protection measures.

Development regulations should reflect a given site’s inherent limitations. For this reason Conservation Planning Areas should be eliminated or significantly discounted for purposes of calculating allowable development (e.g., density or floor area).

Chapter 4 Community Facilities

Public services and facilities provided by Millington and other government agencies ensure the health, safety and welfare of existing and future populations. To insure that adequate community facilities and services are available when needed, the Town must continually monitor demand and capacity in order to anticipate when and where facility expansion will be needed. Preparation of a Community Facilities element in the Comprehensive Plan is a preliminary step in addressing supply and demand for community facilities and services including education and recreation facilities, police and emergency services, roads, streets and sidewalks, and water and sewer services. This element of the Comprehensive Plan examines existing community facilities and services. The Municipal Growth element of this Plan recommends actions the Town should take to adequately address community facilities and services to meet the needs of future populations.

TOWN GOVERNMENT

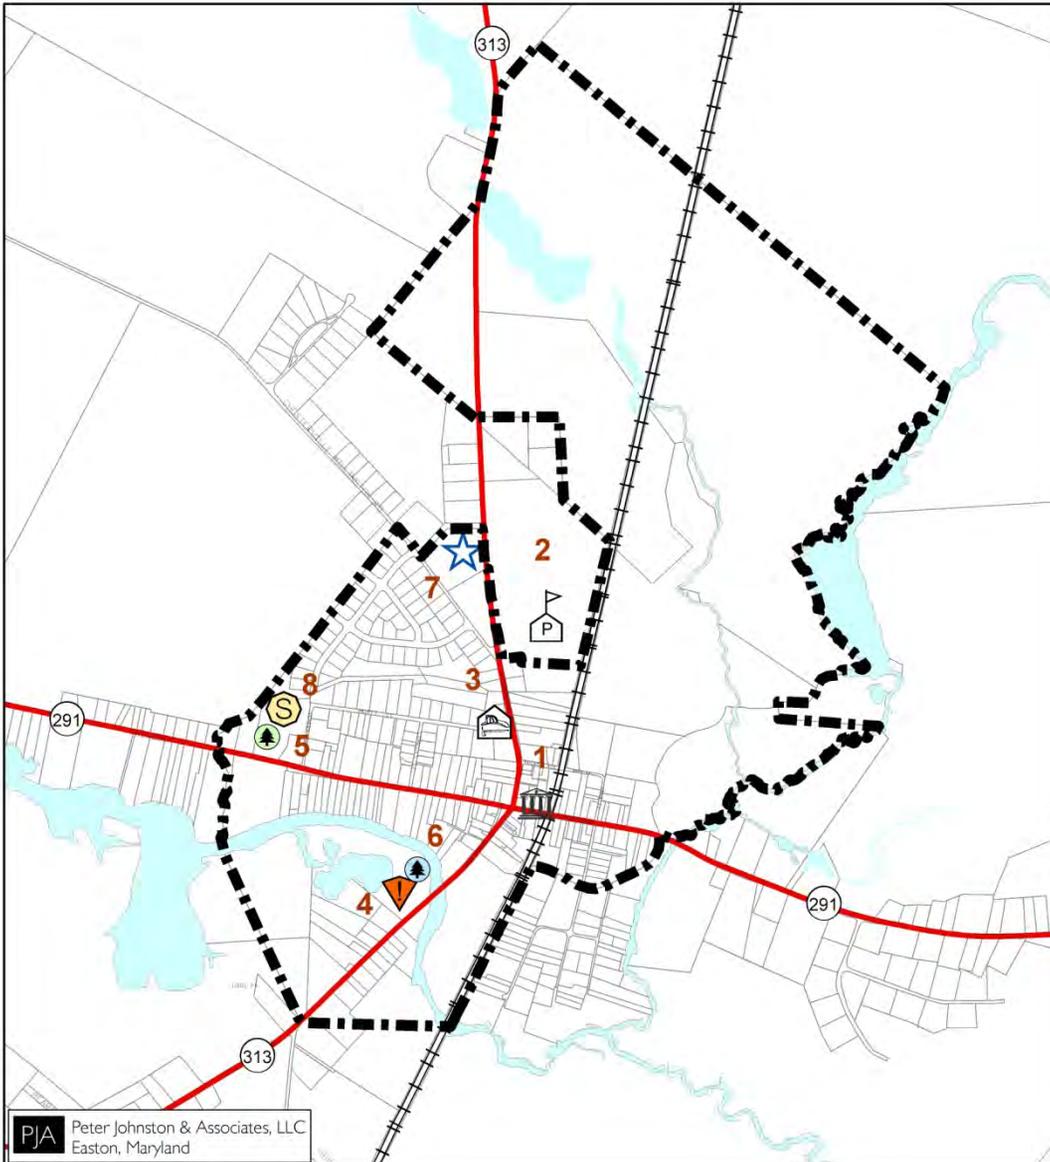

The Town of Millington functions under a Mayor and Council form of government. Residents elect three council members, who each serve three-year staggered terms. Council members are elected at an annual election held on the second Saturday in March. The Council, in turn, elects a Mayor from among its members. Council meetings are held on the first and third Wednesdays of each month in the Town Hall (located on Cypress Street in the old historic bank building) and are open to the public as required by the “Maryland Open Meetings Act.”

The Town operates with two funds (a Utility Fund and General Fund) on a July-June fiscal year. Annual budgets containing estimates of anticipated revenues and proposed expenditures are prepared for both funds and serve as financial plans for the Town.

The Town is responsible for the provision of water and sewer services, street lighting, traffic signs, sidewalks, curbing and guttering, trash and garbage collection, and street and municipal park/playground maintenance.

Final Version 05/27/09

PUBLIC SCHOOLS

Students in Millington attend Kent County or Queen Anne's County public schools; because most of the Town's population lives in the Kent County portion of the Town, most of Millington's students attend Kent County public schools. Millington Elementary School, located on Sassafras Street just outside the Town limits, is part of the Kent County Public Schools system.

Most of Millington's elementary school students attend Millington Elementary School. As of September 30, 2007, there were 214 children enrolled in the school. Millington Elementary School serves kindergarten through 4th grade students. The Town's middle school students attend Galena Middle School (grades 5 through 8), which had an enrollment of 259 students in September 2007, and Millington's high school students (grades 9 – 12) attend Kent County High School in Worton, which had an enrollment of 750 students in September 2007.¹

Children who live in the Queen Anne's County portion of the Town attend Sudlersville Elementary School, which serves kindergarten through 5th grade students, Sudlersville Middle School (grades 6 – 8) and Queen Anne's County High School (grades 9-12) in Centreville.

The *Kent County 2006 Comprehensive Plan* notes that public school enrollment in the County has declined in the last decade, following a "mini baby boom" that lasted from 1987 to 1997². The County anticipates that the combined slow population growth and low birth rate projected for Kent County by Maryland Department of Planning will result in a gradual decline in the County's total public school enrollment through 2014. All Kent County public schools currently are operating below or well below capacity levels; consequently there are no plans for expansion of Millington Elementary School in the near future.

FIRE, RESCUE, & EMERGENCY MEDICAL SERVICES

Fire protection services for Millington and the surrounding area are provided by the Millington Community Volunteer Fire Company (Station 2 in Kent County). The Company was established as a volunteer organization in 1923 and today is operated by a combination of about sixty active volunteers and associates. The station's first-due response area extends approximately 7 miles north to Golts, approximately 2 miles south to Hacketts Comer, approximately 4 miles east to the Delaware line and approximately 5 miles west to Cherry Lane Road (Route 298).

The fire station is located on Sassafras Street at Hurtt Avenue and houses fire and rescue equipment including three fire trucks, one tanker, one brush truck, one emergency medical services (EMS) vehicle, one ambulance, and one outboard rescue boat. The building also serves as a community hall for the residents of Millington.

¹ Student enrollment figures from Maryland State Department of Education, September 30, 2007

² Kent County May 2006 Comprehensive Plan

The Town of Millington donates \$1,000.00 annually to the Fire Company. The Fire Company also receives assistance from Kent County in providing emergency medical services to its first-due area. Kent County started its Emergency Medical Services (EMS) system in 1996 to assist volunteer ambulance companies in the County with the increasing number of medical calls and the decreasing number of volunteer responders. EMS paramedics are on duty 24 hours per day, 7 days per week to provide Advanced Life Support (ALS) to residents of Kent County.

POLICE PROTECTION

Police protection is provided by the Maryland State Police and the Kent County Sheriff's Department. The State Police maintain a barracks in Centreville that serves Kent and Queen's counties. Both the Kent County Office of the Sheriff, located in Chestertown, maintains a full-time staff of uniformed patrol officers and detectives. The Town reserves money in its General Fund Budget each year to fund the Sheriff's Office. In FY 2008-2009, the donation was \$15,000. The small number of residents who live in southern Millington are protected by the Queen Anne's County Office of the Sheriff, headquartered in Centreville. The Office also operates a substation in Sudlersville, six miles south of Millington.

PARKS & RECREATION

MILLINGTON WATERFRONT PARK

Millington's Mayor and Council approved the concept of this municipal park in 2005. Located on the Chester River on Town property just south of the Chester River Bridge and east of the Wastewater Treatment Plant, it is an area that has long been popular with fishermen and local residents. Construction of the park began in late 2007 and was completed in Spring 2008. The park was dedicated in July 2008. Facilities include fishing piers, a walking trail, and a canoe launch.

Millington's Waterfront Park, located near the Wastewater Treatment Plant on the Queen Anne's County side of the Town, provide scenic view of the Chester River and access for small boats and kayaks

ROBVANARY PARK

Robvanary Park is located on 3.024 acres on the west edge of Millington along Cypress Street. The Town purchased the property from the Kent County Commissioners in 1975 for use as a community recreational area. In May, 1976 the Town entered into an agreement with the Millington Lions Club to develop the land as a park, including a children's play area and athletic field. In April, 1977 the Department of Natural Resources of Maryland approved a grant to assist in the development of the Park, enabling the purchase and installation of picnic tables, a parking lot, a ball field, backstop and side guard, bleachers, playground equipment, and a picnic pavilion. Since then, Maryland Program Open

Space (POS) grants have been used to fund improvements and upgrades to the Park, including new playground equipment, a trail, and additional pavilion space.

MILLINGTON COMMUNITY POOL

The Millington Pool is maintained and operated by Kent County Parks and Recreation. The facility is located on North Sassafras Street/Millington Road and includes a public pool, bathhouse and picnic area. The pool is open to the public from Memorial Day through Labor Day, Tuesday through Sunday, 12:00 p.m. to 7:00 p.m. Kent County Parks and Recreation offers swimming lessons at the pool to County residents Monday through Thursday. Monday and evening group rentals are available. The pool can be rented for private group parties. Daily admission to the pool is \$2.00 for residents of Kent County or \$3.00 for out-of-County residents. A season pass is available for \$50 for in-County residents and \$60 for out-of-County residents.

MILLINGTON SKATEBOARD PARK

The Town of Millington has the only skateboard park in Kent County. The concept of a skateboard park was brought to the Mayor and Council in May 2000 by a representative from the Asbury Methodist Church, who proposed constructing a small ramp behind the church in an effort to keep skateboarders off of the streets and sidewalks. The concept was supported by the younger citizens of the Town, and in late 2000, the Town agreed to provide a site for a dedicated skateboard park if funding sources could be found to construct one. Using a combination of Maryland Program Open Space (POS) funds, local donations raised and gathered by young Town residents, and matching funds provided by the Town, the Town constructed the Park in 2001 in Robvanary Park. As of 2008, 189 area youths are registered to use the Skateboard Park. All skaters must obtain a permit, a waiver, and a copy of the regulations through the Town Office for a fee of \$15 per skater.

LIBRARY

Millington is located about 13 miles from the Chestertown (Central) Branch of the Kent County Public Library and about 8 miles from the North County Branch in Galena. The Chestertown Branch is located on High Street. It is the largest branch of the Kent County library system and is housed in an 11,000 square-foot facility. The North County branch moved into larger quarters in 2006 and occupies an 1,800 square-foot building on Main Street in Galena. Services at this branch include preschool programs, high speed wireless internet access via Personal Computers and Macintosh Computers, an on-sight collection of over 2000 resource items, including Digital Video Disks (DVD's), audio books, children's books, large print items, and magazines, and online access to other collections in the Kent County Public Library System.

In its 2006 Comprehensive Plan, Kent County noted that expansion of its library facilities are needed, particularly additional and upgraded meeting facilities. Escalating costs associated with contemporary library services such as audio-visual technology and continuous computer upgrades also are a continuing

concern. Recommended strategies in the Plan include expansion of the Central Branch facility and increasing library outreach services to serve other regions in the County.³

HEALTHCARE & MEDICAL SERVICES

Medical and health-related services are available to Millington residents from local physicians, the two County Health Departments, and hospitals located in nearby towns. The Kent County Health Department, located in Chestertown, and the Queen Anne’s County Department of Health, located in Centreville, are local offices of the Maryland Department of Health and Mental Hygiene and provide healthcare information and services to all residents of their respective counties. Both departments offer a number of services and programs, including home healthcare, addictions treatment, mental health services, family and children’s healthcare, adult daycare, disease prevention, and medical transportation.

Nearby hospitals include the Chester River Hospital Center in Chestertown (15 miles), Union Hospital in Elkton (30 miles), and several facilities in Wilmington, Delaware (40 miles) and Dover, Delaware (21 miles).

PUBLIC DRAINAGE ASSOCIATION

The Millington Public Drainage Association (PDA) was established in 1973 to maintain the Public Tax Drainage Ditch, which is approximately 3,433 feet in length. The ditch is located in the north part of the Town and runs from the railroad track, under Sassafras Street, to the stream located behind Robvanary Park where it discharges. It provides drainage for the properties of approximately 25 percent of the total population within Town limits.

The PDA is regulated by Article 25 of the Maryland Drainage Law. It meets annually to elect managers, review tax income and maintenance liability, review plan activity from the previous year, determine plan activity for the upcoming year, and prepare for approval of an “Operation and Maintenance Plan” for the upcoming year. The ditch is inspected annually and after severe storm events. The PDA works in conjunction with Kent Soil Conservation, Maryland Department of Agriculture, Department of Natural Resources, and Critical Areas Commission.

Property owners along the ditch are responsible for keeping the ditch and drainage to the ditch from being obstructed. If obstruction occurs property owners are charged with a misdemeanor and fined.

³ 2006 Kent County Comprehensive Plan, Community Services & Public Facilities Element

WATER AND SEWER

The Town of Millington owns a municipal water and wastewater system and is responsible for preparing and implementing a capital improvement program to maintain and/or upgrade the system. The system is operated and maintained by Maryland Environmental Services (MES), an independent State agency contracted by the Town in 2008.

WATER FACILITIES & SERVICES

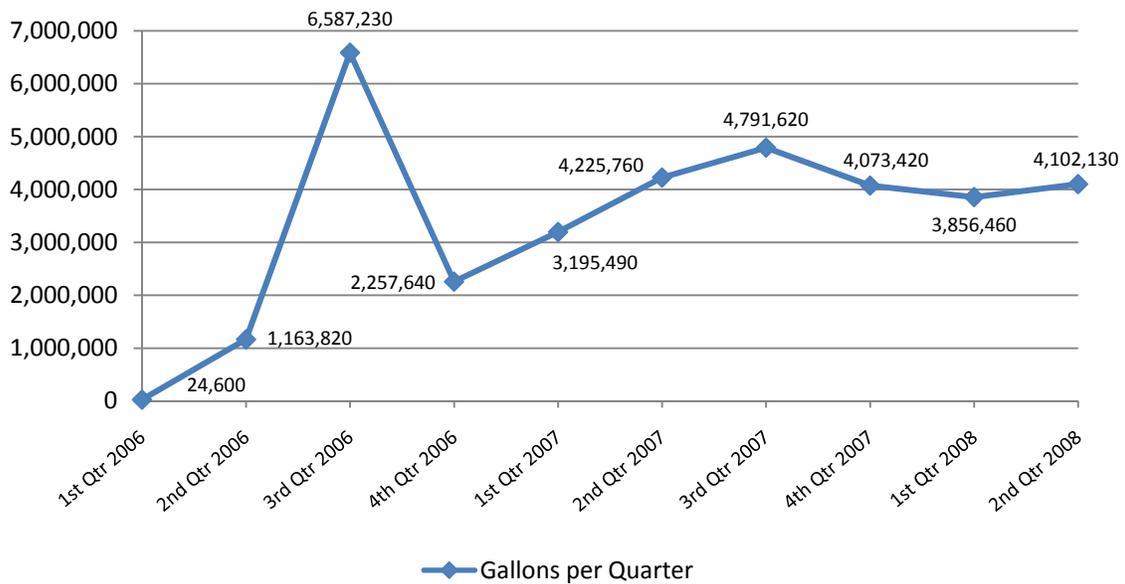

The Millington Water System serves properties in the Town and in two areas outside of the Town limits in Kent County, which include: 1) Sandfield, a community located adjacent to Millington's southeastern boundary; and 2) a small number of homes located along MD Route 291 west of the Town limits. In 2008, there are 404 connections to the system. The *2007 Kent County Department of Water and Wastewater Annual Drinking Water Quality Report* indicated that Millington's water system meets all Federal and State requirements for safe drinking water.

In 2004, the Maryland Board of Public Works approved a water system grant of \$625,000 to the Town for construction of a new water distribution system, storage tanks, production wells and treatment facility. Construction of the system, including a new 250,000 gallon water tower, was completed in 2005 for a total cost of approximately \$2.3 million.

A "Water Appropriation and Use Permit" for the new facility was issued by the Maryland Department of the Environment (MDE) in November of 2005. It expires in November of 2017. The permitted capacities of the system are 137,000 gallons per day (gpd) average daily flow and 205,500 gpd maximum daily flow. Groundwater is drawn from three wells. Since its construction, a number of system leaks have been recorded and while some have been identified and repaired, leakages continue to be an issue.

The Town's quarterly total water usage from 2006 to June 2008 is illustrated below. A significant spike in usage in September 2006 was attributed to 6 leaks in the system; smaller spikes occurred in June 2007 (Mill Village construction/watering sod), September 2007 (Food Lion leak of 525,000 gallons) and December 2007 (Mill Village construction/ watering sod). In 2008, the system's average daily flow is 43,100 gpd.

FIGURE 4-1: Millington Water System Quarterly GPD Usage

WATER SYSTEM ALLOCATIONS

The Town’s policy for allocating sewer and water connections was passed by “Millington Resolution 2006-2” in May 2006 (see Chapter 7: Water Resources Element). As of 2008, there were approximately 404 connections to the system all located in Kent County. This includes 248 in-town connections and 156 County connections, which include Millington Elementary School, a small subdivision (Sandfield) outside of the Town’s southeastern limits, and a sparsely populated area west of Town along Route 291 that includes a few homes. The system also supports 49 fire hydrants for fire suppression, supplemented with several existing dry hydrant.

The system’s current average daily flow of 43,100 gpd is well below its maximum permitted flow of 137,000. The system’s capacity to serve future water demand and the capacity of the Town’s groundwater supply are discussed at length in the Water Resources Element of this Plan (see Chapter 7). As recommended in the Water Resources Element, pending the outcome of the extensive study of the Atlantic Coast Plain aquifer system currently being conducted by federal and State researchers, both the existing water facility and the current system of allocating Town water connections may need to be reviewed and improved as indicated by potential new findings.

SEWER FACILITIES & SERVICES

The Millington Wastewater Treatment Plant (WWTP) is located on the Queen Anne's County side of Millington on Sassafas Street, on the Chester River. As of 2008, there were approximately 404 sewage connections, 248 of which are in the Town and 156 of which in Kent County, including Millington Elementary School, Sandfield, and the area along 291 to the west of Town.

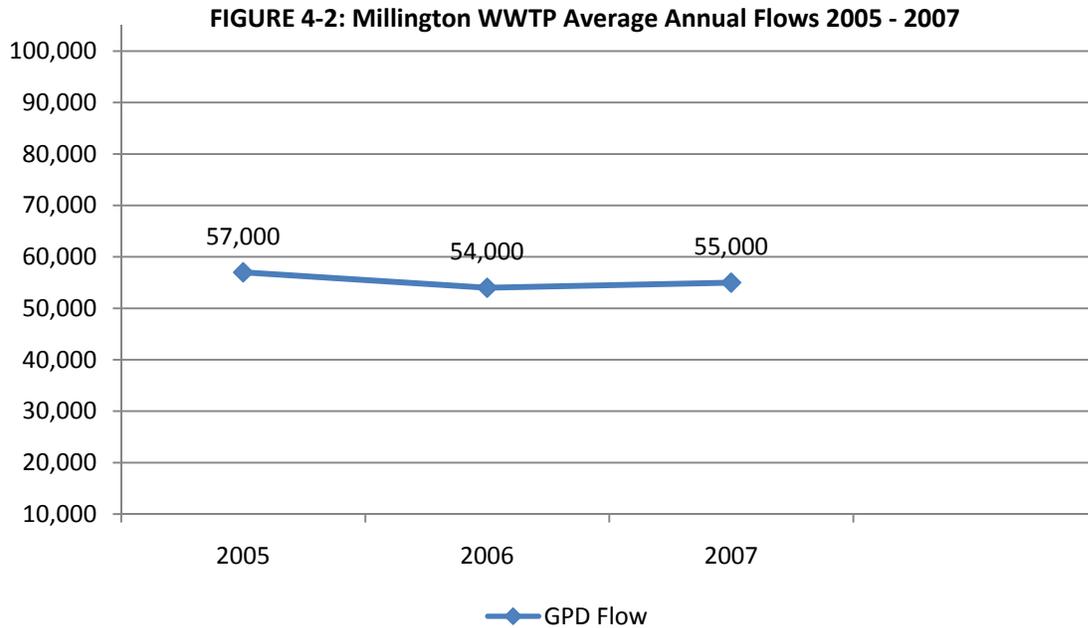

The collection system consists of 4-, 6-, 8-, and 10-inch lines and three pumping stations. The facility, designed and built in 1966, is a package sewerage treatment plant that utilizes a contact stabilization process. The plant consists of a reinforced concrete tank with a diameter of 29 feet and contains prefabricated units to complete the contact stabilization process. The plant has been upgraded in the past to include flow equalization, chlorination, and dechlorination.

In 2004, the Maryland Board of Public Works approved a grant to Millington to expand and improve the WWTP. The facility was inundated during Hurricane Floyd and was offline for five days, while it was being repaired. The Board of Works funding enabled the planning, design and construction of a new WWTP. As part of the project, the plant’s collection system was improved, and advanced treatment components were added, including biological nutrient removal, sand filters, and UV disinfection. Sludge drying beds and an influent pumping station also were added as part of the project.

The improvements expanded the plant’s permitted flow to 105,000 gpd (.105 mgd); the design capacity of the plant is 145,000 gpd (.145 million gallons per day - mgd). The total cost of project was approximately \$2.6 million. The annual flows for the WWTP for the period 2005 - 2007, as reported by Kent County in the Sewage Flow Capacity Report for the Millington WWTP, are shown in Figure 1. Using these figures the average annual flow for the WWTP for that period is 55,000 gpd (0.055 mgd).

Sewer System	MGD	GPD
Rated Design Flow	0.145	145,000
Current Permitted Flow	0.105	105,000
Less Estimated I & I	0.006	6,000
Gross Capacity	0.099	99,000
3 yr Average Daily Flow	0.055	55,000
Outstanding Allocations	0.02625	26,250
Available Capacity (1/1/08)	0.01775	17,750

Source: Kent County Sewage Flow Capacity Report, Millington Wastewater Treatment Plant, January 2008

As illustrated in Figure 4-2, the plant has experienced stable average annual flows since it came online in 2005. The WWTP’s capacity to serve future demand for sewer is discussed in detail in the Water Resources Element of this Plan. Millington has a pending request with the Maryland Department of Environment to increase the Town’s permitted daily flow from 0.105 mgd to 0.140 mgd. In addition, according to Town officials, a design consideration in the existing WWTP makes it feasible to double the capacity of the plant at the existing location. If the Town’s request for a permitted flow increase is granted, the capacity of the existing WWTP will be adequate to serve demand through the planning period.

Chapter 5 Municipal Growth

The purpose of the Millington Comprehensive Plan's "Municipal Growth Element" is to examine the interrelationships among land use, population and housing growth, and their impacts on public facilities and services. In this regard, Millington officials will have a stronger basis for setting land use and growth management policies in the future through a better understanding of the multi-dimensional implications of change.

BACKGROUND

Millington is located on Maryland's Eastern Shore in the southeastern portion of Kent County and a small portion of northwestern Queen Anne's County. Kent and Queen Anne's Counties in Maryland both border Kent County in Delaware. Millington is a small town in an ideal rural setting with picturesque farms and plentiful natural and heritage resources. Millington is located on the Upper Chester River, a major tributary in Kent County and the region. The Chester River is part of the Chesapeake Bay estuary.

Major arterials for the region include U.S. Route 301 and Maryland Routes 313 and 291. Millington is primarily served by U.S. Route 301. State roads, which link to this primary arterial, include Maryland Routes 313 and 291. Urban areas near Millington include Dover and Wilmington Delaware; Annapolis, Maryland; Baltimore City, Maryland; and the District of Columbia (Washington DC). Other nearby metropolitan areas include Philadelphia, Pennsylvania and New York, New York. The nearest metropolitan areas are Dover and Wilmington Delaware. These urban areas represent potential places of employment for Town residents. Approximate travel times and distances to these metropolitan centers are as follows:

- Dover, Delaware is 38 minutes and 23 miles;
- Annapolis, Maryland is 1 hour and 52 miles;
- Baltimore City, Maryland is 1 hour and 30 minutes and 78 miles;
- Washington DC is 1 hour and 39 minutes and 81 miles;
- Wilmington, Delaware is 53 minutes and 44 miles;
- Philadelphia, Pennsylvania is 1 hour and 29 minutes and 73 miles; and
- New York, New York is 2 hours and 56 minutes and 158 miles.

Source: MapQuest

KENT COUNTY LAND USE PLANNING

Most of the Town of Millington is located in Kent County, Maryland. Predominant land uses in the region include agriculture, some forestry, and low density residential development. Small commercial and rural residential development in the County are located west, north-west, and east of Town near the Millington corporate boundary.

As seen in Figure 5-1, the 2006 *Kent County Comprehensive Plan* designated an agricultural preservation “Priority Area” north of Millington along MD Route 313 (Millington/Massey Road). Several agricultural preservation easements under the Maryland Agricultural Land Preservation Foundation (MALPF) are currently located in this corridor.

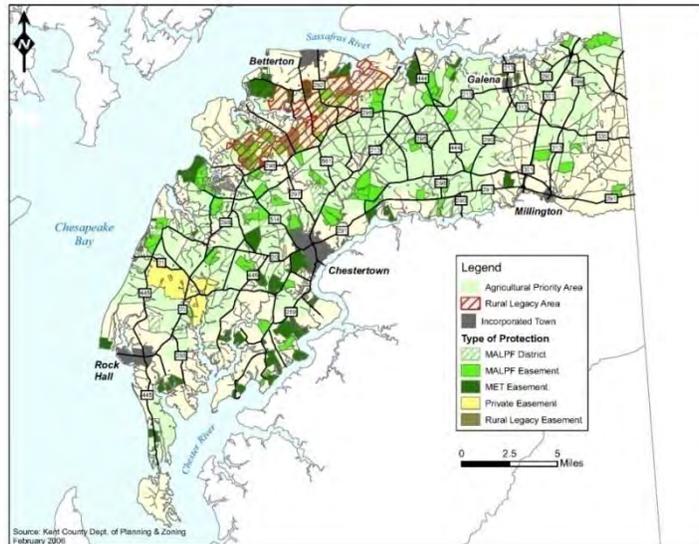

FIGURE 5-1: The 2006 *Kent County Comprehensive Plan* shows an agricultural preservation corridor north of the Town of Millington along Maryland Rt. 313.

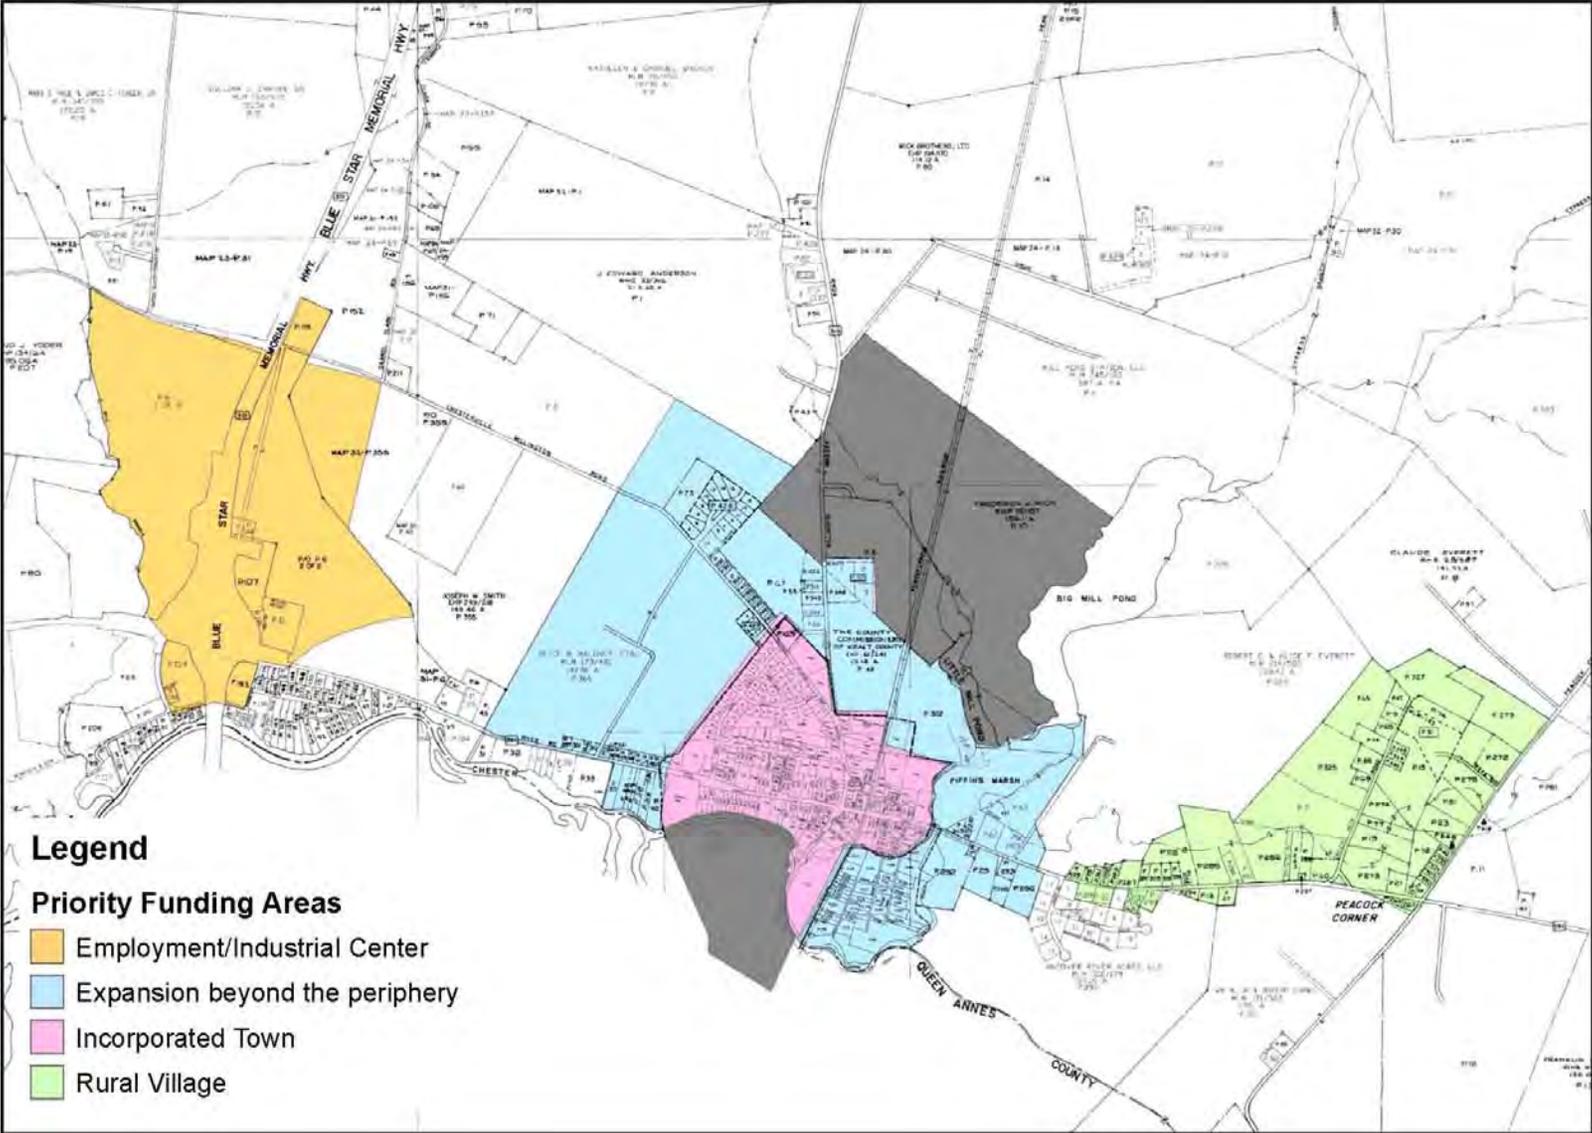

PRIORITY FUNDING AREAS

Millington is a designated growth area in Kent and Queen Anne’s Counties. However, growth expected in the Town is primarily located in Kent County. The region surrounding the Town consists of large agricultural parcels and substantial land exists for municipal growth. According to the Kent County Comprehensive Plan:

“The five incorporated towns of Betterton, Chestertown, Galena, Millington, and Rock Hall are the County’s principal residential, commercial, and business centers. These towns are the best locations for future growth and development. The primary goal is to encourage development to occur within the designated growth areas (Village Centers and Town Growth Areas) while preserving the existing character of the communities and their historic and cultural features. Each town has its own independent planning and zoning boards, plans, and ordinances. Given the goal of focusing growth into the towns, the County needs to coordinate and support their efforts to manage growth.”

As indicated on the map below, provided by the Kent County Department of Planning, Housing, and Zoning, Millington is a “Priority Funding Area” (PFA). The requirement for designating PFAs was established under the 1997 *Neighborhood Conservation and Smart Growth Areas Act* (Smart Growth) and supports the State “Visions” for growth as expressed in the 1992 Planning and Zoning Enabling Act (*Article 66B of the Annotated Code of Maryland*). PFAs are locally-designated areas targeted eligible for State funding. PFA designations include municipalities, rural villages, communities, industrial areas, and planned growth areas to be served by public water and sewerage. The 1997 corporate boundaries of Millington define the current Millington municipal PFA.

Millington

The intent of the State’s “Smart Growth” legislation, as well as other recent changes to Maryland laws affecting PFAs, is to marshal the State’s financial resources to support growth in existing communities and limit development in agricultural and other resource conservation areas. The designation of new PFAs in the State of Maryland must meet minimum density, water and sewer service and other criteria outlined in the law. In addition to the Millington municipal PFA there are large County designated PFAs located near or adjacent to the Town in Kent and Queen Anne’s Counties.

It is important to note that as of October 2006, new municipal annexations seeking PFA designation must be submitted to the Maryland Department of Planning (MDP) for “PFA Certification.” According to MDP, County properties annexed into the Town that currently have PFA status, do not retain such status and do not automatically become PFAs if annexed. The 2008 *Millington Comprehensive Plan* highlights the need for improved inter-jurisdictional coordination primarily with Kent County regarding growth. Recently annexed properties in Millington include the Wicks Property, which is not currently within a certified municipal PFA. The Town should seek official PFA Certification from MDP for this property.

FACTORS INFLUENCING GROWTH

The nature and scope of growth in Kent County and its towns has remained relatively consistent from the 20th Century into the 21st Century. Kent County is a predominately rural area. However, larger growth trends in surrounding counties, the State of Maryland, and the State of Delaware portend potentially significant demographic changes for the region in the decades to come. From a broad perspective, growth may be caused by a myriad of factors affecting other Eastern Shore areas including:

- National demographic trends, particularly the retirement of the “Baby Boomer” generation;
- Location in relation to major urban areas in Delaware, Maryland, New Jersey, New York, Pennsylvania, and Virginia (Mid-Atlantic States);
- Market trends for homes, low interest rates, and high value housing in other areas of the Mid-Atlantic region;
- Recent economic fluctuations caused by the 2008 economic crisis in the United States including a significant downturn in the housing market nationwide, which may impact new development; and
- Advances in technology that are allowing employees to telecommute and work from home, which is coupled with rising gasoline and energy costs making telecommuting more desirable and affordable.

In addition, a number of local factors also may contribute to growth including:

- “Quality of Life” for the Eastern Shore region of Maryland;
- Lower-cost housing and land on the Eastern Shore;
- Abundance of historical, cultural, natural, and scenic resources and public amenities, particularly the Chesapeake Bay and its tributaries.
- Local planning policies and zoning regulations;
- Water and sewer capacity in municipalities such as Millington;
- Economic shifts as the region moves toward a service-based economy; and
- Regional infrastructure that promotes access to larger surrounding urban areas such as the U.S. Rt. 301, which connects U.S. Routes 50 and U.S. Route 13.

It is noteworthy to consider growth in the neighboring State of Delaware, particularly Kent, New Castle, and Sussex Counties. In regards to Millington, Kent County, Delaware is the closest and most convenient with an approximate 30 minute drive time. In 2000, the population of Kent County was 126,697. As indicated by the Delaware Population Consortium in the *Kent County, Delaware Comprehensive Plan*, the County’s population is projected to grow at a rate of over 1.5% per year through 2020, increasing to 164,706 people.

New Castle County is the largest county in the State of Delaware with a 2006 population of 525,587 people. In addition, the Wilmington Metropolitan Service Area is within commuting distance to Kent County and Millington (approximately 53 minutes). According to the *2003 Sussex County, Delaware Comprehensive Plan*, the County’s population was 156,638 persons in 2000. County population is projected to increase to 218,547 persons by 2020.

It is reasonable to assume that increased growth in Delaware will affect Kent County, Queen Anne’s County, and the Town of Millington, whether it is increased development activity within the Town or the Counties.

GROWTH TRENDS & PATTERNS

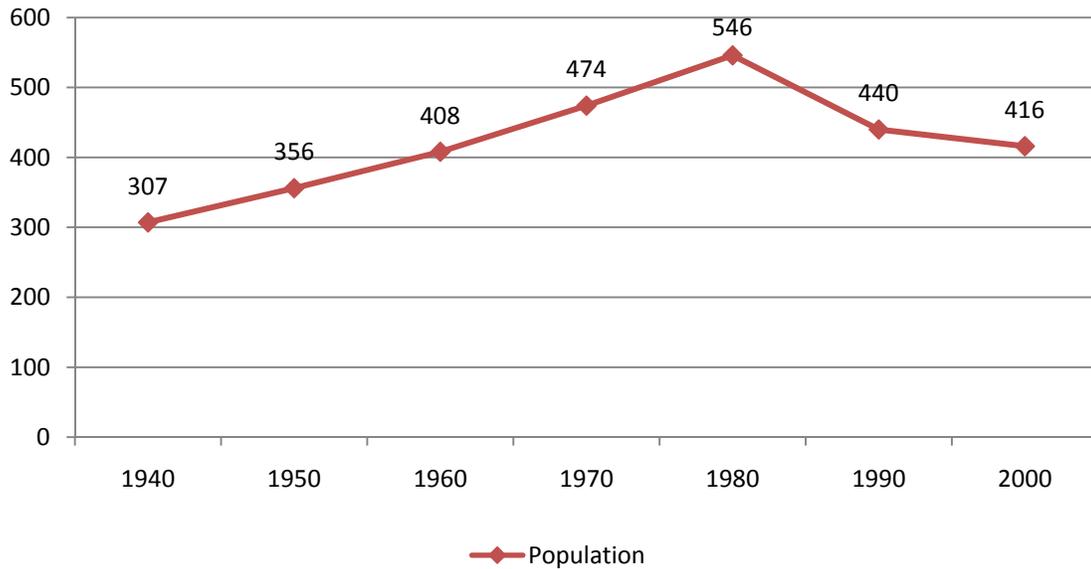

As indicated in Table 5-1, historically from 1940 to 2000, Millington’s population increased by 109 residents. Millington population has ranged from 3% to 2% of Kent County’s overall population during this historic period from 1940 to 2000. Population growth indicates a 36% increase over a sixty year period from 1940 to 2000. This is approximately a 0.6% increase per year.

Table 5-1: Historic Population Growth 1940 – 2000: Millington & Kent County, Maryland							
Jurisdiction	1940	1950	1960	1970	1980	1990	2000
Kent County	13,465	13,677	15,481	16,146	16,695	17,842	19,197
Millington	307	356	408	474	546	440	416
% of County Population	3%	3%	3%	3%	3%	2%	2%

Source: Maryland Department of Planning, 2007: 1990-2000 U.S. Census – Historic Census Data.

As shown in Figure 5-2 below, the period from 1940 to 1980 witnessed the largest increase in Millington’s population (78%), which peaked in 1980 and began a gradual decline over the next 20 years. Population loss between 1980 and 2000 is approximately 130 people. It is important to note that the population in Millington has steadily declined from 1980 to 2000, prior to the last official Census in 2000.

FIGURE 5-2: Millington Population Trends 1940 - 2000

As shown in Table 5-2, official census estimates show a 6% decrease in the Town’s population from 2000 to 2006. During the same period Kent County’s population grew by a modest 4%.

Table 5-2: Population Growth 2000 – 2006: Millington & Kent County, Maryland

Jurisdiction	2000	2001	2002	2003	2004	2005	2006	% Change
Kent County	19,275	19,426	19,585	19,678	19,747	19,908	19,983	4%
Millington	416	412	414	407	400	396	389	-6%

Source: U.S. Census

Between 1990 and 2006, Millington’s growth was the lowest among Kent County’s municipalities (see Table 5-3). As of 2006, the Census Bureau estimated a population for Millington at 389 people, making it one of the smallest municipalities in the County, second only to Betterton.

Table 5-3: Population By Municipality 1990 – 2006: Kent County, Maryland

Jurisdiction	1990	2000	2005	2006	% Change 1990-2006

FUTURE POPULATION GROWTH

Table 5-4 shows population growth in some of the fastest growing Maryland municipalities in the period 2000 to 2007. Average annual growth rates range from 1.42% in Gaithersburg to 9.81% in Keedysville, both located on the western shore. Highlighted areas in the table indicate Eastern Shore towns and their respective growth rates during this seven year period. These growth rates range from 1.58% in Vienna to 9.77% in Centreville.

Jurisdiction	2000	2007	Change	% Change	Avg. Annual
Vienna	280	311	31	11.1%	1.58%
Ridgely	1,362	1,514	151	11.1%	1.58%
Berlin	3,580	3,971	406	11.4%	1.63%
Frederick	53,108	59,220	6,404	12.1%	1.73%
Havre de Grace	11,400	12,858	1,454	12.7%	1.82%

Centreville	1,985	3,322	1,349	68.4%	9.77%
Keedysville	507	840	342	68.7%	9.81%
Average					3.21%

Prepared by the Maryland Department of Planning, Planning Data Services 102.68%
 Source: U.S. Census Bureau, Population Division. Release date: July 10, 2008

Millington officials have disputed the “official” Census population counts in the Town taken in 2000 and continue to believe that the Census Bureau under counted population during the 2000 Census. Considering recent development approvals and the potential for significant development of a 262-acre parcel recently annexed, historic population growth for Millington (as shown in Table 5-3 above) may not be a good indicator of potential population growth. For example, during the period when the Census Bureau estimated a 6% decline in Town population, approximately 34 new dwelling were constructed and occupied

in the Mill Village development. This subdivision includes a total of 53 building lots. New dwellings are currently under construction on three more lots. The developer of this project has constructed and sold an average 7 dwelling units per year since its inception in 2002. It seems reasonable to assume that the developer will continue to construct dwellings on the remaining 16 lots at this pace. It also seems reasonable to assume that the 34 occupied residential units in the Mill Village subdivision have increased the resident population by approximately 87 (assuming an average household size of 2.55 persons).

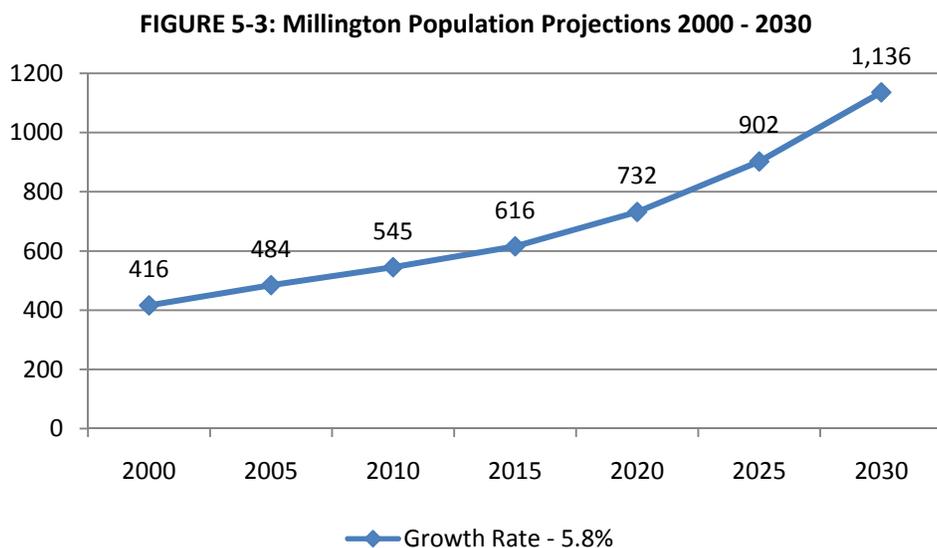

The Town has recently annexed the 262-acre Wicks Property. The owner’s stated intent is to develop the property. Current Town zoning for the site would allow some commercial and industrial uses, but the primary zoning is for residential use. Residential zoning (R-1) for the balance of the property requires a minimum lot size of 12,500 square feet. The R-2 zoning for a portion of the site permits townhouse and multi-family uses and requires 3,200 square feet of land for each residential unit.

POPULATION PROJECTIONS 2000 - 2030

All of the factors discussed above influence Millington’s future population projections through 2030 are shown in Table 5-5 below. Population growth for the Town from 2000 to 2030 is projected to increase by approximately 720 people. The projected annual average growth rate between 2000 and 2030 will be approximately 5.8%. The most substantial increases for Millington are expected from 2000 to 2015 as Mill Village is completed and the Wicks property begins to develop.

Table 5-5: Population Projections - Millington 2010 - 2030									
Classification	2000	2005	2010	2015	2020	2025	2030	Change	Average Annual Growth Rate
Population	416	485	545	616	732	902	1,136	720	5.77%
Dwelling Units	163	190	216	246	296	371	471	308	6.30%

Source: Peter Johnston & Associates, LLC

ASSUMPTIONS FOR POPULATION PROJECTIONS

Population projections for Millington are based on the following assumptions:

- Millington is expected to grow at a rate consistent with other fast-developing Eastern Shore municipalities from 2000 to 2030 as indicated in Table 5-4.
- Population projections account for new infill development in Millington, which includes Mill Village (presently being developed) and a portion the Wicks Annexation (potential new infill development).
- Population projections assume that construction of dwelling units on the Wicks Property will begin after 2010 and continue throughout the planning period.
- Population projections assume Millington's average household size will follow the Maryland Department of Planning's (MDP) projected trend for average household size for Kent County (a decrease from 2.55 persons per household in 2005 to 2.41 persons per household by 2030 for Millington).

INFILL AND REDEVELOPMENT

INFILL & REDEVELOPMENT CAPACITY

Residential infill potential examines a theoretical capacity associated with vacant and underutilized land in the Town (see Map 5-1). Infill capacity is based on the number of vacant lots currently available for development within the municipal Priority Funding Areas (PFAs) for Millington in Kent and Queen Anne's Counties. Potential yield in Millington was determined by identifying vacant and underutilized parcels using Maryland Property View (MPV) data, verified by recent aerial photograph for Kent County. These sites constitute lots of record and are expected to develop within the planning period from 2000 to 2030. Sites include several lots within Mill Village, a planned development, yet to be developed.

In addition, infill capacity includes the Wicks property. Currently, the Wicks Property is located outside Millington's municipal PFA. Subdivision and subsequent development of the Wicks Property assumes that existing Town residential zoning for R-1 (12,500 square feet lots) and R-2 (3,200 square feet lots) will be applied to potential dwelling units as outlined in the annexation agreements.

The estimated total infill and redevelopment potential for Millington by 2030 is an additional 308 residential dwelling units. The result of the development capacity analysis indicates the Town has capacity for an addition 700 dwelling units and can accommodate a population of approximately 1,775.

ASSUMPTIONS FOR INFILL & REDEVELOPMENT

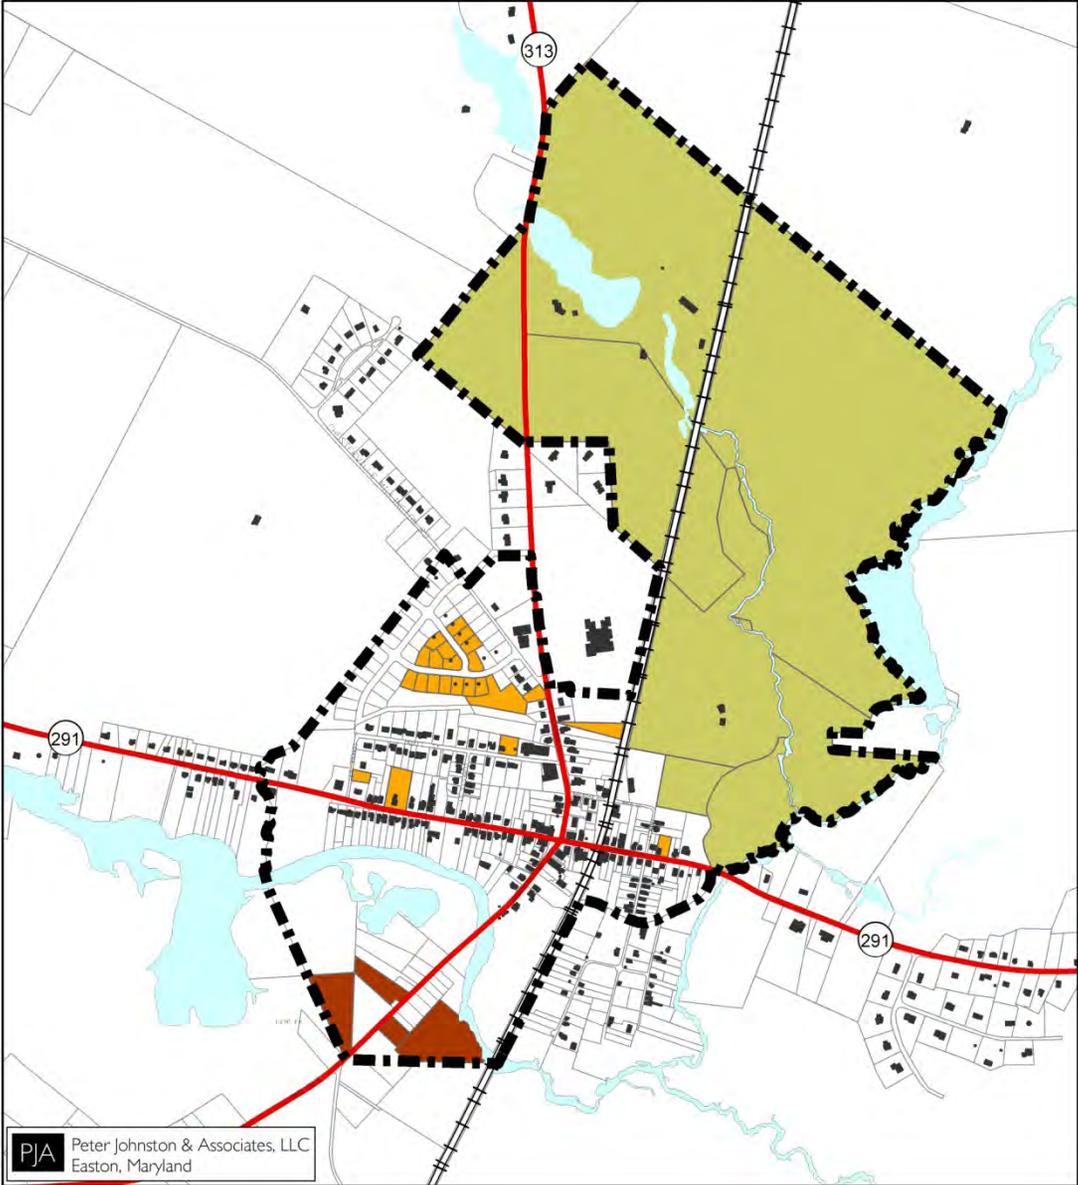

Infill and redevelopment capacity for Millington is based on the following assumptions:

- Infill capacity accounts for new infill development in Millington, which includes Mill Village, presently being developed, the Wicks Annexation (potential new development), and other infill lots within the existing Priority Funding Area.

- Build-out capacity for infill and redevelopment assumes that at least 25% of the Wicks Property site will be used for roads, open space, and other uses unrelated to dwelling units.
- Infill capacity assumes development of the Wick property based on current Town residential zoning (R-1 and R-2).
- Commercial and industrial development utilizes a 0.10 “Floor Area Ratio” (FAR) factor for analysis and assumes water and sewer demand of 200 gallons per day (gpd) for every 1,000 square feet of Gross Floor Area (GFA) respectively.
- Population estimates assume Millington’s average household size will decline over time proportionate with the MDP projected average household size for Kent County, decreasing from 2.55 persons per household in 2005 to 2.41 persons per household by 2030.

GROWTH & ANNEXATION AREA PLAN

The Millington Growth and Annexation Area (Growth Area) has been refined during this comprehensive planning process to reflect new Town goals in relation to annexation, growth, and future development. Therefore the Growth Area, as defined in the 2007 *Millington Comprehensive Plan*, has been resized and significantly altered.

GROWTH AREA ANALYSIS

The total acreage for the Growth Area is 205 acres. As shown on Map 5-2, the Growth Area contains 23 parcels and represents the Town’s long range growth expectations. Much of the Growth Area is comprised of small parcels, many of which are already developed (see Table 5-6).

Table 5-6: Growth Area Analysis – Properties In Growth Area						
Status	Map	Grid	Parcel	Lot	Land Use	Acreage
Vacant	32	2A	366	N/A	Agriculture	142
School	32	2B	49	N/A	Institutional	25.45

Source: Maryland Property View – MPV

Two Growth Area parcels, indicated as green in Table 5-6, have the potential for new development. These parcels total approximately 162 acres and are being used for agricultural purposes. In addition, the Millington Elementary School is located within the Growth Area. The Millington Elementary School is currently served by Town water and sewer but is not within the existing corporate boundary.

ANNEXATION & GROWTH AREA

Millington’s Growth Area has the potential for approximately 445 dwelling units with an estimated population of 1,073. Additional water and sewer demand associated with this level of growth is 111,250 gallons per day (gpd) respectively (see Table 5-7).

Table 5-7: Growth Area Analysis – Properties In Growth Area					
Location	Acres	Assumed Zoning	Capacity DU’s	Est. Population	W&S Demand GPD
Growth Area – New Development	162	R-1	423	1,019	105,750

TOTAL	205		445	1,073	111,250
Projected Water Demand					111,250 GPD
Projected Sewer Demand					111,250 GPD

Source: Peter Johnston & Associates, LLC

Millington’s Annexation plan acknowledges that these properties may be incorporated into the Town at some future date. However, annexation of these properties will not be occur until water and sewer capacity issues associated with infill development within the current corporate limits area adequately addressed. In the meantime, the Town would like the County to hold these properties in agriculture zoning, thus limiting the potential for premature, low-density development on well and septic systems. Millington has several reasons for this position including:

- Protecting Millington’s unique identity by controlling the quality of development occurring in and around the Town;
- Requiring development site design that focuses on “place-making” principles including mandatory open space requirements;
- Enabling densities for new development that support Smart Growth (Planned Neighborhood Development-PND);
- Requiring appropriate water-saving construction materials for new development to protect water quantity;
- Requiring “Best Management Practices” (BMP’s) for stormwater management to protect and enhance water quality in potential receiving waters;
- Ensuring appropriate expansion of water and wastewater treatment systems to accommodate new development; and
- Eliminating the potential for future failing septic systems

ANNEXATION POLICIES

Annexation of properties located within Millington's Growth Area will be subject to annexation agreements. The following annexation policies will apply to all future annexations:

1. Proposed annexation areas will be economically self-sufficient and will not result in larger municipal expenditures than anticipated revenues, which would indirectly burden existing Town residents with the costs of services or facilities to support the area annexed.
2. The costs of providing roads, utilities, parks, other community services will be borne by those people gaining the most value from such facilities through income, profits, or participation.
3. Specific conditions of annexation will be made legally binding in an executed annexation agreement. Such agreements will address, among other things, consistency with the goals, objectives and recommendations contained in the *Millington Comprehensive Plan*, zoning and development expectations, responsibility for appropriate studies, and preliminary agreements concerning responsibilities for the cost of facilities and services provided by the Town. These preliminary agreements may be further revised in a Developers Rights and Responsibility Agreement (DRRA).
4. For annexations involving larger parcels of land, the Town Commissioners and/or Planning Commission may require appropriate impact studies, including a fiscal impact study and an environmental impact assessment that addresses the potential impact of the proposed annexation and planned development on the environment of the site and surrounding area.
5. If necessary, applicants for annexation shall pay the cost of completing all studies related to expanding capacity in existing public facilities and/or services

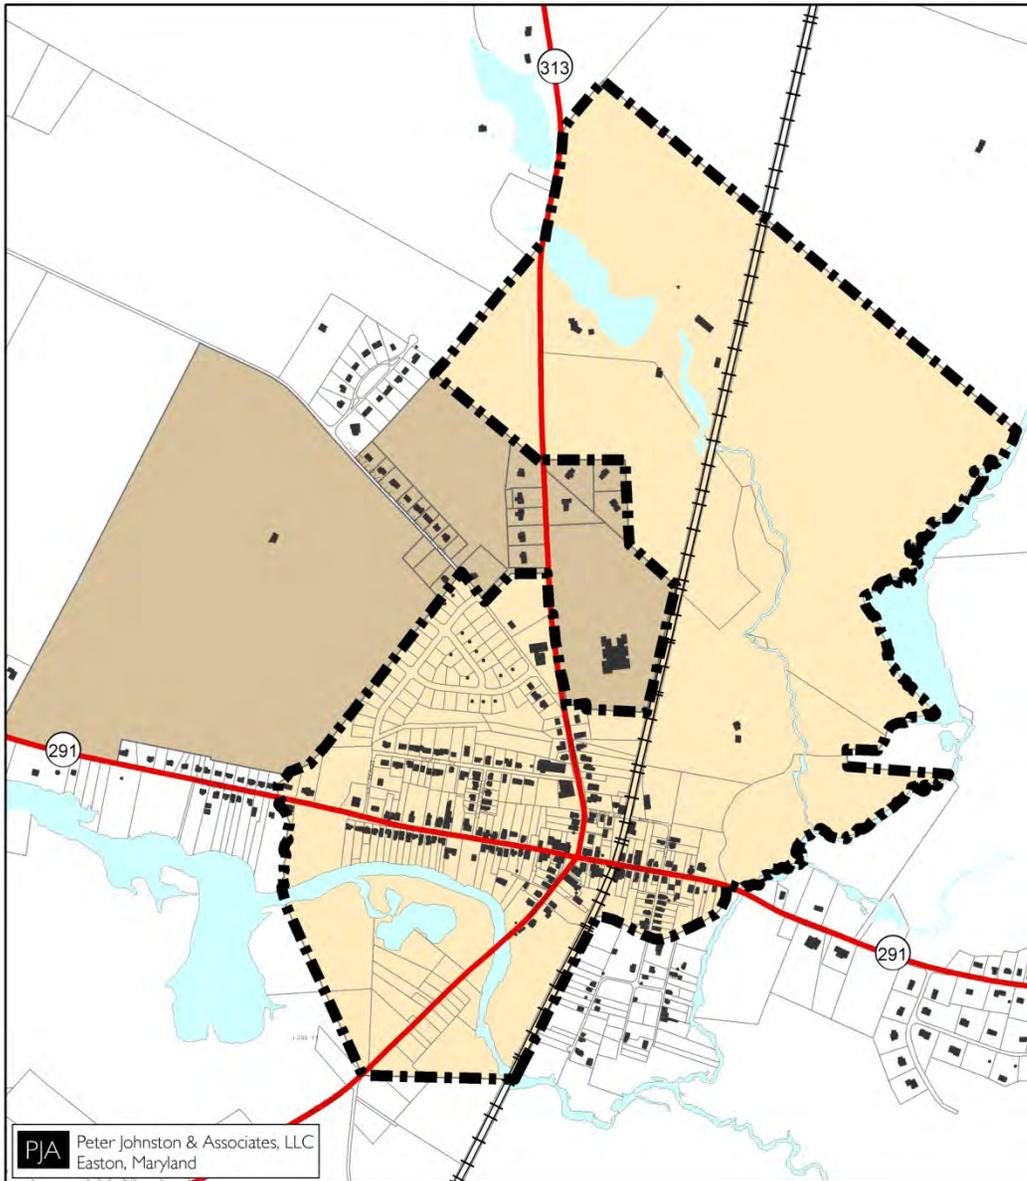

Prior to annexing any land area not included in the Growth and Annexation Plan, the Town will first consider appropriate amendments to this Comprehensive Plan and will follow the procedural requirements for comprehensive plan amendments and annexation established in State law (Articles 66B and 23A), including those of Maryland House Bill 1141. This will ensure that the proposed annexation is consistent with the goals and objectives of this comprehensive plan, that appropriate consideration has been given to the adequacy of public facilities and services, and that County and State agencies are afforded an opportunity to comment on the proceedings.

ASSUMPTIONS FOR THE GROWTH AREA

The Growth Area analysis for Millington is based on the following assumptions:

- Growth Area capacity accounts for potential new development on two existing agricultural properties in the Growth Area, totaling 162 acres.
- Build-out capacity for these two properties utilizes the MDP methodology, which assumes that 25% of the land will be used for roads, open space, and other uses unrelated to dwelling units.

- Growth Area capacity assumes a dwelling unit density based on current Town residential R-1 zoning, which requires a lot size of 12,500 square feet.
- The resulting total developable area in the Millington Growth Area is approximately 121 acres or 423 dwelling units.
- Small, previously-developed lots in the Growth Area do not have development potential but may require water and sewer service.
- Several vacant small lots (5 lots total) have the potential for five additional dwelling units if water and sewer is provided by the Town.
- The Millington Elementary School property is currently served by Town water and sewer but the property is not wholly within the official corporate boundary of Millington.
- Growth Area population projections assume Millington's average household size will decline in proportion with the MDP projected average household size for Kent County over time.

IMPACTS OF GROWTH

Population growth will impact public services and facilities provided by Millington and Kent County. Table 5-8 summarizes the potential impacts of growth from infill and redevelopment in the planning period on public facilities and services (Town and County) based on population projects. Impacts include projected dwelling units from infill and redevelopment, projected population increases, sewer and water demand, as well as other public facilities and services such as schools, libraries, police, recreation land demand, and fire and rescue (emergency services).

Table 5-8: Impacts Of Infill/Redevelopment Growth On Public Facilities & Services Based on Population Projections Through 2030	
Classification	Infill/Redevelopment Areas
Dwelling Units	308
Population	720
New Residential Water/Sewer Demand (GPD)	77,000
New Non-Residential Water/Sewer Demand (GPD)	8,740
TOTAL - New Residential/Non-Residential Water/Sewer Demand (GPD)	85,740

ASSUMPTIONS FOR IMPACTS FROM INFILL & REDEVELOPMENT AREAS

Impacts from Millington's infill growth utilize the following sources and assumptions:

- Future population and dwelling unit projections from 2000 to 2030, as described in this chapter;
- Maryland Department of the Environment (MDE) multipliers for water and wastewater "Water & Wastewater Capacity Management Plans" (250 gallons per day of water and sewer per DU);
- Maryland Department of Planning (MDP) multipliers for school enrollment and recreation land;
- Multipliers for Municipal Administrative Space based on current space per thousand people;
- American Library Association (library facility square footage multiplier);
- International Association of Police Chiefs and other organizations (personnel multiplier);
- International City Council Management Association (fire personnel multiplier); and
- National Planning Standard (fire facility square footage multiplier).

IMPLICATIONS OF GROWTH

The most significant implications of growth (summarized in Table 5-8) are impacts on water and wastewater demand, school facilities, and police, fire, and rescue services and facilities. Large-scale developments with significant potential impacts will be required to conduct a fiscal impact analysis to determine if revenues will cover the cost of public services and facilities.

Public Schools: The impact of Millington's growth on public school facilities during the planning period (by 2030) is illustrated in Table 5-8: a total of 146 new students: 66 elementary school students; 33 middle school students; and 47 high school students. The elementary school population will experience the largest increase in students by 2030, potentially impacting Millington Elementary School. The facility, and the services it provides, may require expansion to serve the increased demand.

Library: Residents of Millington are located within an easy drive of two branches of the Kent County Public Library: the Main Branch in Chestertown (about 13 miles away) and the North County Branch in Galena (about 8 miles away), which occupy a total of 12,800 square feet. Current library facilities will adequately serve the needs of the projected increase in Millington's population. However, the County's most recent Comprehensive Plan anticipates the need for expansion of its public library facilities to serve population increases projected for the County and all of its municipalities. The County will work with the Foundation for the Kent County Public Library to explore alternative funding sources to expand computer, digital, and video technologies into current library services.

Recreation Land: Between 2008 and 2030, an additional 891 people are projected to be added to the Town. Based on the State's ratio of 30 acres per every 1,000 people, approximately 27 acres of additional recreation land will be required in the Town by 2030 to serve additional demand for recreation land as a result of the projected increase in population. At buildout (sometime after 2030) another 33 acres of recreation land will be needed to adequately serve population demand.

Public Safety: Fire and emergency medical services are provided to Millington residents through the Kent County Department of Emergency Management/Medical Services (EMS), which supplies EMS to County towns and oversees the operations of municipal volunteer fire departments (including the Millington Volunteer Fire Department). Police protection in Millington is provided by the Kent County Sheriff's Department and the Maryland State Police.

As illustrated in Table 5-8, police and emergency services will be impacted to a moderate degree as a result of the projected increase in Millington's population by 2030. Based on industry standards for calculating staffing levels of emergency services personnel, two (2) additional police personnel and one (1) additional emergency services personnel will be needed by 2030 to serve the projected increase in population. The increased emergency services personnel will take the form of firemen or EMS technicians stationed at Kent County Station 2 (Millington); additional police personnel may be added through the Kent County Sheriff's Department or the Maryland State Police.

Additional Facility Needs: Millington recognizes that any gain in population will require an equivalent increase in municipal meeting space, Town administrative staff, and municipal services (street repairs, trash collection, etc.). The existing Town Hall may be inadequate to serve future population needs for hearing and meeting space. An expansion of the facility or additional facilities may be required. A review of staffing levels for administration should be conducted by the Town annually (or every five years) to determine adequacy. In addition, Millington should review the need to establish a Public Works department. Expansions of the Town Hall, Town staff, and municipal services can be made and funded as the population and assessable tax base in the Town expands.

Water and Sewer: According to Town and Kent County sources, the Millington wastewater treatment plant (WWTP) has an existing design capacity of 145,000 gpd with a permitted flow of 105,000 gpd. The average flow from 2005 to 2007 was 55,000 gpd. Available capacity was calculated by adding the plant's estimated inflow and infiltration rate (I & I) of 6,000 gpd (as reported by Kent County in the plant's 2007 Sewage Flow Capacity Report) and the rate of outstanding sewer allocations (26,250 gpd), listed in the plant's 2008 Available Capacity Report¹. This total (32,250 gpd) was subtracted from the plant's permitted capacity of 105,000 gpd, resulting in an estimated remaining capacity of 72,750 gpd. Sewerage capacity exists in the Millington WWTP to serve existing development (Mill Village) but not enough to serve anticipated new development (Wicks Annexation) and other infill sites.

Additional water and sewerage capacity will be required during the planning period of 2000 to 2030, as water and sewer demand are each projected to increase by 85,740 gpd as a result of residential and non-residential (commercial and/or industrial) infill and development. Capacity for future commercial and industrial development also should be factored into the Town's allocation process, as should development of Millington's remaining infill potential and the Millington Growth Area, projected to occur after 2030.

Development of the Growth Area will likely require additional upgrades to water and wastewater treatment systems. Water system upgrades may include new wells, storage tanks, and distribution facilities. Sewer upgrades may include a hybrid wastewater system that provides a point source discharge treatment plant (Enhanced Nutrient Removal-ENR), new distribution system, and spray irrigation or rapid infiltration.

¹ Outstanding allocations are the number of sewer connections allocated to properties approved for development but not yet developed. In January 2008 there were 105 allocation commitments, with a total outstanding allocation of 26,250 gpd.

POTENTIAL IMPACTS ASSOCIATED WITH THE GROWTH & ANNEXATION AREA

Annexation of Millington Growth Area is not anticipated within the planning period from 2000 to 2030. The Millington Growth Area is approximately 205 acres (see Table 5-9).

Table 5-9: Impacts Of Millington Growth On Public Facilities & Services Growth Area Planning Period – Beyond 2030	
Classification	Growth Area
Dwelling Units – New Development	423
Dwelling Units – Other Infill	22
TOTAL DWELLING UNITS	445
Population	1,073
Sewer (gallons per day - GPD)	111,250
Water (gallons per day - GPD)	111,250
School (new students)	212
- High School	69
- Middle School	48
- Elementary School	96
Library (gross floor area - GFA)	113
Police (personnel)	3
Recreation Land (acres)	34
Fire & Rescue (Emergency Services)	
- Personnel	2
- Facilities (gross floor area - GFA)	908

Source: Peter Johnston & Associates, LLC

The hypothetical impacts for the Millington Growth Area are calculated based on potential additional dwelling units and population. The Growth Area includes a potential total of 445 dwelling units. In addition, population is estimated at 1,073 new Town residents. Most of the substantial impacts of developing the Millington Growth Area will be experienced by the Town of Millington and Kent County.

Accommodating growth in the Growth Area will require an expansion of school facilities (see discussion of State-rated school capacity in the Community Facilities chapter). It also will require increases in personnel for police and fire and rescue (emergency services). Emergency services needs include additional square footage for facilities. Water and sewer demand will increase substantially, by an additional 111,250 gpd in each category. Development of the Millington Growth Area will require new water and wastewater systems.

INTER-JURISDICTIONAL COORDINATION

The 2008 *Millington Comprehensive Plan* highlights the need for increased inter-jurisdictional coordination with Kent and Queen Anne's Counties. From Millington's perspective, substantive issues include the following:

- Priority Funding Areas (PFAs) in Kent and Queen Anne's Counties should be coordinated. Large PFAs in Kent County are located near the Town of Millington to the east and west. In addition, several large agricultural parcels are shown as County PFAs in Queen Anne's County, adjacent to the Town. These areas are located on the Chester River within the Critical Area and the 100-Year Floodplain.
- Peripheral development in Kent and Queen Anne's Counties, within the Millington Growth Area and Greenbelt, is a concern and should be discouraged. The Town believes that new development in and around the Town should be consistent with Smart Growth and sound place-making principles. Kent County and Queen Anne's County should work closely with the Town to address the nature of allowable development adjacent to the Town.

COORDINATION FOR EFFECTIVE GROWTH MANAGEMENT

It is apparent from the prior discussion of growth-related impacts that there is a critical need for the Town and counties to work together. Future growth will depend on sound strategies to address such issues as water quality and quantity, school capacity, demand on emergency services, public infrastructure, and transportation facilities. Growth management in Millington primarily hinges on effective coordination between the Town and Kent County because municipal growth and development plans are located in Kent County. This sentiment was underscored by the *Kent County Comprehensive Plan* and provides an open dialogue to begin discussions.

Like public infrastructure, water quality and quantity issues cannot be addressed by the Town alone. Going forward, effective management of non-point source pollution must be based on watershed-wide land use strategies and coordinated administration and enforcement of sediment and erosion control and stormwater management regulations. The planning requirements from Maryland House Bill 1141 direct the Town and County Planning Commissions to meet and discuss this Comprehensive Plan prior to adoption.

At a minimum, an agenda for such a joint County/Town meeting should include how best to coordinate the following:

- Cooperative watershed planning initiatives including discussions of failing septic system areas in the County and the role of public water and wastewater;
- Coordinated policies concerning County land uses and PFA designations adjacent or near the Town;
- Coordinated policies concerning conservation of green infrastructure and the Millington Greenbelt;
- Funding for public facilities and services, i.e., Adequate Public Facilities Ordinance, impact fees, tax differential and excise taxes.

Effective mechanisms for County/Town dialogue, coordination, and agreement are needed. Acceptable coordinated strategies should be formalized in ways that bind each participant to a policy process. Forums for on-going coordination and cooperation include the Kent County Council of Governments (COG), sanitary districts, joint steering committees (for example for watershed planning initiatives), and others.

Examples of potential formal mechanisms for recording joint policies include Memorandums of Understanding (MOU) and/or an Inter-Governmental Agreement (IGA). An assessment of the direction for future development patterns in Kent County is needed as a critical step in the broader process.

SUMMARY

Millington population projections are based on an average annual growth rate of 5.8% which is indicative of rapid growth. The projections rely on the basic assumption that the Wicks property will commence development after 2010 and develop at an average rate of 10 dwelling units per year or 100 dwelling units per decade. The Annexation agreement for this property would allow up to 10 percent of the development project annually which could result in as many as 70 units per year. Regardless of when actual development commences (2010 or later), or how quickly it proceeds (10 units per year or 70 units per year), the impacts over time will be the same and will need to be addressed. For this reason it is critical that the Town anticipate these consequences of growth and have policies and strategies in place to address them well in advance of need.

Adequate Public Facilities Ordinance (APFO)

The Town could adopt an APFO. An APFO ties development approvals to the existing and planned capacity of infrastructure based on quantifiable levels of service for public facilities and services. Millington may consider the Queen Anne's County APFO as the basis of developing its own standards. In addition, an APFO could provide a set of specific standards and conditions for approval of an annexation petition or development of a Developers Rights and Responsibility Agreement (DRRA).

Developers Rights and Responsibility Agreement (DRRA)

Sewer capacity is the most limiting factor (approximately 71 units). Financing strategies for upgrades to the sewer system, including design and permitting, need to be addressed immediately. The Town should adopt legislation regulating DRRAs and require a DRRA that addresses financing of infrastructure improvements be executed prior to approval of any major development.

Fiscal Impacts/Impact Fees

Major development projects should be required to identify and address fiscal impacts to the Town. These impacts could be addressed in a DRRA executed prior to development approval. As an alternative the Town can adopt an impact fee ordinance. Impact fees, also known as exactions, extractions, contributions, and proffers, are the financial responsibilities which a municipality places upon a

developer to provide some or all of the physical improvements (from sewers and streets to parks and schools) necessitated by development and its impacts. Impact fees are levied as a condition for the approval of plat or building plans and subsequent permission to proceed with development. They are direct contributions by developers and may include dedication of land, construction of facilities, or payment of fees in lieu of these facilities. They can be levied through written provisions in ordinances or through negotiations.² For example, a fee could be levied to offset the cost of additional Town administration and meeting space, land can be dedicated for parks or schools and trails can be constructed to satisfy recreation land requirements.

Municipal Priority Funding Area (PFA)

A significant portion of the Town (Wicks Property) is not located in a Certified Priority Funding Area (PFA). The Town should amend its PFA boundaries to include all land within the corporate limits. In order to satisfy the requirements of “certification” the area must be zoned to permit an average density of at least 3.5 dwelling units per acre and the area must be served by a public or community sewer. The current R-1 zoning does not satisfy this requirement. In addition the Kent County Master Water and Sewer Plan may need to be amended to reflect a new service area. To date, the Town has not officially requested a zoning waiver or PFA designation from Kent County.

Chapter 6 Resource Conservation

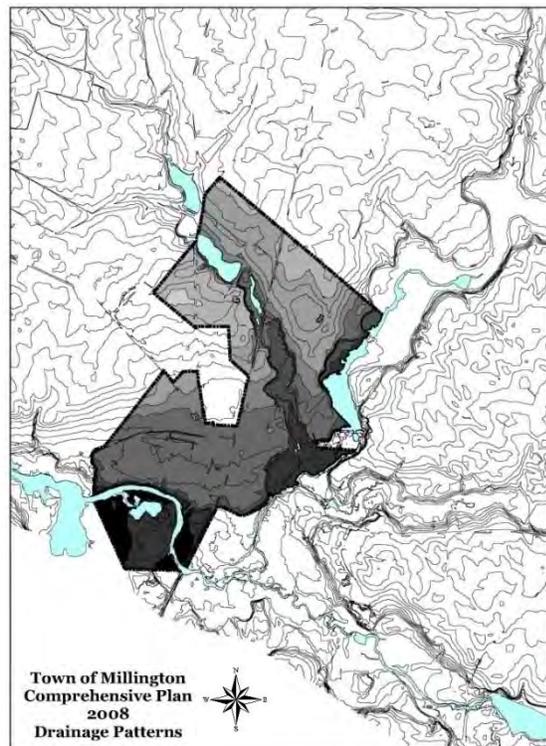

BACKGROUND

Managing growth and development in Millington must be balanced with consideration for the natural resources an essential component of the Town's quality of life. Millington's historic identity and present day charm are intertwined with its natural setting and its roots as a rural waterfront community. Conservation and the protection of key natural resources and sensitive areas will be crucial to preserving the character of Millington.

The Town is situated on the banks of the Chester River, a tributary of the Chesapeake Bay. Throughout the Town there are areas that are susceptible to environmental degradation due to the presence or proximity of sensitive natural features such as the Chesapeake Bay Critical Area, floodplain, wetlands, as well as sensitive wild plant and animal species and their habitats.

TOPOGRAPHIC FEATURES

Millington is located in the Atlantic Coastal Plain, which is characterized by comparatively low-lying topography with relief seldom exceeding eighty feet above sea level. The countryside around the Town is a broad, gently rolling plain, broken only by the small streams and lakes which feed the Chester River. The Town occupies a relatively flat cleared site along the river. Most of the land in the planning area has been cleared for agricultural uses. Primary drainage patterns are shown in the illustration to the right. Darker shading denotes lowest elevations while white denotes higher elevations.

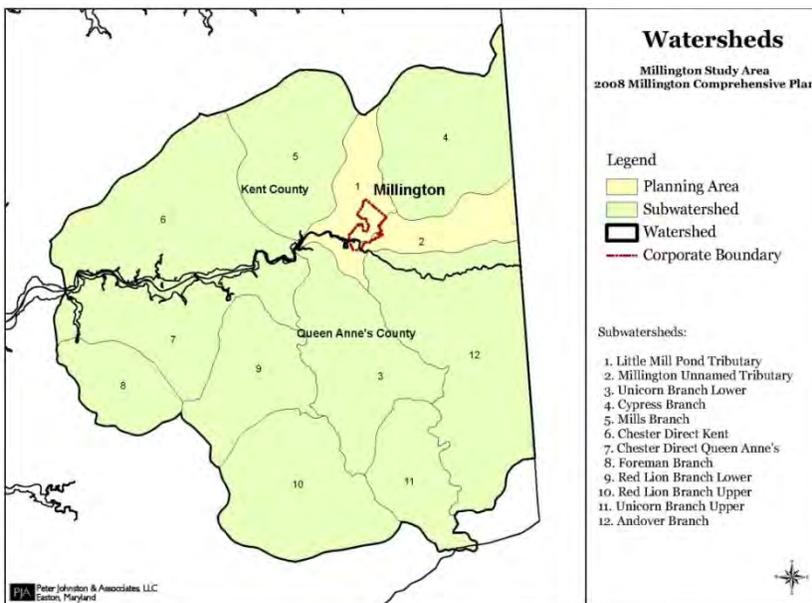

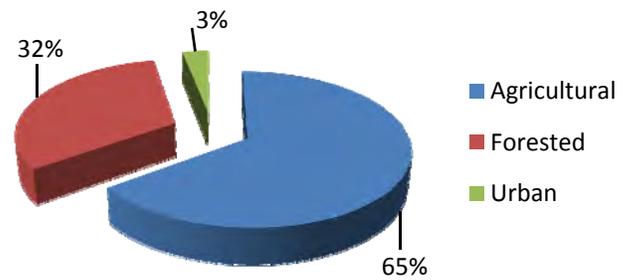

WATERSHED

Millington is situated within the Upper Chester River Watershed, within the following subwatersheds: the Little Mill Pond Tributary (01) and (02) an unnamed Millington Tributary (02) (see Figure 6-1: Watersheds). The Upper Chester River Watershed is approximately 113,485 acres and is located in Kent and Queen Anne's Counties, Maryland; its headwaters are in the State of Delaware. The watershed's northern region, which includes Millington, consists of uninhabited forests and wetlands some of which are part of the Millington Wildlife Management Area. The watershed lies within the larger Upper Eastern Shore Tributary Basin.

Approximately 65% (56,176 acres) of the land in the watershed is categorized as agricultural land, 31% (26,958 acres) of land is forested, and 3% (2,932 acres) is designated as urban. The towns of Barclay, Millington, and Sudlersville are all located within the watershed. Of the 138 watersheds in Maryland, the Upper Chester is among those with the least impervious surface, the lowest population density, the most wetland loss, and the highest soil erodibility.¹

**FIGURE 6-1: Land Use in Watershed
Percent of Total**

In its 2005 study of the Upper Chester River Watershed, the Maryland Department of Natural Resources (DNR) reported the average percent of impervious surface in subwatersheds of the Upper Chester River Watershed is less than 2 percent, which suggest that significant impacts on habitat and water quality are limited to local areas rather than watershed-wide.²

For a detailed discussion of the Upper Chester River Watershed, including water quality total maximum daily loads (TMDLs) and watershed restoration strategies, refer to Chapter 7: Water Resources Element of this Plan.

SENSITIVE AREAS

The Maryland Economic Growth, Resource Protection and Planning Act of 1992 added the requirement to Article 66B of the Annotated Code of Maryland that comprehensive plans contain a Sensitive Areas Element, which describes how the jurisdiction will protect the following sensitive areas:

- Streams and their buffers;
- 100-year floodplain;

¹ Upper Chester River Watershed Restoration Action Strategies, June 2006

² Ibid

- Sensitive species habitats;
- Steep slopes; and
- Other sensitive areas a jurisdiction wants to protect from the adverse impacts of development.

In addition, during the 2006 legislative session, the Maryland General Assembly passed Maryland House Bill 1141 (HB 1141), which included expanding sensitive areas elements of comprehensive plans to include wetlands as well as agricultural and forest resource protection.

Sensitive areas make up a significant portion of the Town. Millington’s sensitive areas and their total acreage are illustrated on Map 6-1: Sensitive Areas and listed in Table 6-1.

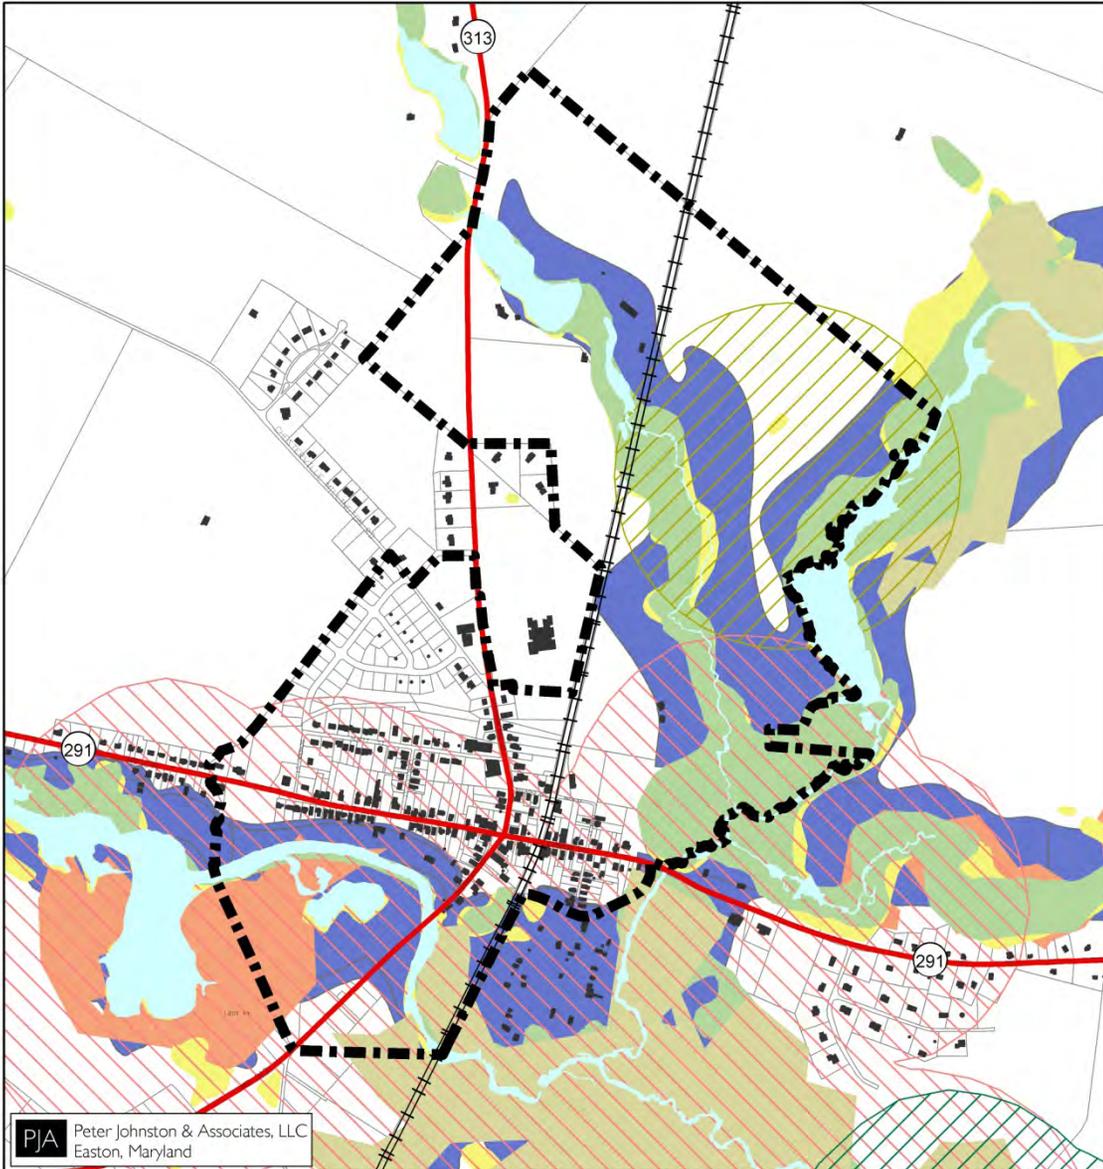

Table 6-1 Town of Millington Sensitive Areas		
Sensitive Area	Acreage	Percentage of Town
Floodplain	214	47%
DNR Wetlands	69	15%
NWI Wetlands	76	17%
Forest Interior Habitat (FIDS)	16	4%
High Quality FIDS	10	2%
Sensitive Species Habitats (SSPRA)	284	62%
Critical Area	114	25%

Source: MD Department of Natural Resources, FEMA, U.S. Fish and Wildlife Service

STREAMS & STREAM BUFFERS

Millington’s prosperity is due in large part to the many streams that flow into the Chester River. Millington has the distinction of being located at the headwaters of the Chester River, which begins near the southeastern edge of the Town at the confluence of two streams: 1) the Cypress and 2) Andover Branches. Rivers in the 18th and 19th centuries were key transportation routes for goods and people, and Millington’s position at the head of a major river was a significant benefit to the merchants and residents of the Town. Power provided by streams also helped fuel the success of the milling industry, which was linked to the Town’s earliest growth and prosperity.³

Final Version 05/27/09

Streams located in and around Millington are illustrated on the Sensitive Areas Map. They are home to various species of animals and plants. They also transport valuable nutrients, minerals, and vitamins to the Chester River and its tributaries and, in turn, the Chesapeake Bay. The streams around Millington also support recreational fishing and serve as spawning areas for commercial fish stock. In a "Stream Condition Survey" of the Upper Chester River Watershed conducted by the DNR as part of the *Upper Chester River Watershed Restoration Action Strategy* in 2007, the most common environmental concern reported was inadequate stream buffers.

Stream buffers are areas along the lengths of stream banks established to protect streams from man-made disturbances. Buffers are a "best management technique" that reduces sediment, nitrogen, phosphorus, and other runoff pollutants by acting as a filter, thus minimizing damage to streams. Stream buffers also improve habitat for fish and other stream life and provide habitat for wetland and upland plants. A wide variety of animals use the natural vegetation alongside streams as corridors for food and cover. These corridors are particularly important in areas where development has fragmented forests; a natural buffer system provides connections between remaining patches of forest that support wildlife movement.

Development and agricultural activity that consumes streamside forests and natural vegetation diminishes water quality in streams. The combined loss of open space and natural growth reduces the ability of remaining land along streams to buffer the effects of greater stormwater runoff, sedimentation, and higher levels of nutrient pollution.

The effectiveness of buffers to protect stream water quality depends on their width, which should take into account such factors as contiguous or nearby slopes, soil erodibility, and adjacent wetlands or floodplains as well as the type of vegetation within the buffer (some plants are more effective at nutrient uptake than others), and the maintenance of the buffer.

Millington has established development standards to protect streams and stream buffers in its Chesapeake Bay Critical Area Overlay District. These standards require retention or creation of natural buffers along all perennial and intermittent streams. The minimum perennial stream buffers must be expanded to include contiguous one-hundred-year floodplain and nontidal wetlands, hydric soils, highly erodible soils and soils on slopes greater than 15 percent to a maximum distance of 300 feet.

Millington's objectives for streams and stream buffers include protection and restoration of intact buffers and where necessary, enhancement of stream buffers to improve water quality. These objectives are discussed within the context of the Conservation Planning Area, in the Future Land Use section of the Land Use element of this Plan.

PUBLIC DRAINAGE SYSTEMS

The Millington Public Tax Drainage Ditch (PDA) is located in the north part of the Town and runs southwest from the railroad track, under Sassafras Street, to the stream located behind Robvanary Park, into which it flows. It provides drainage and flood control for the properties of one quarter of the Town's total population. The ditch system is approximately 3,433 feet in length. Flows from the ditch have the potential to significantly impact water quality in the Chester River.

The Millington PDA was established in 1973 to maintain the ditch. The Association is regulated by Article 25 of the Maryland Drainage Law and meets on an annual basis to elect managers, review tax income and maintenance liability, review plan activity from the previous year, determine plan activity for the upcoming year, and prepare an Operation and Maintenance Plan for the upcoming year. The ditch is inspected annually and after severe storm events. Maintenance and enforcement needs are determined by the elected managers of the PDA in conjunction with Kent Soil Conservation Service, Maryland Department of Agriculture and Department of Natural Resources.

The Operation and Maintenance Plan for the ditch notes that the extent of maintenance and repairs to the ditch are limited by the amount of tax monies collected annually by the Association. Inspection reports are used to schedule required maintenance; however the 2007 Plan notes that scheduled maintenance and repairs in the past may have been delayed due to circumstances beyond the control of the Association.

Maintenance includes the removal of debris, sediment deposits, sand bars, and undesired woody or vegetative growth. Undesirable woody growth is controlled by mowing ditch banks and berms. New sediment traps are installed after extensive cleanouts. The PDA maintains a minimum 10-foot filter strip on both sides of the ditch's main channel and lateral channels (access areas). Property owners along the ditch are responsible for keeping the ditch and drainage to the ditch from being obstructed. If obstruction occurs property owners are charged with a misdemeanor and fined.

In 2000, the Maryland Public Drainage Taskforce, in its report to the Chesapeake Bay Cabinet, issued recommendations for public drainage systems as they pertain to development and watershed planning. The recommendations made in the 2000 report include developing site-specific plans to slow the rate of water flow and improve habitat and the application of best management practices (BMPs) that incorporate the best achievable methods to reduce nutrient export and increase habitat quality. Recommendations also include the development of regulatory policies that direct the burden of costs required for altering public drainage (e.g., structural and non-structural stormwater features located up-stream or downstream of development) to the developers of property to be drained.⁴

⁴ *Moving Water*, A Report to the Chesapeake Bay Cabinet by the Public Drainage Task Force, Washington College and the Institute for Governmental Service at University of Maryland College Park, October 2000.

TIDAL & NONTIDAL WETLANDS AND WETLAND BUFFERS

Public and private (tidal) wetlands are important natural areas protected by State law (Title 9, Sections 9-101/9-301 of the Natural Resources Volume, Maryland Annotated Code) which sets forth strict licensing procedures for any alteration of wetlands. They are also within the protective jurisdiction of the federal government through the U.S. Army Corps of Engineers.

Millington is located near the tidal/non-tidal boundary of the Upper Chester River Watershed although non-tidal wetlands are predominant. A small system of Riverine (tidal) wetlands lies along the Chester River in the Queen Anne's County portion of the Town. A more extensive system of Palustrine wetlands can be found within and surrounding the Town, most notably in the south eastern end of the Town on the east side of Sassafras Avenue near Hazel Lane, and in the newly annexed portion of the Town, to the north. Palustrine system wetlands are shallow, non-tidal wetlands dominated by trees, shrubs, plants and undergrowth. Palustrine wetlands that border tidal wetlands (as they do in the areas of the Town along the Chester River) are considered to be of moderate to high significance for serving to temporarily hold coastal surge flood waters and to temporarily store water during storm events.

In its characterization of the Upper Chester River Watershed in 2005, the Maryland Department of Natural Resources (DNR) describe a large oxbow (abandoned stream channel or lakebed that is crescent-shaped) with "extensive tidal wetlands" that appeared to be forming west of Millington, possibly the site of the old Little Mill Pond. DNR also noted that parts of Millington near the headwaters of the Chester River have a history of flooding during high tides, as does the nearby railroad bridge and its embankment. Flooding, and its damaging impacts, is the result of high tides backing up the water flowing downstream from the headwaters and non-tidal tributaries of the Chester River.⁵

DNR has reviewed wetland protection opportunities in the Upper Chester River Watershed and identified opportunities for protection in the Millington area, including the oxbow wetlands mentioned above and forested floodplain and wetland corridors around the Town.⁶ The Town follows DNR and the Maryland Department of the Environment (MDE) policies and permit procedures governing activities that may affect tidal and non-tidal wetlands.

Public and private (tidal) wetlands are important natural areas protected by state law (Title 9, Sections 9-101/9-301 of the Natural Resources Volume, Maryland Annotated Code), which sets forth strict licensing procedures for any alteration of wetlands. They are also within the protective jurisdiction of the federal government through the U.S. Army Corps of Engineers. Town policies and regulations regarding wetlands require compliance with State and Federal wetland regulations. A twenty-five-foot setback from all non-tidal wetlands is required for all development around the

⁵ "Characterization of the Upper Chester River Watershed in Kent County and Queen Anne's County", Maryland Department of Natural Resources Watershed Services In Partnership With Queen Anne's County and Kent County, March 2005
⁶ Ibid

extent of the delineated non-tidal wetland except as may be permitted by the U.S. Army Corp of Engineers and the State of Maryland, Department of Natural Resources, Non-tidal Wetland Division.

FLOODPLAIN

Flood and flood-related losses are created by inappropriately located structures, which are inadequately elevated or otherwise unprotected and vulnerable to floods. Flood losses also can be created by development, which can increase flood damage to other lands when natural landscape patterns are altered as the result of on-site grading. While protection of life and property provided the initial basis for protection of floodplains, there has been a growing recognition in recent years that limiting disturbances within floodplains can serve a variety of additional functions with important public purposes and benefits.

Floodplains moderate and store floodwaters, absorb wave energies, and reduce erosion and sedimentation. Wetlands found within floodplains, as is the case in Millington, help maintain water quality, recharge groundwater supplies, protect fisheries, and provide habitat and natural corridors for wildlife. All these functions are best served if floodplains are kept in their natural state. Wherever possible, the natural characteristics of floodplains and their associated wetlands and water bodies should be preserved and enhanced.

Areas in Millington that are situated within the 100-year floodplain and therefore subject to periodic flooding include properties located along the Town's waterfront on the north side of the Chester River and a large section of the newly annexed northern portion of Town, west of Big Mill Pond (see Sensitive Areas Map). MDE notes sites in and near Millington, including railroad bridges and their embankments, with low elevations that are prone to flooding. MDE recommends additional efforts be made to reduce flood waters to protect structures in the Town in addition to nearby railroad bridges and embankments

Millington adopted a "Floodplain Ordinance" in 1992 to require appropriate construction practices within the floodplain. This protection is achieved through the review of all new development, new construction, and substantial improvements to existing structures in all floodplain zones and by the issuance of permits for those activities that comply with the objectives of the Floodplain Ordinance. Millington's Floodplain Ordinance states that "The purposes of this Ordinance are to protect human life and health, minimize property damage, encourage appropriate construction practices to minimize future damage, protect individuals from unwittingly buying land subject to flood hazards, and to protect water supply, sanitary sewage disposal, and natural drainage. The prevention of unwise development in areas subject to flooding will reduce financial burdens to the community and the State, and will prevent future displacement and suffering of its residents. This protection is achieved through the review of all activities proposed within identified floodplains and by the issuance of permits for those activities that comply with the objectives of this Ordinance.

The Ordinance requires development and new construction in the floodplain to meet certain flood protection measures including construction of the lowest floor one foot or above the base flood elevation and utilization of certified flood-proof construction techniques. Construction in the floodplain is prohibited unless an applicant can prove hardship (other than economic). Improvements that are not substantial are required to be constructed to minimize damage during flooding or be elevated to the greatest extent possible. Proposed floodplain subdivisions must submit plans for maintenance of forest cover, flood protection setbacks, re-vegetation, accommodation of stormwater runoff, and prevention of erosion.

The Millington Zoning Ordinance also establishes a Floodway Zone for all areas in the Town subject to flooding during a 100-year flooding event. Within this zone no modification, alteration, repair or new construction of buildings, structures or fill (or any combination of them) is allowed that would impair its ability to carry and discharge floodwaters or increase the water surface elevation of the 100-year flood by more than one foot.

In addition to floodplain regulations, the Town recently completed (in cooperation with Kent County) a “Hazard Mitigation Plan” that identifies strategies to reduce damage caused by flooding. It covers such actions as fuel tank anchoring, elevation of structures, structural retrofits, prevention methods, and public education. As part of this project, the Town agrees to work with future developers to mitigate flood hazards through planning practices that emphasize economic, social, and environmental sustainability.

SENSITIVE SPECIES & HABITATS

SENSITIVE SPECIES PROJECT REVIEW AREAS

DNR’s Wildlife and Heritage Division has identified Sensitive Species Project Review Areas (SSPRAs) in all Maryland jurisdictions. These areas are delineated to indicate potential threats from environmental impacts due to the proximity of certain sensitive species habitat. DNR designates these areas to provide local governments with information for assessing environmental impacts and reviewing potential development projects or land use changes within these areas.

DNR lists three SSPRAs totaling 1,900 acres in and around Millington. To the east of Town is a 313-acre area SSPRA that contains State-listed sensitive species. In the Town’s newly annexed northern portion, on the west side of Big Mill Pond, is an SSPRA containing federally-listed sensitive species. The southern half of Town lies within a 768-acre tract of SSPRA that contains sensitive species that are not State or federally listed but are of concern to the DNR.

In its characterization of the Upper Chester River Watershed, DNR notes spawning of anadromous fish including white perch, yellow perch and herring documented along the Chester River main stem to about one mile upstream of Millington.⁷

⁷ Ibid

FOREST INTERIOR DWELLING SPECIES (FIDS)

Healthy forests are crucial to soil, air and water quality. In addition to the functions they perform for humans, such as filtering the air, providing shade to cool streams, and holding soil in place, they also provide habitat to species that rely on the interior of forests to survive and reproduce.

DNR identifies potential Forest Interior Dwelling Species (FIDS) habitat areas for all jurisdictions in Maryland. A potential FIDS habitat is defined as a forest tract that is either greater than 50 acres with at least 10 acres of forest interior habitat (forest greater than 300 feet from the nearest forest edge), or riparian forests that are at least 300 feet in total width and greater than 50 acres in total forest area (the stream must be perennial).

Large blocks of high quality forest interior habitat tend to be along tributary stream corridors or in headwater areas for those streams. High quality FIDS habitat is defined as a predominantly mature hardwood or mixed hardwood-pine forest tract at least 100 acres in size, of which forest interior habitat comprises at least 25% of the total forest area. High quality FIDS habitats must contain one or more: a) highly area-sensitive species, b) riparian forest at least 600 feet in width, c) mature river terrace, ravine, or cove hardwoods, located at least 300 feet from the nearest forest edge, d) at least 5 contiguous acres of old growth forest located at least 300 feet from the nearest forest edge, or e) contiguous forest acreage of greater than 500 acres. A FIDS habitat with high quality contiguous interior forest greater than 500 acres is designated as Class 1. Class 2 FIDS is habitat with high quality contiguous interior forest less than 500 acres.

The forests in and around Millington contain habitat areas for FIDS. Within the Town there are 113 acres of FIDS habitat. A 301-acre tract of Class 2 high quality FIDS habitat extends southeast along both sides of the Chester River from the end of Sassafras Street to the Peacock Corner Road. There are 61 acres of Class 3 FIDS located just south of the far southwestern end of Millington, in Queen Anne's County. A 51-acre tract of Class 3 FIDS runs along the north side of Route 291 between Pippin Marsh and Peacock Corner. Both these tracks follow small tributaries.

The majority of land containing forest interior habitat in the Upper Chester River Watershed is vulnerable to conversion to other land uses. DNR's Millington Wildlife Management Area (WMA) encompasses some large areas of high quality forest interior habitat.

FORESTS & GREEN INFRASTRUCTURE

FORESTS

The protection of forests and woodlands is considered to be an essential element to attaining the goals set forth in the Town's Critical Area Program. The State criteria refer to two types of woodland areas: (1) forests, which are defined as "biological communities dominated by trees and other woody plants covering a land area of 1 or more acres;" and (2) developed woodlands, which are defined as "those areas of 1 acre or more in size which predominately contain trees and natural

vegetation and which also include residential, commercial, or industrial structures and uses." In addition to the areas described above the Town places equal importance on urban vegetation found in patches of less than one acre. Even though Millington is predominately developed, there are opportunities for the preservation and enhancement of wooded areas throughout the Town.

Woodland areas provide an array of benefits to the environment. Among them are the protection of water quality, including sediment and erosion control, stream bank stabilization, absorption of stormwater runoff, and reduction of nutrients and pollutants entering local waterbodies.

Forests and woodlands also provide a wide range of habitats used for protection and nesting, as well as a variety of food sources for many animals and aquatic ecosystems. Woodlands protect the aquatic ecosystem from harmful temperature fluctuations by decreasing the amount of light which reaches the water's surface. The ability of woodlands to decrease the amounts of sediments reaching surface water, and the amount of erosion of banks, shorelines and other areas also helps preserve the quality of aquatic habitats.

Forests also play a significant role in helping to reduce the levels of carbon dioxide (also known as a "greenhouse gas") in the atmosphere. As trees grow, they absorb carbon dioxide from the air and replace it with oxygen. The carbon is stored in tree trunks, branches and leaves. While young, actively-growing re-growth forests take in the largest amounts of carbon dioxide from the air, older and mature forests are an important storehouse of carbon, too.

In 1991, the State of Maryland enacted the *Forest Conservation Act* to protect the forests of Maryland by making forest conditions and character an integral part of the site planning process. It is regulated by the Maryland Department of Natural Resources, but implemented and administered by local governments. The law's intent is to maximize the benefits of forests and slow the loss of forest land, while allowing development to take place.

Millington adopted its own Forest Conservation Ordinance in August, 2006. It requires anyone making applications for subdivision, grading permit, or sediment control plan for a tract of 20,000 square feet or more to include a forest stand delineation and forest conservation plan for the lot or parcel on which the development is located (unless the activity is exempted). It also establishes forest conservation thresholds for all land use categories. Priority planting areas include buffers for streams, corridors to connect existing forests, buffers between differing land uses and expansion of existing forests. The use of native plant materials is encouraged but not required.

In addition, any parcel 10,000 square feet or larger in size must provide for reforestation (unless otherwise exempt). Forest conservation thresholds are listed in Table 6-2.

Table 6-2: Forest Conservation Threshold Requirements		
Category of Use	10,000+ sq. ft. Lot	20,000+ sq. ft. Lot
Agricultural and Resource Areas	50%	20%
Low Density Residential Areas	25%	15%
Medium Density Residential Areas	25%	20%
High Density Residential Areas	20%	20%
Institutional Development Areas	20%	15%
Commercial and industrial use area	15%	15%

Source: Millington Forest Conservation Ordinance, 2006

A forest retention credit is offered to property owners as an added incentive to retain forest cover. Each acre of forest retained above the threshold is credited against the total number of acres required for mitigation plantings. A break-even point exists, where clearing up to that point will not require mitigation.

Maintaining flexibility in design is the primary goal of Millington’s Forest Conservation regulations. The ordinance establishes a logical, preferred sequence from retention to restoration to replacement when disturbance of forest lands is unavoidable:

1. Selective clearing and supplemental planting;
2. On-site afforestation or reforestation;
3. Landscaping with an approved plan;
4. Off-site afforestation or reforestation; and
5. Natural regeneration on or off-site.

Within a development site, forested stream buffers must be established or expanded to a width of at least 50 feet, and forested corridors must be established or expanded to at least 300 feet to facilitate wildlife movement. Forest buffers adjacent to critical habitats must also be established or enhanced. Forest buffers are also required adjacent to differing land uses and to highways or utility rights of way. To increase the overall area of contiguous forest, the Town also requires that forested areas be established adjacent to existing forests (two tracts are considered noncontiguous if they are separated by at least 30 feet of non-forested habitat, such as a road, cropland, etc.).

Millington’s objectives for forest conservation within the Town are to maintain existing forest cover and to adopt a “no net loss” policy for forest land. These objectives are discussed within the context of the Conservation Planning Area (see Chapter 1: Land Use).

Tree Plan Ordinance

In March, 1990 the Town adopted a "Tree Plan Ordinance" that increases the stock of trees through tree planting programs. The Ordinance was created to encourage the planting of trees by both private citizens and public organizations. The ordinance sets high standards of maintenance and replacement of trees and increases efforts to diversify the variety of new trees planted in the Town. The Ordinance also mandates the preservation of natural forests within the Town boundaries, and requires that a maximum (or optimum) number of trees be retained or replaced when commercial or residential property is improved, developed, or redeveloped.

GREEN INFRASTRUCTURE

The Maryland 2000 *Green Infrastructure Assessment* (GIA) identifies green infrastructure as a network of waterways, wetlands, woodlands, wildlife habitats and other natural areas of State and countywide significance that supports native species, maintains natural ecological processes, sustains air and water resources, and contributes to health and quality of life. As an interconnected system, green infrastructure provides greater environmental viability, value, and function than the sum of the individual resources.

The GIA identified two types of important resource lands as "hubs" and "corridors" (see Map 6-2: Green Infrastructure). Hubs are typically large contiguous areas, separated by major roads and/or human land uses, that contain one or more of the following:

- Large blocks of contiguous interior forest containing at least 250 acres plus a transition zone of 300 feet;
- Large wetland complexes, with at least 250 acres of unmodified wetlands;
- Important animal and plant habitats of at least 100 acres, including rare, threatened, and endangered species locations, unique ecological communities, and migratory bird habitats;
- Relatively pristine stream and river segments (which, with adjacent forests and wetlands, are at least 100 acres) that support trout, mussels, and other sensitive aquatic organisms;
- Existing protected natural resource lands which contain one or more of the above features (e.g., state parks and forests, National Wildlife Refuges, etc).

Corridors are linear features connecting hubs together to help animals and plant species to move between hubs. Generally speaking, corridors connect hubs of similar type (hubs containing forests are connected to one another; while those consisting primarily of wetlands are connected to others containing wetlands). Corridors generally follow the best ecological or "most natural" routes between hubs. Typically these are streams with wide riparian buffers and healthy fish communities. Other good wildlife corridors include ridge lines or forested valleys. Developed areas, major roads, and other unsuitable features are not suitable corridors.

There are 192 acres of green infrastructure hub in Millington; they are part of a hub that starts in the Town and extends northeast into Delaware, covering 19,000 acres. In the southeast section of Town are 17 acres of another hub that extends south and east into Queen Anne’s County and covers about 8,000 acres.

When extensive forests are fragmented by development, the habitats of forest birds and other wildlife species are threatened. Therefore, it is important to consider the location of development, particularly if it threatens important green infrastructure. Forests also play a significant role in helping to reduce the levels of carbon dioxide in the atmosphere. As trees grow, they absorb carbon dioxide from the air and replace it with oxygen. The carbon is stored in tree trunks, branches and leaves. While young, actively-growing re-growth forests take in the largest amounts of carbon dioxide from the air, older and mature forests are an important storehouse of carbon, too.

In its 2006 Comprehensive Plan, Kent County recommends a strategy of coordination of natural resource conservation, green infrastructure, and sensitive area policies with its incorporated towns.⁸ Millington’s objectives for green infrastructure include protection and restoration of contiguous and interior forests and forest habitat. These objectives are discussed within the context of the Conservation Planning Area (see Chapter 1: Land Use).

CHESAPEAKE BAY CRITICAL AREA

The Chesapeake Bay Critical Area Protection Program (Natural Resources Article 8-181-8-1816) was passed by the Maryland General Assembly in 1984 because of concern for the decline of the quality and productivity of the waters of the Chesapeake Bay and its tributaries. The decline was found to have resulted, in part, from the cumulative effects of human activity that caused increased levels of pollutants, nutrients, toxins, and also from the decline in more protective land uses such as forest land and agricultural land in the Bay region. The Critical Area includes the Chesapeake Bay, its tributaries to the head of tide, tidal wetlands, plus all land and water within 1,000 feet beyond the landward boundary of these waters and wetlands. The General Assembly enacted the Critical Area law for the following purposes:

- To establish a Resource Protection Program for the Chesapeake Bay and its tributaries by fostering more sensitive development activity for certain shoreline areas so as to minimize damage to water quality and natural habitats; and
- To implement the Resource Protection Program on a cooperative basis between the State and affected local governments, with local governments establishing and implementing their programs in a consistent and uniform manner subject to State criteria and review.

Final Version 05/27/09

To achieve these two purposes, the law specified the creation of a Commission appointed by the Governor and representing the local jurisdictions, State agencies, and diverse interests. The Commission was charged with developing a specific set of criteria to regulate land use in the Critical Area, and the General Assembly approved these criteria during the 1986 legislative session (COMAR 27.01.01 -27.01.11). Subsequently, the Criteria were used by each of the affected local jurisdictions to prepare their own local Critical Area programs, ordinances, and regulations to manage and regulate land use within the Critical Area. The goals of the Critical Area program are to accomplish the following:

- To conserve fish, wildlife, and plant habitats; and
- To establish land use policies for development in the Critical Area which accommodate growth and address the fact that even if pollution is controlled, the number, movement, and activities of persons in that area can create adverse environmental impacts.

MILLINGTON CRITICAL AREA PROGRAM

The Town of Millington adopted a Critical Area Program along with a series of implementing provisions contained in the Millington Zoning Ordinance and Subdivision Regulations in June, 1988. The policies and goals included in the Millington Critical Area Program and the specific requirements and standards included in the Millington Zoning Ordinance and Subdivision Regulations were developed in accordance with the Critical Area Act and Criteria to accommodate future growth of the Town while addressing the associated environmental impacts.

The Town of Millington occupies about 450 acres. Of this total, approximately 120 acres or one quarter of the land area is included in the Critical Area (see Map 6-3: Critical Areas). Within the Critical Area, all development must be carefully designed to meet the regulatory requirements adopted in the Town's Zoning Ordinance and Subdivision Regulations. The Millington Critical Area Overlay District was created to implement regulations and measures designed to protect and enhance water quality and habitat resources located within the Town's Critical Area. The District provides special regulatory protection for the resources located within the Town Critical Area, minimizes negative impacts to water quality and natural habitats, and fosters more sensitive development along shoreline areas.

The Critical Area District encompasses all lands within and waters located within 1,000 feet of the landward boundaries of all tidal waters, tidal wetlands and tributary streams in the Millington Critical Area (see Map 6-3: Critical Areas). The District uses three different land use classifications to effectively implement different performance standards for development and redevelopment in those areas:

Intensely Developed Area (IDA)

IDAs are the most intense land use classification in the Critical Area. In accordance with the Criteria, IDAs are areas where residential, commercial, institutional and/or industrial development is predominant and relatively little natural habitat occurs. In the Millington IDA, density and minimum lot sizes are determined by the density regulations of the underlying base zoning districts. There are 68 acres of land in the Millington IDA (see Map 6-3: Critical Areas). The IDA is bounded on one side by the Chester River and the Town has enacted a buffer

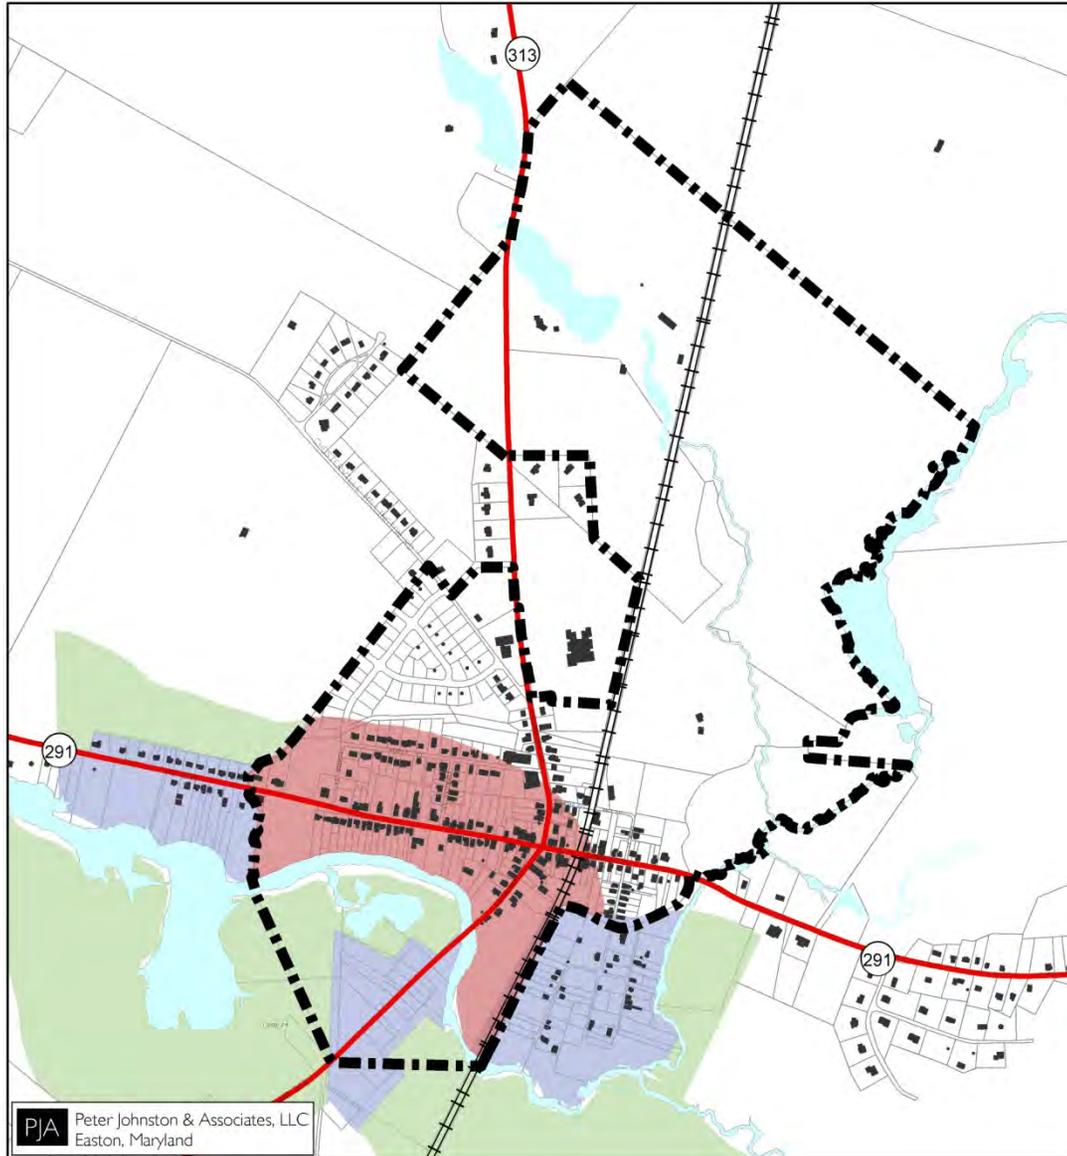

Limited Development Area (LDA)

LDAs are those areas developed in low or moderate intensity uses and contain areas of natural plant and animal habitats. The quality of runoff from these areas has not been substantially altered or impaired. As in the IDA, in the LDA, density and minimum lot sizes are determined by the density regulations of the underlying base zoning districts; however, in zoning districts that permit residential use, density may not exceed 3.99 dwelling units per acre. There are approximately 21 acres of LDA in Millington, located in the center of the Queen Anne's County portion of the Town, south of the Chester River. Additional LDA is located to the east and west of the Town boundaries in Kent County, along the Chester River.

Resource Conservation Area (RCA)

RCAs are areas characterized by nature-dominated environments such as wetlands, forests, and abandoned fields and areas where resource utilization activities (agriculture, forestry, fisheries activities, and aquaculture) take place. In the RCA, residential density may not exceed 1 one dwelling unit per 20 acres, regardless of the density regulations of the underlying base zone. Approximately 32 acres of land in Millington are located in the RCA. Within Town boundaries the RCA is located south of the Chester River in the Queen Anne's County portion of the Town. The RCA extends past the Town's east and west boundaries into Queen Anne's County, on the land bordering the Chester River.

The Critical Area Overlay District ordinance establishes development standards for all three land use areas. Development on grandfathered lots must comply with the development standards as much as possible. Development standards include requirements for identifying and protecting environmental and sensitive features located within the Critical Area, including but not limited to plant and wildlife habitat, forests and woodlands, hydric and highly erodible soils, steep slopes, streams, wetlands and shorelines.

- 1) IDA - 68 Acres
- 2) LDA - 21 Acres
- 3) RCA - 32 Acres
- 4) Total Critical Areas - 114 Acres

Final Version 05/27/09

The ordinance also establishes a Buffer Management Area within the IDA, LDA and RCA districts of the Critical Area. The Buffer Management Area is a 100-foot wide strip that extends landward from the shoreline boundary of the Critical Area. Because the Town's Critical Area land is entirely within the IDA, the Buffer Management Area is also entirely within the IDA. Development and redevelopment standards for the Buffer Management Area include regulations on existing and new structures, and planting offsets for impervious surfaces.

In its 2007 Comprehensive Plan, the Town recommended extending the review process of the Critical Area Program to include all land within Town boundaries to insure that sensitive areas are discovered through development review and established protections provided. While this Plan does not recommend an extension of the Critical Area to include all land within Town boundaries, it does recommend the enforcement of Resource Conservation Area-type standards in the proposed Conservation Area Overlay District, which will accomplish the same level of protection without requiring Critical Area Commission oversight.

Millington's Critical Area District ordinance establishes development standards for all three land use areas. Development standards include requirements for identifying and protecting environmental and sensitive features located within the Critical Area, including but not limited to plant and wildlife habitat, forests and woodlands, hydric and highly erodible soils, steep slopes, streams, wetlands and shorelines.

The ordinance also establishes a buffer management area within the IDA, LDA and RCA districts of the Critical Area. The buffer management area is a 100-foot wide strip that extends landward from the shoreline boundary of the Critical Area. No development, including septic systems, impervious surfaces, parking areas, roads or structures, is permitted in the buffer. Approved development or expansion of a water-dependent facility, as defined in the Town of Millington Zoning Ordinance, is exempt from the buffer provisions.

The buffer is expanded to include contiguous sensitive areas on parcels whose development or disturbance may impact streams, wetlands or other aquatic environments. Sensitive areas also include hydric soils, soils with hydric properties (as designated by the Soil Conservation Service), and highly erodible soils.

Within the LDA and the RCA impervious surfaces are limited to 15 percent of the gross site area proposed for development. For lots less than one acre, impervious surface may be up to 25 percent of the lot area.

The Town's objectives for Intensely Developed Areas include:

- Prevent the expansion of Intensely Developed areas (IDAs) into areas not designated Intensely Developed.
- Target Town (Intensely Developed Areas) stormwater management problem areas for public improvements to reduce runoff volumes and improve runoff water quality.

- Prevent expansion of development into buffer portions of the Intensely Developed Area or other Intensely Developed Areas designated as 'Habitat Protection Areas'.
- Encourage public access to the Town's shoreline.
- Establish programs for the creation and preservation of woodland resources and enhancement in Intensely Developed Areas in the form of urban forestry, street tree plantings, landscaping, and open land buffer plantings.
- Utilize programs which assist the Town in enhancing biological resources in IDAs which are protective of water quality and contribute to urban wildlife habitat.

Objectives for Limited Development Areas include:

- Maintain or improve the quality of runoff and groundwater entering streams and the Chester River.
- Protect existing areas of natural habitat.

PROTECTED LANDS

PARKS & OPEN SPACE

Parks and open space are protected lands. Program Open Space (POS) was established under the Maryland Department of Natural Resources in 1969 and is funded by the State's real estate transfer taxes. Revenue from the transfer tax is deposited in a special fund for the Program. POS funds are used by counties and municipalities to purchase and/or make improvements to parks and recreation lands. There are about 8.25 acres of park land and open space in Millington. Some of the Town's park facilities have been built or refurbished with POS funds. (see Chapter 4: Community Facilities).

MARYLAND DEPARTMENT OF NATURAL RESOURCES (DNR) LAND

Millington Wildlife Management Area

The Millington Wildlife Management Area (WMA) is a 4,000-acre parcel owned by DNR and located approximately 20 miles northeast of Millington. The WMA is comprised of hardwood forests, pine stands, various types of wetlands, meadow plantings, and both fallow managed fields and open agricultural fields. The WMA is open and accessible to the public year round; hunting and fishing are allowed in accordance with permits and open seasons.

Blackbird Millington Conservation Corridor

The Blackbird-Millington Corridor is a landscape of forests, farm fields, streams and tidal marshes that extends from the mouth of Blackbird Creek on the Delaware Bay in southern New Castle County to the town of Millington in neighboring Maryland. The Blackbird-Millington Conservation Corridor is a pristine blue-green ribbon of water and woodland The Blackbird-Millington Corridor

has been identified by nonprofit organizations and government agencies as a conservation priority. It is one of the few areas left on the Delmarva Peninsula containing large swaths of open space and high quality forest. Shallow freshwater wetlands known as coastal plain ponds nestle in the forests. In 2004, The Nature Conservancy and the Delaware Department of Natural Resources and Environmental Control (DNREC) Division of Fish and Wildlife entered into a partnership to develop a plan for the Blackbird-Millington Corridor that, if successfully followed, would preserve and enhance its most important natural resources and habitats. Over 60 experts from 30 organizations and agencies and 150 local residents and landowners participated in this effort.

SOILS

Soils in the northern half of Town (recently annexed portion) include:

- Sassafras sandy loam 5-10% slopes;
- Sassafras sandy loam 2-5% slopes;
- Sassafras loam 2-5% slopes;
- Fort Mott loamy sand 0-5% slopes;
- Fort Mott loamy sand, 5-10% slopes; and
- Bibb silt loam.

Soils in areas of the Town lying slightly north of but not adjacent to the Chester River include:

- Galestown loamy sand 0-5% slopes;
- Galestown loamy sand 5-15% slopes;
- Mattapex fine sandy loam 0-2% slopes; and
- Matapeake silt loam 2-5% slopes.

In areas lying adjacent to the Chester River in Kent County portion of the Town, soils include:

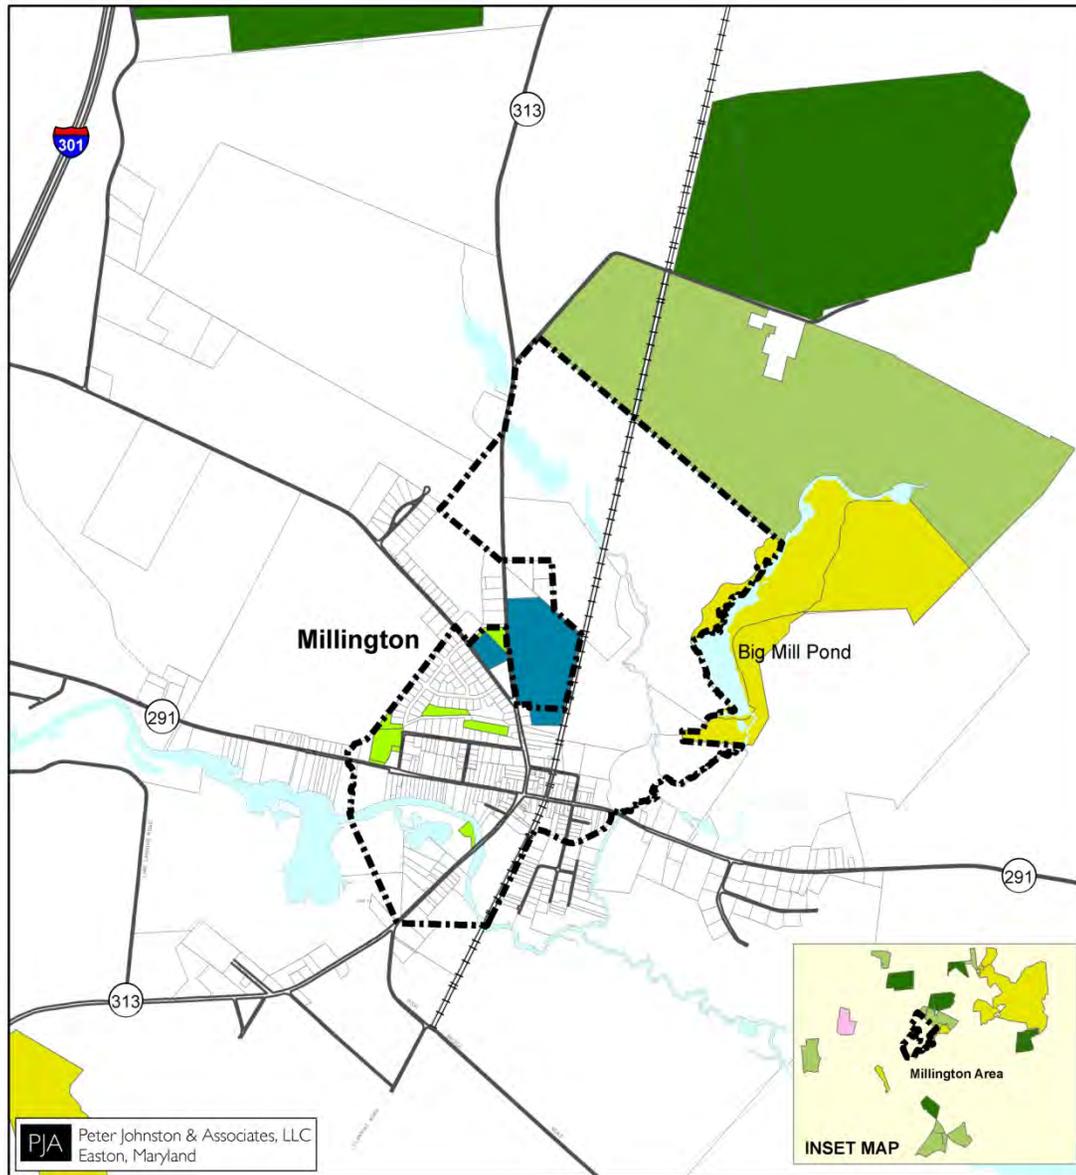

- Bibb silt loam; and
- Galestown loamy 5-15% slopes.

In areas lying adjacent to the Chester River in the Queen Anne's County portion of the Town, soils include:

- Longmarsh and Zekiah; and
- Longmarsh mucky loam.

Soils in the southernmost end of Town include:

- Fort Mott loamy 0-5 % slopes;
- Corsica mucky loam; and
- Longmarsh and Zekiah.

Final Version 05/27/09

The K factor value of soils is useful when combined with additional information about cropland, slope steepness, and distance to streams, as this would indicate areas where one best management practice--retirement of highly erodible land--would be most useful. High K factor values also raise warning flags about other, more urban activities near streams, such as road construction or utility placements.

Reforestation and afforestation should be encouraged on areas of highly erodible soils. Areas with highly and very highly erodible soils also offer the greatest potential for interventions addressing soil conservation such as the DNR's Conservation Reserve Enhancement Program (CREP) and riparian buffer forestation. Best management practices concerned with keeping topsoil in place would be ideal for implementation in these areas as well.

**MILLINGTON
SOIL TYPES - MILLINGTON VICINITY**

- 1) Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet.
- 2) Group B. Soils having a moderate infiltration rate when thoroughly wet.
- 3) Group C. Soils having a slow infiltration rate when thoroughly wet.
- 4) Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet.
- 5) Group B/D (Dual hydrologic Group): Drained areas having moderate infiltration rate, undrained areas having very slow infiltration rate.

Final Version 05/27/09

HYDROLOGIC SOILS

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of the following groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms

Group A: Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands.

Group B: Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture.

Group C: Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture.

Group D: Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a clay pan or clay layer at or near the surface, and soils that are shallow over nearly impervious material.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for un-drained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

The best drained soils in and around Millington are located on the eastern end of the Town (Group A soils, shown in green on Map 6-6). Areas in and around Millington that contain soils which are not well drained (shown in dark blue) or poorly drained (shown in red) include the central areas of the Town and land adjoining streams. These soils have severe limitations for development.

MINERAL RESOURCES

Article 66B, Annotated Code of Maryland, requires that each Comprehensive Plan contain a mineral resources element. If current geological information is available, the plan must show how mineral resources will be extracted or reserved for future use. Millington has no commercial quality mineral resources. The Town is of such a size and character that reservation of land for mineral extraction is not appropriate in any event.

Chapter 7 Water Resources

The Millington Comprehensive Plan’s “Water Resources Element” (WRE) is a basic planning requirement mandated by Maryland House Bill 1141 (HB 1141). The purpose of the WRE is to assess water resource capacity to meet current and future needs. Specifically, the statutory requirements are to:

- Identify drinking water and other water resources that will be adequate for the needs of existing and future development proposed in the land use element of the plan, considering available data provided by the Maryland Department of the Environment (MDE).
- Identify suitable receiving waters and land areas to meet the storm water management and wastewater treatment and disposal needs of existing and future development proposed in the land use element of the plan, considering available data provided by MDE.
- Adopt a WRE in the comprehensive plan on or before October 1, 2009, unless extensions are granted by Maryland Department of Planning (MDP) pursuant to law.

Zoning classifications of a property may not be changed after October 1, 2009 if a jurisdiction has not adopted a WRE in its comprehensive plan.

The WRE is directly linked to the following Plan elements: 1) the Land Use Plan; 2) the Municipal Growth element; 3) Community Facilities; and 4) Resource Conservation. The WRE addresses three major areas including water (both supply and quality), wastewater treatment and discharge, and stormwater management. Among other things, preparation of the WRE is an exercise intended to test water resource capacity limits, determine the potential implications of water resource issues for future growth, and facilitate development of management strategies.

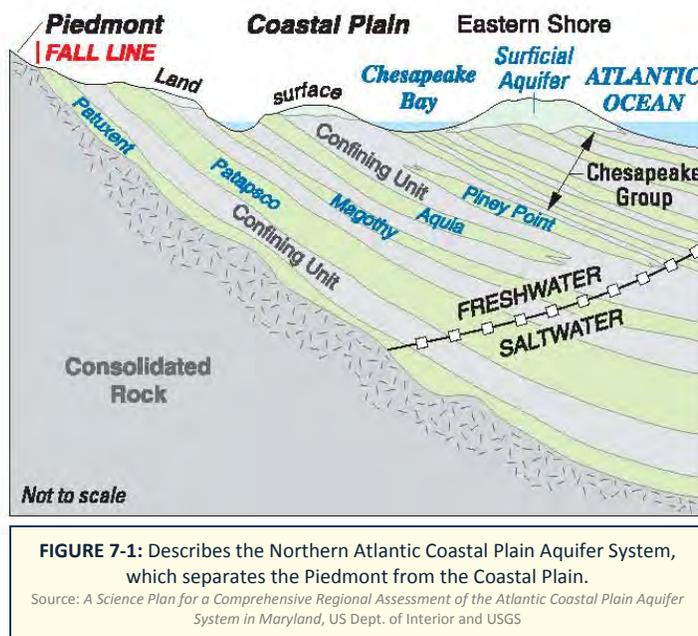

HYDROGEOLOGIC SETTING

The Town of Millington, located in Kent and Queen Anne’s Counties, Maryland, is part of the Northern Atlantic Coastal Plain aquifer system (NACP). The NACP system encompasses approximately 50,000 square miles that extend from the North Carolina and South Carolina border to Long Island, New York. As shown in Figure 7-1, in Maryland the aquifer system is bounded in the west by the Fall Line, which separates the Piedmont from the Coastal Plain physiographic province. It is bounded in the east by the Atlantic Ocean.¹

¹ *A Science Plan for a Comprehensive Regional Assessment of the Atlantic Coastal Plain Aquifer System in Maryland* (Open-File Report 2007–1205), by Robert J. Shedlock, David W. Bolton, Emery T. Cleaves, James M. Gerhart, and Mark R. Nardi, U.S. Department of the Interior and U.S. Geological Survey, prepared in cooperation with the Maryland Geological Survey, the Maryland Department of Natural Resources and the Maryland Department of the Environment.

REGIONAL WATER RESOURCES

The Atlantic Coastal Plain aquifer system in Maryland consists of an alternating series of aquifers and confining units that descend and widen as they extend toward the Atlantic Ocean (see Figure 7-1). The major aquifers in the Coastal Plain system are the Patuxent, Patapsco, Magothy, Aquia and Piney Point Formations, and the Chesapeake Group. The sediments that form the aquifers and confining units range in age from Cretaceous to Quaternary. Most of the Eastern Shore is covered by loose sediments, in layers containing gravel, sand, silt and clay deposited during the present post-glacial period (Tertiary).

Total ground water use in Maryland exceeds 214 million gallons per day.² The urban areas of Baltimore and Washington, D.C. make up the largest percentage of the State's water usage, and their water supply is derived from surface water sources. In Maryland's Coastal Plain counties, which include southern Maryland and the Eastern Shore, ground water comprises 86 percent of the total water use.³

Groundwater in the Coastal Plain is drawn from unconfined (natural water table) and confined (artesian) aquifers. Unconfined aquifers are recharged by rainfall and snow melt and depleted by drought, resulting in fluctuating water levels. Artesian aquifers receive recharge from areas where water-bearing formations crop out, leakage through confining beds, and lateral movement of water from adjacent aquifers. Artesian aquifers are much less vulnerable to drought conditions.⁴

The natural water quality of Coastal Plain ground water is generally good and ranges from very soft to very hard with the average in the moderately soft range (Vokes and Edwards, 1974). Most Coastal Plain aquifers contain both fresh and salt water. Water directly below recharge areas is fresh; salt levels increase with aquifer depth and proximity to the ocean. The location of the freshwater-salt water boundary (zone of diffusion) depends on the volume of fresh water entering the aquifer from recharge or leakage.

² *An Overview of Wetlands and Water Resources of Maryland*, by Denise Clearwater, Paryse Turgeon, Christi Noble, and Julie Labranche. Prepared for Maryland Wetland Conservation Plan Work Group, January 2000

³ Ibid.

⁴ Ibid.

One of the most common problems in Coastal Plain aquifers is salt water intrusion. Some parts of the confined aquifers in the system have been affected by intrusion of brackish or saline water, notably in more heavily populated areas along the coastlines of the Bay (Annapolis, Kent Island) and the Atlantic Ocean (Ocean City) where water usage is greater.⁵

According to the Maryland Department of Natural Resources and the Resource Assessment Service of the Maryland Geological Survey Report of Investigations Number 68⁶, published in 1998, five major aquifers supply ground water to users in Kent County and the Queen Anne's County portion of Millington:

- The Columbia Aquifer: the shallowest aquifer used for small domestic supplies. Its water levels vary seasonally.
- The Aquia Aquifer: underlies the Columbia aquifer in most of the southeastern part of Kent County. Because it is semi-confined in most of that area, its water levels vary seasonally and in response to pumpage by large ground-water users.
- The Monmouth Aquifer: underlies the Aquia aquifer and is confined in most of Kent County. It is used for domestic and small commercial supplies in the central part of the county. Water levels in the Monmouth aquifer respond to pumpage by nearby large ground-water users, but show very little seasonal variance.
- The Magothy Aquifer: underlies the Monmouth aquifer and is used for small commercial and domestic supplies in the northwestern part of Kent County where the Aquia is absent, and for large community supplies elsewhere in the county. Water levels in the Magothy aquifer respond to pumpage by large ground-water users.
- The Upper Patapsco Aquifer: underlies the Magothy aquifer and is connected to it in parts of Kent County. The two aquifers act as a single unit.

The Town of Millington draws its water from the Aquia Aquifer. Scientific studies published in recent years indicate that water levels in the Aquia are dropping at a significant rate and that in some areas of Maryland the Aquia has reached its maximum allowable yield.⁷

In 2004, in its report to the Governor, the Maryland Advisory Committee on the Management and Protection of the State's Water Resources observed:

⁵ Ibid.

⁶ *Hydrogeology, Simulation of Ground-Water Flow, and Ground-Water Quality of the Upper Coastal Plain Aquifers in Kent County, Maryland*, by David D. Drummond, Report of Investigations Number 68, Department of Natural Resources and the Resource Assessment Service of the Maryland Geological Survey, prepared in cooperation with the United States Department of the Interior Geological Survey, 1998.

⁷ *Future of Water Supply from the Aquia and Magothy Aquifers in Southern Anne Arundel County, Maryland*, by David C. Andreasen 2002; *Effects of Withdrawals on Ground-Water Levels in Southern Maryland and the Adjacent Eastern Shore, 1980–2005*, by Daniel J. Soeder, Jeff P. Raffensperger, and Mark R. Nardi, Scientific Investigations Report 2007–5249, U.S. Department of the Interior U.S. Geological Survey

“One of the most vexing and complex water-resources issues in the State of Maryland is the declining ground water levels in the seven major confined Coastal Plain aquifers in the Southern and Eastern Shore areas of Maryland. These seven aquifers (Chesapeake, Piney Point, Aquia, Magothy, Upper Patapsco, Lower Patapsco, and Patuxent) are heavily used for water supply – about 80 million gallons per day of ground water is being withdrawn for various uses. Ground water levels are declining by an average of about 2 feet per year in these aquifers. As noted in the Southern Maryland pilot study, a comprehensive approach that assesses all the aquifers of the Maryland Coastal Plain and that includes the entire extent of each aquifer from the Fall Line to the Atlantic Coast is needed to adequately plan for future water withdrawals and to manage water level declines.”⁸

In 2007, the U.S. Department of the Interior (USDI) and U.S. Geological Survey (USGS) reported that “decades of increasing pumpage have caused ground-water levels in parts of the Maryland Coastal Plain to decline by as much as 2 feet per year in some areas of southern Maryland. Continued declines at this rate could affect the long-term sustainability of ground-water resources in Maryland's heavily populated Coastal Plain communities and the agricultural industry of the Eastern Shore.”⁹

The 2004 report of the Maryland Advisory Committee on the Management and Protection of the State's Water Resources recommended a comprehensive study of the sustainability of the entire Atlantic Coastal Plain aquifer system in Maryland, which is currently being undertaken by the U.S. Department of the Interior and U.S. Geological Survey, in cooperation with the Maryland Geological Survey and Maryland Department of the Environment. The assessment will be conducted in three phases and is expected to take 7 to 8 years to complete. The project is currently in Phase I, which was begun in 2006. A key component of the assessment will be the development of an aquifer information system designed to serve the needs of both water managers and scientific investigators. When fully developed, the system will serve as a web-based tool and will facilitate the use of ground-water management models for evaluation of a variety of water-management strategies.

MILLINGTON WATER SYSTEM

The Millington Water System serves properties in the Town and in two areas outside of the Town limits in Kent County, which include: 1) Sandfield, a community located adjacent to Millington's southeastern boundary; and 2) a small number of homes located along MD Route 291 west of the Town limits. In 2008, there are 404 connections to the system. The 2007 *Kent County Department of Water and Wastewater Annual Drinking Water Quality Report* indicated that Millington's water system meets all Federal and State requirements for safe drinking water.

A new water system was completed in 2005. Groundwater for the Town of Millington is drawn from three wells, located on Sassafras Street, which are part of a new water system completed in 2005. The system includes a treatment facility and a 250,000 gallon water storage tower.

MDE issues ground water appropriation permits (GAPs) that specify allowable average and maximum daily flow for municipal water systems. Annual average daily flow is the total volume of water flowing into a water facility during any consecutive 365 days, divided by 365 and expressed as million gallons per day (mgd) or gallons per day (gpd). Maximum daily flow capacity is the maximum quantity permitted to flow within a single 24-hour period.

FIGURE 7-2: Average Daily Water Usage

The current Groundwater Appropriation Permit (GAP) (KE2003G001/01) for the Town of Millington issued by MDE authorizes the annual average withdrawal of 137,000 gallons per day (gpd) and 205,000 gpd during the month of maximum use from three wells that draw from the Aquia aquifer. The current permit is set to expire on November 1, 2017.

PROJECTED WATER DEMAND

Calculations for future water demand in Millington are based on existing and projected future residential and non-residential water usage (see Municipal Growth element for detailed methodology of projected residential and non-residential development in the Town). A per-household water usage

multiplier of 250 gpd (MDE estimate of single family household daily water usage) was applied to the number of dwelling units projected to be built per year within the Town. A factor of 200 gpd per 1,000 square feet gross floor area was used to calculate water demand for non-residential uses (e.g., commercial, industrial, office, institutional).

Table 7-2: Projected Water Usage – Existing DUs, Infill and Development 2010 - 2030					
Classification	2010	2015	2020	2025	2030
Total Dwelling Units (in Town)	216	246	296	371	471
Total Residential Water Usage (250 gpd x DUs) *	54,000	61,564	74,064	92,814	117,814
Total Non-Residential Water Usage	0	8,740	8,740	8,740	8,740
Total Water Usage	54,000	70,304	82,804	101,554	126,554
% Average Daily Withdrawal	39%	51%	60%	74%	92%

Notes:

* Includes in and out of town connections

Dwelling unit projections assumes existing 163 DUs, Mill Village 53 DUs, Wick's Property 10 DUs/yr beginning 2011, and 41 existing infill properties 3 DUs/yr beginning after 2015.

Non-residential usage assumes total gross non-residential floor area of 43,700 sq.ft., 200 gpd/1,000 sq.ft., with new non-residential development not coming on line until 2015.

Average daily flow capacity: 137,000 (2007 Millington Water Appropriation and Use Permit)

Table 7-2 illustrates that by 2030, the end of the planning period, projected water usage will be over 90 percent of the system's permitted average daily flow of 137,000 gpd. Based on this estimate, Millington's drinking water and other water resources appear to be adequate for the needs of existing and future development through the planning period (2030).

Additional infill residential development within the Town is expected beyond the planning period. Feasibility planning for additional water supply as well as any additional, treatment, storage and distribution systems will be needed to serve the full anticipated build-out of the Town. Studies related to water supply, distribution and treatment capacity should be conducted at the time the system reaches 75 percent of capacity (projected to be on or about 2025). In addition to planning system expansion, a critical review of existing facilities may be needed to determine if repairs or improvements can be made to conserve or increase the current water supply. Similar studies should be performed at the time of annexations from designated growth areas are under review.

Furthermore, when the Town considers expansion of its water system, it also should explore the implications of drawing water from an aquifer other than the Aquia, which could include the necessity of drilling wells to increased depths, additional water treatment requirements, etc. Current available information indicates that the capacity of the Aquia aquifer is adequate to meet Millington's water needs during the planning period. At the same time, a number of federal and State studies indicate that the State's groundwater supply, particularly in aquifers that serve southern Maryland and the Eastern Shore, may be inadequate to meet demand in the future. The Town should regularly monitor available studies of water supply in the region and work with Kent County, Queen Anne's County and the State to assess the implications of new information for the Town's water management strategies. Of particular note is the Assessment of the Coastal Plain Aquifer System in Maryland and its companion data

information system. This study, which is anticipated to be completed by 2014, could provide new data that potentially impacts projections made for the planning period in this Plan. While current information from MDE, DNR and federal studies indicate no immediate shortage of the water from the Town's supply source (the Aquia aquifer) the Town should review the final assessment of the Coastal Plain aquifer system when it is made available and if necessary, reassess its strategies for insuring that Millington has an adequate supply of water to meet current and future needs.

MILLINGTON WASTEWATER SYSTEM

The Millington Wastewater Treatment Plant (WWTP) is located on the Queen Anne's County portion of Millington and discharges into the Chester River. The WWTP serves the Town of Millington and the same areas outside of the Town served by the Town's water system. The system was upgraded in 2006, has a design capacity of 145,000 gpd (0.145 mgd) and has a permitted average daily flow of 105,000 gpd (0.105 mgd). System improvements include Biological Nutrient Removal (BNR) and Ultra-Violet (UV) treatment.

As of 2008, there were approximately 404 connections to the Town's sewer system. The annual flows for the WWTP for the period 2005 to 2007 were relatively steady and varied by 3,000 gpd or less (see Table 7-3). The average annual flow for the WWTP for that period was 55,000 gpd (.055 mgd).

Classification	2005	2006	2007
Annual GPD Flow	57,000	54,000	55,000

Source: 2007 Sewage Flow Capacity Report, Millington WWTP, reported by Kent County

According to the most recent flow capacity report, the Millington WWTP has a reserve capacity of 17,750 gpd (see Table 7-4). This figure was derived from the permitted flow of 105,000 gpd minus the average annual flow (55,000 gpd), inflow and infiltration (6,000 gpd), and approved allocations (26,250).

Classification	GPD
Rated Design Flow	145,000
Permitted Flow	105,000
Average Annual Flow	55,000
Annual I & I Estimate	6,000
Gross Available Capacity	44,000
Approved Allocation Flow/Plat Flow	26,250
Reserve Capacity	17,750

Source: Kent County Flow Capacity Report, Millington Wastewater Treatment Plant

PROJECTED SEWER DEMAND

In the Planning Period

Calculations for future sewer demand in Millington are based on existing and projected future residential and non-residential sewer usage (see Municipal Growth element for detailed methodology of projected residential and non-residential development in the Town). A per-household sewer usage multiplier of 250 gpd (MDE estimate of single family household daily sewer usage) was applied to projected infill dwelling units(including one large property). A factor of 200 gallons per 1,000 square feet of gross floor area was used to calculate non-residential development sewer demand.

Classification	2010	2015	2020	2025	2030
Total Dwelling Units (in Town)	216	246	296	371	471
Total Residential Sewer Usage	54,000*	61,564	74,064	92,814	117,814
Total Non-Residential Sewer Usage	0	8,740	8,740	8,740	8,740
Total Projected Sewer Demand	54,000	70,304	82,804	101,554	126,554
% of Permitted Capacity	51%	67%	79%	97%	121%
Percent of Requested Capacity**	39%	50%	59%	73%	90%
Percent of Planned Capacity***	19%	24%	29%	35%	44%

• Includes usage from out-of-town connections

** The Town of Millington has requested MDE increase their permitted average daily flow to 0.140 mgd

*** According to Town officials, the existing WWTP was designed so that its capacity could be increased in-place by a factor of 2.

As shown in Table 7-5 projected sewer demand as a result of development within the Town will exceed the WWTP's remaining capacity (average daily flow) towards the end of the planning period (between 2025 and 2030).

Millington has a pending request with the Maryland Department of Environment to increase the Town's permitted daily flow from 0.105 mgd to 0.140 mgd. In addition, according to Town officials, a design consideration in the existing WWTP makes it feasible to double the capacity of the plant at the existing location. If the Town's request for a permitted flow increase is granted, the capacity of the existing WWTP will be adequate to serve demand through the planning period.

MDE recommends planning for system expansions or upgrades (including engineering studies and permit application for increased capacity) be undertaken when a plant reaches 75 percent of its rated design capacity. With an increase in permitted daily flow, the Millington WWTP is projected to be operating at 75 percent capacity around 2025.

Beyond the Planning Period

Additional infill residential development is anticipated beyond the planning period. The development potential of the proposed Millington Growth Area will also need to be considered in calculating future demands (beyond 2030) on the Town's sewer system. Consideration should be given for service to properties in the vicinity of the Town that have or may, at some point, have failing onsite septic systems. Long term strategies to address failing septic systems in the region should be the result of coordinated planning among the Town, Kent County, and Queen Anne's County.

Sewer service associated with the build-out of the incorporated area of the Town is projected to increase total demand to approximately 176,500 gallons per day. The level of demand would exceed the design capacity of the existing WWTP, requiring a plant expansion. If it is feasible to double the capacity of the WWTP and it is permitted by MDE, there will be adequate sewer treatment capacity to serve the build-out of the Town

The proposed Growth Area (see Growth Area Map, Municipal Growth Element) includes 207 acres, with an estimated potential build-out of 445 dwelling units and an estimated sewer demand of 111,250 gpd. Added to sewer demand associated with the build-out of existing properties within the Town, servicing the designated growth area represents nearly 100 percent of the planned capacity of the WWTP and will likely require the Town increase its WWTP's capacity beyond what is currently planned.

Considering soil constraints in the vicinity of Millington, it is likely that Millington will have to continue to rely on point source discharge methods of treatment to accommodate projected growth. Along with this situation, and given TMDL limits on point sources in the Upper Chester River Watershed, the Town will likely be required to achieve enhanced nutrient removal (ENR) standards for wastewater treatment at some point in the future.

WATER & SEWER ALLOCATION POLICY

Given the limited number of available connections remaining, without requiring a major expansion of the Millington Sewer and Water Systems, the Town adopted a water and sewer allocation policy in May 2006. The Town's policy for allocating sewer and water connections (Resolution 2006-2) gives existing citizens and businesses in the Town precedence in the award of sewer and water connections. Sewer and water allocations are then made in the following order of priority:

- First priority is given to infill lots and properties of record within the Town limits which are not presently developed or connected to the water and sewer systems and connections shall be reserved for such properties at all times;
- Second Priority is for expansion of existing uses and/or subdivisions of properties presently within the Town limits;

- Third priority is for connections outside of Town limits which provide for the creation of jobs and

- which are not in conflict or competition with existing businesses with the Town limits;
- Fourth Priority is for such other properties and uses as the Mayor and Council may elect to annex to the Town of Millington, and
 - Fifth Priority is for connections under contract with other governmental corporations, counties or municipalities.

Except for connections reserved for “First Priority” properties, no connections are reserved or awarded until connection fees have been paid in full. Award of these connections are at the sole discretion of the Mayor and Town Council.

WATERSHED CHARACTERISTICS

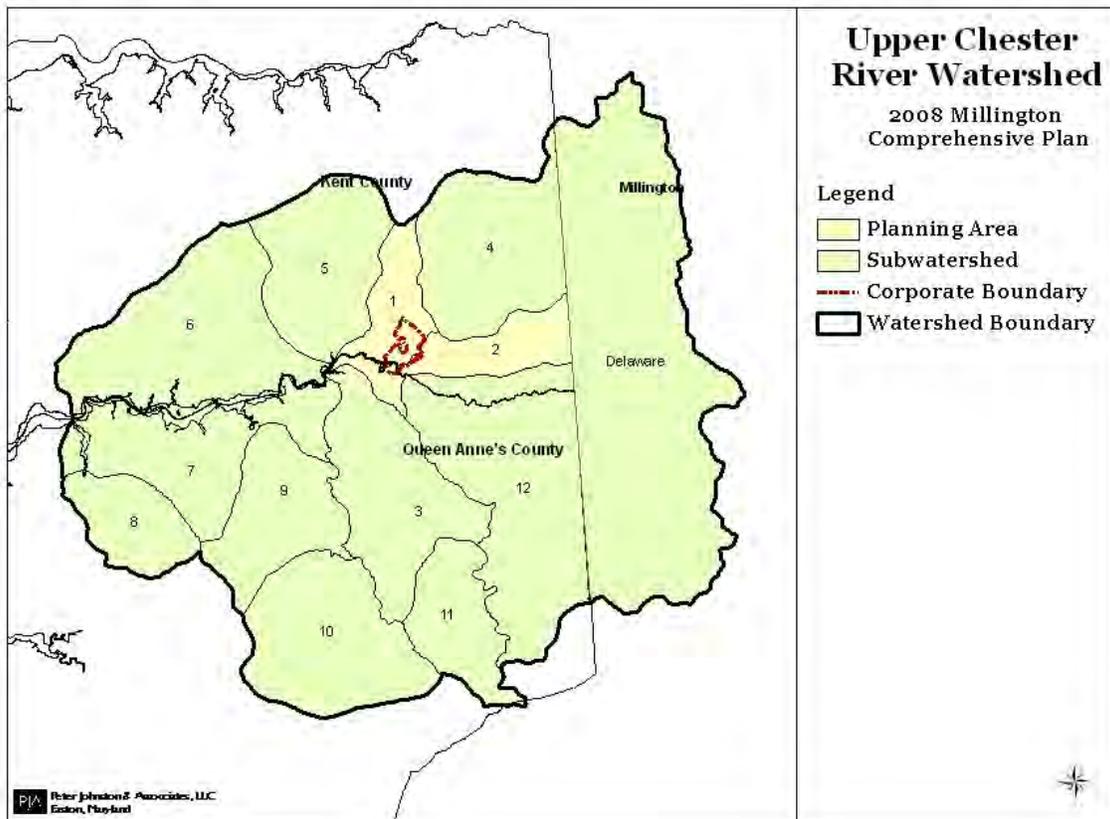

Millington is located in the Upper Chester River Watershed (see the Watershed Map below). The Upper Chester River Watershed covers approximately 113,485 acres and is located in Kent and Queen Anne’s Counties, Maryland and New Castle County and Kent County, Delaware. Its headwaters are located in Delaware. Land use (2002) in the Upper Chester River Watershed was predominantly mixed agriculture (62,897 acres or 54.5%), with forest (41,701 acres or 36.1%), urban (2,837 acres or 2.5%), and pasture (6,050 acres or 5.2%) lands.¹⁰

The watershed’s northern region, which includes Millington, consists of uninhabited forests and wetlands, some of which are part of the Millington Wildlife Management Area. The Upper Chester River Watershed in Maryland is comprised of 12 subwatersheds; land use within these subwatersheds is similar to that of the watershed – predominantly agriculture with a considerable amount of forest and a very small amount of urban, or developed land.¹¹ Millington is located almost entirely within, the Little Mill Pond Tributary subwatershed. A few acres within the Town’s westernmost boundaries lie within an unnamed Millington Tributary subwatershed.

¹⁰ “Characterization of the Upper Chester River Watershed in Kent County and Queen Anne’s County”,

Maryland Department of Natural Resources Watershed Services In Partnership With Queen Anne’s County and Kent County, March 2005

¹¹ Ibid.

WATER QUALITY ISSUES

The Upper Chester River was first identified on the State's 1996 303(d) list as impaired by nutrients, sediments, and bacteria, with listings added in 2002 for evidence of biological impacts. The listing for nutrient impairment was made due to signs of eutrophication – the over-enrichment of aquatic systems by excessive inputs of nutrients, especially nitrogen and phosphorus. Nutrients act as a fertilizer, causing excessive growth of aquatic plants which eventually die and decompose, leading to bacterial consumption of dissolved oxygen.

Water quality standards identify the uses for each water body, for example, drinking water supply, contact recreation (swimming), and/or aquatic life support (fishing). In Maryland's portion of the watershed, all streams and other surface waters are designated Use 1 for Water Contact Recreation and Protection of Aquatic Life.

Impairment to the streams and rivers in the watershed can be eliminated by limiting the amount of nutrients that enter the river. MDE, with approval from the EPA, established total maximum daily loads (TMDLs) for nitrogen and phosphorus in the Upper Chester River in 2006.¹² The water quality goal of

¹² "Total Maximum Daily Loads of Nitrogen and Phosphorus for the Upper and Middle Chester River, Kent and Queen Anne's Counties, Maryland", Final Report, Maryland Department of the Environment, April 2006

TMDLs is to reduce high chlorophyll concentrations (a surrogate for algal blooms) and to maintain dissolved oxygen at a level supportive of the river's designated uses.

TOTAL MAXIMUM DAILY LOADS – TMDLS

Under the terms of the *Federal Clean Water Act* (33 U.S.C. §§ 1251-1387) the U.S. Environmental Protection Agency (EPA) delegated authority to Maryland to implement a systematic technical and administrative framework for managing water quality. Delegated responsibilities include setting water quality standards, assessing water quality, identifying waters that do not meet standards, establishing limits on impairing substances, and issuing permits to ensure consistency with those pollutant limits.

The State must conduct scientific studies for waters that do not meet water quality standards due to an excessive pollutant load and determine the maximum amount of the pollutant that can be introduced to a waterbody and still meet standards. That maximum amount of pollutant is called a Total Maximum Daily Load (TMDL), and the studies are called "TMDL Analyses," or simply TMDLs. TMDLs are a regulatory mechanism to identify and implement additional controls on both point (i.e., wastewater treatment plants, urban stormwater) and non-point source (i.e., stormwater runoff, erosion) discharges in water bodies that are impaired from one or more pollutants and are not expected to be restored through normal point source controls.

Total Maximum Daily Loads (TMDLs) establish limits or "caps" on the amount of pollutants permitted from point (P) and non-point sources (NPS) through an allocation system and TMDL analysis defines a quantified framework for TMDL implementation. TMDLs are expressed as allowable loads of a specified pollutant by point and non-point sources. Point sources include wastewater treatment plants with direct discharge permits into waterways (National Pollutant Discharge Elimination System Permits-NPDES) and urban storm sewer systems.

The Upper Chester River Watershed has two minor municipal point sources: Millington WWTP and Sudlersville WWTP. Non-point sources are all discharges other than point source discharges. A TMDL is a calculation of the maximum amount of a pollutant, both point source and non-point source, that a water-body can receive and still meet water quality standards.

Legal responsibilities for water quality management, like sediment and erosion control, stormwater management and other activities that have a strong bearing on water quality, such as land use under purview of local government. "To maintain control over decisions that affect their communities, local jurisdictions have a stake in how the State's legal responsibilities for maintaining water quality standards are executed. In particular, local governments have an interest in the implementation of TMDLs. They are also best situated to address many aspects of implementation, due to their geographic proximity to the impaired waterbodies, and their direct role in decisions that affect local water quality."¹³

¹³ MD's 2006 TMDL Implementation Guidance for Local Governments, Maryland Department of the Environment, Document version: May 24, 2006

POINT AND NONPOINT SOURCE LOADING

Point sources are identifiable inputs of waste that are discharged via pipes or drains primarily from industrial facilities and municipal treatment plants into streams, rivers, lakes, or oceans. There are two permitted point sources that discharge nutrients to the Upper Chester River Watershed: the Millington waste water treatment plant (Millington WWTP), and the Sudlersville waste water treatment plant (Sudlersville WWTP).

Non-point source pollution occurs when rainfall, snowmelt, or irrigation runs over land or through the ground and gathers pollutants. Pollutants are then deposited into streams, rivers, lakes, and coastal waters or introduced into ground water. Stormwater runoff is a significant contributor to non-point source loading.

Stormwater runoff is part of the natural hydrologic process. Human activities such as urbanization and agriculture can alter natural drainage patterns and add pollutants to rivers, lakes, and streams as well as coastal bays and estuaries. Urban runoff can be a significant source of water pollution, including flows discharged from urban land uses into stormwater conveyance systems and receiving waters. In the past, efforts to control the discharge of stormwater focused on quantity (e.g. drainage, flood control etc.) and only to a limited extent on quality (e.g. sediment and erosion control).

More recently, awareness of the need to improve water quality has increased. With this awareness Federal, State and, local programs have been established to reduce pollutants contained in stormwater discharges to our waterways. These programs promote the concept and practice of managing pollution at the source, before it can cause environmental problems.

A significant consideration when managing for future growth is the assimilative capacity of receiving waters for stormwater runoff associated with urban land use. Among other descriptors, assimilative capacity can be expressed as TMDLs for the receiving waters.

Upper Chester River TMDLs

According the MDE, “the objective of the nutrient TMDLs that have been established for the Upper Chester River Watershed are to:

- Ensure that minimum Dissolve Oxygen (DO) concentrations specified for each designated use are maintained; and
- Resolve violations of narrative criteria associated with excess nutrient enrichment.

In order to achieve this objective, the MDE has established average annual nutrient TMDLs for the Upper Chester River for Total Nitrogen (TN) and Total Phosphorus (TP). These TMDLs are summarized in Table 7-6.

Classification	Total Nitrogen (TN) lbs/yr	Total Phosphorus (TP) (lbs/yr)
Non Point Source ¹	561,653	29,078
Point Source ²	26,451	3,810
Margin of Safety ³	26,507	1,466
Total	614,612	34,354

1. Excluding urban stormwater loads.
2. Including urban stormwater loads.
3. Representing 5% of agricultural loads.

Source: *Total Maximum Daily Loads of Nitrogen and Phosphorus for the Upper and Middle Chester River, Kent and Queen Anne's Counties, Maryland*, Maryland Department of the Environment, Final Report, April 2006

These TMDLs represent a substantial reduction from the baseline estimates of average annual loading used for modeling purposes (see Tables 7-7 and 7-8). As can be seen, significant reductions in overall NPS will be required in order to meet the TMDL caps. Further, the TMDLs establish a cap of no more than a total 40 percent of total nitrogen (TN) load and 25 percent of total phosphorous (TP) load during the growing season (May 1 through October 31) because of the particular water quality problems being addressed, i.e., low DO concentration and eutrophication. "Problems associated with eutrophication are most likely to occur during the growing season (May 1st to October 31st)... During the growing season, there is typically less stream flow available to flush the system, more sunlight to grow aquatic plants, and warmer temperatures, which are favorable conditions for biological processes of both plant growth and dead plant matter decay."¹⁴

MDE states that much of this difference will be addressed through implementation of a number of targeted programs. According to MDE, "it is reasonable to expect that NPS loads can be reduced during growing season conditions. The nutrient loads sources during growing season include dissolved forms of the impairing substances from groundwater, the effects of agricultural ditching and animals in the stream, and deposition of nutrients and organic matter to the stream bed from higher flow events. When these sources are controlled in combination, it is reasonable to achieve NPS reductions of the magnitude identified by this TMDL allocation."¹⁵

Classification	Average Annual Loading	Future Scenario	Change
Source	TN (lbs/yr)	TN (lbs/yr)	TN (lbs/yr)
Urban (Stormwater)	16,197	16,197	0
Point Source (WWTP)	12,144	10,254	-1,890
Agriculture NPS	1,095,347	503,640	-591,708

MDE cites several established programs as the basis for reasonable assurances that the nitrogen and phosphorus TMDLs will be achieved and maintained. These programs, as described by MDE, include the following:

Bay Restoration Fund Enhanced Nutrient Reduction (ENR)

The Bay Restoration Fund ENR program provides up to 100 percent state grant funds to local governments to retrofit or upgrade wastewater treatment plants (WWTP) to remove a greater portion of nutrients from discharges. ENR technologies allow sewage treatment plants to provide a highly advanced level of nutrient removal. The ENR strategy builds on the success of the biochemical nutrient removal (BNR) program already in place. Upon completion of the upgrade, the NPDES permits will require the permittee to make a best effort to meet the load goals providing reasonable assurance of implementation. The NPDES permits should also be consistent with the assumptions made in the TMDL (e.g., flow, effluent nutrients concentrations, CBOD, DO, etc.).

The Maryland Water Quality Improvement Act

The Maryland Water Quality Improvement Act “requires that comprehensive and enforceable nutrient management plans be developed, approved and implemented for all agricultural lands throughout

Maryland. This act specifically requires that nutrient management plans for nitrogen be developed and implemented by 2002, and plans for phosphorus to be done by 2005.

Maryland's Clean Water Action Plan

Maryland's Clean Water Action Plan was developed in a coordinated manner with the State's 303(d) process. The Upper Chester River Watershed is listed Category 3 Watersheds based in four or more indicators meeting Category 3 goals.

Chesapeake Bay Agreement

In the 1987 Chesapeake Bay Agreement Maryland made a commitment to reduce nutrient loads to the Chesapeake Bay. In 1992, the Bay Agreement was amended to include the development and implementation of plans to achieve these nutrient reduction goals. Maryland's resultant Tributary Strategies for Nutrient Reduction provides a framework supporting the implementation of NPS controls in the Upper Eastern Shore Tributary Strategy Basin, which includes the Upper Chester River Watersheds.

Five-Year Watershed Cycling Strategy

Maryland uses a five-year watershed cycling strategy to manage its waters. Pursuant to this strategy, the State is divided into five regions, and management activities will cycle through those regions over a five-year period. The cycle begins with intensive monitoring, followed by computer modeling, TMDL development, implementation activities, and follow-up evaluation. The choice of a five-year cycle is motivated by the five-year federal NPDES permit cycle. This continuing cycle ensures that every five years intensive follow-up monitoring will be performed. Thus, the watershed cycling strategy establishes a TMDL evaluation process that assures accountability.

Watershed Restoration Action Strategy (WRAS)

A Watershed Characterization Report and Stream Corridor Assessment (SCA) for the Upper Chester River completed by the Department of Natural Resources in 2005, provided the background development of the Upper Chester River Watershed WRAS. The Watershed Characterization Report summarizes readily available, natural resources and other data for the watershed including information on water quality, land use and cover, living resources, and habitat. The Stream Corridor Assessment is a survey designed to provide an overview of the condition of the stream system so that future restoration efforts can be better targeted. The most common environmental concern seen during the SCA survey of the Upper Chester River streams was inadequate buffers.

The Upper Chester River Watershed WRAS was completed in June 2006 by a workgroup composed of representatives from Kent and Queen Anne's counties, in a cooperative effort with the Maryland DNR. The purpose of WRAS is to present a strategy to reduce NPS pollution that contribute to impairments in the watershed, while at the same time conserving the unique, high quality natural resources. Strategies

are developed through the combined efforts of the general public, watershed stakeholders, local and county governments, non-profit organizations and State and Federal agencies.

The goals of the WRAS are:

1. Goal One: Improve Water Quality;
2. Goal Two: Protect and restore wildlife habitat; and
3. Goal Three: Sustain viable agriculture and retain small town community

Based on these goals, about 20 strategies were developed to guide local and regional initiatives aimed at improving conditions and conserving resources in the watershed. The strategies focus on water quality, wildlife habitat, agriculture, and small town communities. Strategies include initiatives recommended for jurisdictions and municipalities in the watershed in general and the Town of Millington, specifically, including:

- Develop a no net loss policy for wetlands, forests, stream buffers.
- Encourage local governments to be role models in restoring wetlands and planting buffers on public properties.
- Develop a no net increase policy for stormwater runoff.
- Have a community/neighborhood collectively install rain barrels and monitor change in runoff.
- Reexamine Millington's wastewater treatment facility and include upgrades to ENR/BNR.
- Reexamine sewer allocation policy/process so that projects that meet and/or exceed the WRAS Vision are given priority.
- Improve sediment conservation (public ditch maintenance, tax ditches, new construction and development sites, reforestation and aforestation, enforcement, enhance and expand buffers, investigate canopy loss from gypsy moths).
- Promote Public Ditch Association (PDA) Task Force recommendations.
- Expand sediment control regulations to make them applicable to smaller areas of disturbance.

Pertaining specifically to Millington, the WRAS recommends that Kent County and the Town of Millington undertake a reexamination of Millington's wastewater treatment facility, including the potential for upgrades to ENR/BNR. This is a WRAS Year One project/initiative with a performance goal of upgrading to meet concentrations of 3.0 mg/l or less total nitrogen and 0.3 mg/l or less total phosphorus.

The WRAS also recommends that Millington reexamine its current sewer allocation policy and process so that projects that meet and/or exceed the WRAS Vision for reductions in nutrient and phosphorous loadings are given priority. This is a WRAS Year Two project/initiative.

Atmospheric Deposition

MDE reported that, “EPA Region 4 and EPA Region 6 have indicated that reductions in atmospheric contributions will be accomplished over time through existing and proposed Clean Air Act regulatory controls that will ensure significant reduction in airborne nutrient loading on a nationwide basis by reducing atmospheric emissions.”

Federal Nonpoint Source Management Program

The Federal Nonpoint Source Management Program (§ 319 of the Clean Water Act) also provides funding for non point source implementation.

Delaware Portion of the Upper Chester River Watershed

Concerning the Delaware portion of the Upper Chester River Watershed, MDE’s stated position is, “a portion of the drainage basin of the Upper Chester River (also referred to as “Upstream”) lies in Delaware, beyond the jurisdictional and regulatory authority of Maryland. Load allocations to Delaware sources are consistent with and equitable to allocations given to sources in Maryland, and are reasonable and achievable with existing technology and practices. It will be incumbent upon the state of Delaware, and failing that the EPA, to ensure that this TMDL is implemented in Delaware.”

IMPLICATION OF THE TMDLS FOR MILLINGTON

POINT SOURCES: MILLINGTON WWTP

A basic assumption in MDE’s TMDL analysis is that point source loading of TN and TP will be reduced over baseline conditions with flows at maximum design values and the concentrations at current or future permitting goals.

For the Millington WWTP the effluent concentrations were assumed to be set at no more than 18.00 mg/l TN and 3.0mg/l TP on a maximum flow of 0.105 mdg (Millington WWTP permit limits under NPDES MD0020435). This means TMDL modeling assumed a maximum flow for the Millington WWTP of approximately 105,000 gpd. Current average daily flow is 55,000 gpd. After subtracting out committed sewer allocations and estimated infiltration and inflows, the maximum additional flow to the Millington WWTP is capped at 17,750 gpd (or about 71 EDUs under these parameters). In order to add capacity beyond 71 EDUs the Millington WWTP process will have to maintain or decrease effluent concentrations of TN and TP at modeled levels while increasing average daily flows by a factor of five or more.

URBAN NPS

The current reported water quality in the Upper Chester River indicates that the receiving waters do not have the assimilative capacity for additional loadings. Further, a basic assumption in MDE’s TMDL analysis is that TN and TP load from urban sources will remain constant. As can be seen in Table 7-9, Millington and the sub-watersheds surrounding it are a small part of the overall watershed (land area) and contributes minimal loading to receiving waters.

However, according to MDE, “for development where TMDL standards are not attained, post-development water quality should be improved over predevelopment levels....where this is not possible on-site, it might be necessary to consider off-site mitigation.”¹⁶ MDE further stresses the point that:

“Many existing local programs and activities already deserve credit for contributing to the goals of TMDL implementation. Local governments are encouraged to think about integrating the tracking of these program activities in order to begin accounting for quantified credits toward TMDL implementation. Taking credit for existing programs can be done both qualitatively and quantitatively. Local governments are encouraged to begin developing a qualitative inventory of activities for which credit should be acknowledged. Guidance also stresses a recognition that the efficient protection of water quality begins with a well-conceived comprehensive land use plan. This is particularly important for local jurisdictions that are presently engaged in the process of updating their comprehensive plans.”¹⁷

Infill development through 2030 in the Town, if completed, will increase urban land use within the watershed with a corresponding decrease in agriculture land use. As can be seen in Table 7-10, the net change in TN or TP loading will be minimal considering the small change in land use within the watershed and that any increases may be offset by the decreases in agriculture land use and the resultant decrease in pollutant loadings from agriculture uses.

Classification	Area (Acres)	Impervious Cover %	Annual Load			
			TN lbs/year	TP lbs/year	TSS lbs/year	FC # billion/year

Center for Watershed Protection -Pollution Loading Model

2002 Maryland Property View – MPV Land Use (Upper Chester River)

TMDL caps for non-point loading do not appear to be a significant constraint for future growth of the Town provided the Town’s management strategies can hold nonpoint source loading at or below current levels.

Chapter 8 Housing

Housing conditions are a major determinant of the quality of Millington’s neighborhoods. The focus of community planning is to improve the quality of life for residents and to promote the availability and affordability of decent, safe, and sanitary housing for all Town residents. Consequently housing and conservation of existing residential neighborhoods rank as an important local concern.

HOUSING & HOMEOWNERSHIP

The 2000 U.S. Census recorded 163 housing units in the Town of Millington. Half of these were built in 1939 or earlier; another 29 percent were built between 1939 and 1960 (see Table 8-1). Only 2 percent of the Town’s housing stock was built after 1990. Millington has more houses that predate 1960 than any other town in Kent County and the County itself.

Table 8-1: Comparison of Years Structures Built -2000

Classification	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Built 1999 to March 2000	0%	0%	11%	4%	0%	5%
Built 1995 to 1998	2%	6%	3%	6%	5%	6%
Built 1990 to 1994	0%	3%	6%	21%	7%	8%

Median Year Structure Built	1940	1940	1968	1967	1955	1967

Source: 2000 U.S. Census

Most of Millington’s housing stock (about 84 percent) is comprised of single family homes. The same is true, although to a slightly lesser degree, in all other towns in the County (see Table 8-2). Multi-unit structures make up about 14 percent of the Town’s housing – most of these are 3-4 unit buildings. Mobile homes account for the remainder of homes in Millington (4 percent).

Table 8-2: Comparison of Housing Units per Structure - 2000

Number of Units	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Total:	163	276	2,174	199	827	9,410

Source: 2000 U.S. Census

Slightly over 60 percent of the Town’s occupied homes were occupied by the homeowner in 2000 (see Table 8-3). This is the lowest percentage of homes occupied by owners in the County, with the exception of Chestertown, where the high percentage of renters is attributable to the Town’s large student population.

Table 8-3: Comparison of Home Owner and Renter Household Characteristics – 2000

Classification	Occupied housing units						
	Total	Owner	Renter	Average household size	Percent		
					Owner	1-person households	With householder 65 years and over
Kent County	7,666	70%	30%	2.33	70%	28%	31%
Betterton	164	70%	30%	2.29	70%	34%	24%
Chestertown	1,891	44%	56%	1.96	44%	42%	36%
Galena	190	69%	31%	2.23	69%	33%	36%
Millington	163	63%	37%	2.55	63%	28%	25%
Rock Hall	654	72%	28%	2.13	72%	32%	37%

Source: 2000 U.S. Census

The average home in Millington has six rooms; all homes have plumbing and kitchen facilities. Half of all homes in the Town are heated with fuel oil or kerosene, the remainder use gas and electric heating systems.

In 2000, the median value¹ of owner-occupied homes in Millington was lower than any other town in the County and the County itself. This is most likely due to the age and grade of most of Millington’s homes. Median home value in Betterton, which also has a large percentage of aged housing stock, is closest in comparison to Millington.

The addition of homes in Mill Village will result in a 30% increase in housing units in Millington.

Median price asked for vacant homes in Millington was significantly lower than all other towns, including Betterton, although it has probably increased since the decennial Census was taken due to the number of new homes that have been built in Mill Village beginning in 2005. At buildout the Mill Village subdivision will feature a total of about 50 new homes priced in the \$200,000s and higher. This will result in an overall increase of 30 percent in the Town’s housing stock.

Table 8-4: Comparison of Median Housing Value and Price Asked – 2000

Classification	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Median Value*	\$86,500	\$91,400	\$131,600	\$111,700	\$95,700	\$115,500
Median Price Asked**	\$50,000	\$91,700	\$194,600	\$90,000	\$85,000	\$93,600

* Median value of owner-occupied units

**Median price asked of vacant units

Source: 2000 U.S. Census

While housing values and prices in Millington are lower than most places in the County, rent in Millington is higher. Among towns, only Chestertown has a higher median rent and the County’s median rent is only a few dollars more than Millington’s (see Table 8-5).

Table 8-5: Comparison of Median Rent - 2000

Classification	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Median Contract Rent	\$432	\$323	\$465	\$350	\$308	\$439

Source: 2000 U.S. Census

Only 10 of Millington’s 163 housing units, approximately 4 percent of the Town’s housing stock, were vacant in 2000 (see Table 8-6). Of these, only 1 was vacant and available for rent. Most of the Town’s vacant housing stock is rented or sold but unoccupied and apparently unavailable for rent. This circumstance is not evident in any other town in the County. The lack of available rental units may be driving up the cost of rental housing in Millington.

¹ Median value and price asked are the Census respondent’s estimate of how much the property (house and lot, mobile home and lot, or condominium unit) would sell for if it were for sale.

Table 8-6: Comparison of Housing Unit Vacancy Status - 2000

Classification	Millington	Betterton	Chestertown	Galena	Rock Hall	Kent County
Total Vacant Units	10	108	274	9	178	1,744
For rent	10%	2%	57%	22%	3%	12%

* Units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

Source: 2000 U.S. Census

A number of homes in the Town, particularly rental housing units, reveal evidence of neglect and overcrowding. The 2007 Comprehensive Plan recommended that the Town undertake a program to improve the maintenance standards of multi-family rental housing through strong code enforcement, and stressed the Town’s responsibility for regular oversight and stringent enforcement policies. Currently the Town has a Code Enforcement Officer who inspects the Town for code violations on a weekly basis. Millington also has enacted a Rental Inspection/Permit Program which is enforced by the Code Enforcement Officer.

SUMMARY

- While Millington’s median housing value and price are almost the lowest among municipalities in the County, its median rent is almost the highest.
- The apparent lack of available rental housing may be driving up the cost of rental housing.
- The condition of housing units in Millington may be driving down home values and asking prices.
- Owners of older homes would benefit from access to State and federal renovation programs.
- Housing strategies in Millington should address overall housing conditions, including affordability, availability, accessibility and quality.
- Absentee landlords may be part of the poor housing condition problem. In the absence of attentive landlords, the Town must increase its oversight and enforcement efforts to ensure that housing conditions remain at uniformly satisfactory levels.
- State and federal programs may be able to assist homeowners with rehabilitation of older homes in poor condition.
- The relatively large percentage of housing units that have been bought or rented but remain vacant (for at least part of each year) may be housing for transient or migrant workers.
- Housing strategies in Millington should address the needs of the elderly, including affordability, accessibility, and special needs.
- Revisions to the Town’s regulations and policies can positively impact housing conditions and affordability.
- Any long-term strategy addressing adequate housing must, by necessity, address household income.

Chapter 9 Heritage Preservation

An important goal of the 2008 *Millington Comprehensive Plan* is to preserve the features that define the Town and its unique sense of place. These resources include valuable historic sites and structures; archeological areas; and key scenic, natural, and cultural landscapes.

BACKGROUND

Heritage resources within Millington are an important legacy for the Town and Kent County, Maryland. Heritage resources include sites and structures of significant historic value as well as cultural elements that define Millington's character. These resources span the 18th, 19th and early 20th centuries. Heritage resources include the Town's historic architecture, scenic settings, and the many natural resources that make this setting attractive.

Much of the Town's early historical structures have been lost over the years to fire, demolition, decay, neglect, and new development. Therefore, what little resources remain are extremely valuable, requiring sound stewardship for future generations. The preservation of heritage resource is vital, not only because these sites and structures provide Town character and cultural roots, but they also provide economic benefits. Heritage resources are one of Millington's primary attractions, providing significant and tangible value to the Town. Their loss or degradation potentially threatens to diminish potential future economic returns.

HISTORICAL SIGNIFICANCE

The Town of Millington, Maryland evolved over two centuries, initially from a ferry crossing in the late 17th Century to a crossroads village. Originally called "Head of Chester," much of Millington's historical significance is centered on transportation and commerce. This includes travel by river, road, and later railroad. Inns and taverns as well as local milling and agricultural industries were a vital part of the Town's evolution. According to the Maryland Historical Trust's (MHT) description of Millington's history, "transportation, with attendant hostelry, plus horse racing, tanning, and commerce, were important for the success of the Town." (Sheet 7.4 – Millington Survey District)

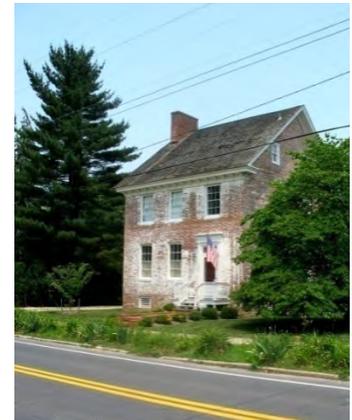

FIGURE 9-1: Sunset Hall is one Millington's most important 18th Century historic resources.

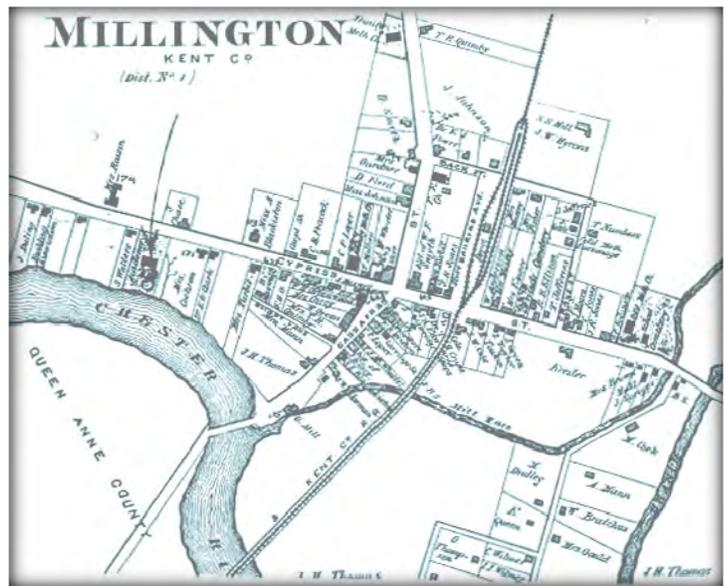

Millington was chartered by the Maryland General Assembly in 1798 and was officially incorporated in 1890. According to local historian Kevin Hemstock, "Millington grew up as a small village on the Chester River. The land on which it is located was settled in the late 17th century, even before the establishment of Chestertown. One of the earliest landowners was Daniel Toas, who held the patent on the London Bridge land tract, and who owned and operated a ferry at the Head of the Chester River, which the village was then called."

FIGURE 9-2: The Logan House was built in 1830 and is termed as a “colonial-carryover,” making it a very special architectural treasure for Kent County and the Millington.

Millington’s documented history begins in the later part of the 17th Century during the colonial period of America. In 1696, Kent County records indicated that a Daniel Jacob operated a ferry service on the Chester River near the present-day Town. In 1704, there were enough residents to petition for a road. Kent County officials ordered William Comegys to clear a road between the plantations of John Ellis and John Toas from Prickle Pear Mill to the Forest. Documents also refer to “old Toas Mill Branch” in the area, which was probably Cypress Branch, indicating that a mill existed during this time period.

Records show that in 1754, Daniel and Mary Massey secured a land grant near an advantageous river crossing, where a ferry service was operated. It was from this land grant that the Town originated. In 1764, Thomas Gilpin, Sr., a Quaker from Philadelphia, Pennsylvania, purchased 39 acres of land, which included a mill.

Much of this land is located in and around present-day Millington. Gilpin is mentioned in the 1923 *Evening Bulletin* as the founder of Millington. As a member of the “American Philosophical Society,” Gilpin was involved with planning a waterway that would be a shortcut for shipping from the Chesapeake Bay to the City of Philadelphia. A canal was eventually constructed across the Delmarva Peninsula at the Elk River in Cecil County (C&D Canal).

“Millington was no doubt a busy seat of commerce and agriculture in the period prior to the Civil War. It was the center of a large corn, wheat, and fruit growing area, and business was conducted downtown where hardware, clothing, and supply shops could be found along with a bank, hotels, and other businesses.”

FIGURE 9-3: Many finely detailed Victorian homes line Cypress Street in Millington along MD Route 291. These structures and their gardens provide an attractive setting for residents and tourists alike.

The Town continued to grow and prosper through the 18th and 19th Centuries. By the 1890's, Millington was a busy center of commerce aided by the railroad, which was constructed in the late 1860's. This technological innovation created a direct rapid travel route to the cities of Wilmington and Philadelphia from Millington and other points south. For a time, the Kent and Queen Anne's Railroad enabled Millington to become one of the largest shippers of peaches in the County, "...often winning an informal contest with the county seat for the number of bushels shipped."

A series of tragic fires in the past have destroyed many of Millington's historic structures. The first fire occurred in 1818. The second fire, in 1879, destroyed a large portion of the Town. The final fire in 1904 destroyed "...all but the westernmost part of the Town." According to the Maryland Historical Trust, the fire "...destroyed four acres of Millington including every store, both hotels, the Episcopal Chapel, the railroad depot, warehouses, and many dwellings." (Old Gale Store notes) From 1905 to 1920, Millington was rebuilt using more modern construction methods and architectural practices.

FIGURE 9-4: One of the Town's most significant historic resources, Gilpin's Mill was built in 1766 and is the oldest structure in Millington. The mill stayed in operation for almost 200 years, ceasing its functions in late 1950s.

In conclusion, the Town that would become Millington evolved around its milling industry, which was coupled with a ready-made transportation route on the Chester River. Originally, there were six mills within a three-mile radius of the Town. Early mills included grist mills, a saw mill, and a bark mill. One of the buildings constructed as a mill in 1766 still remains. It is situated on the Chester River along Sassafras Street, though it is no longer a mill. As shown in the image to the right, historic mill stone markers are on display, indicating the date the mill was constructed and when its use ceased.

Later transportation improvements, such as stage coach roads and the railroad, furthered Millington's success as a stopping point along a major travel route. The success of the Town during the railroad age in the 19th Century was coupled with the rise of Eastern Shore agricultural products, which were shipped to urban areas in the north such as Wilmington, Delaware and Philadelphia.

Today, Millington is a small Eastern Shore village in Kent County, Maryland. However, its rich history and character are important for its future success. This heritage forms the foundation of what makes Millington special and appealing to world abroad. As the Eastern Shore of Maryland grows, becoming more desirable for retirees, vacationers, and families, preserving this history is important for future generations.

HERITAGE RESOURCE INVENTORY

Resource inventories assist public and private entities to catalogue valuable historic sites and structures and other heritage resources. For the purpose of this Plan, resource inventories are based on information contained in the Maryland Historical Trust's (MHT) database and the Maryland Historical Trust's *Survey/Inventory of Historic Sites for Kent County, Maryland*. Noted historic sites and structures are included in Millington's Geographic Information System (GIS Mapping System), updated as part of this Comprehensive Plan process.

TOWN OF MILLINGTON HISTORIC DISTRICT - 1754 TO 1920 (K-684)

The Town of Millington, in Kent County, evolved as traditional crossroads village on the Eastern Shore of Maryland. According to the Maryland Historical Trust's (MHT) inventory, the "Millington Historical Survey District" (K-684) is significant for its architecture and heritage related to rural commerce and transportation. Although, many significant historical structures from the Town's early period have been destroyed by fires, significant resources still remain. Millington has many sites and structures of historic importance to Kent County as well as the State Maryland. The MHT asserts that the Millington Historic District is still cohesive ranging from the 18th Century to the early 20th Century.

As shown on Map 9-1, the Millington Historic District encompasses almost the entirety of two streets within the corporate limits of Millington, Sassafras and Cypress Streets. These streets intersect the Town where MD Route 313 (north/south) crosses MD Route 291 (east/west). Portions of Sassafras and Cypress Streets cross Railroad Avenue, Back Street, and Crane Street. A small minority residential community, Sandfield, also is located within the District but not within Millington's corporate boundaries.

There are approximately fifteen (15) key historic structures located within the Millington Historic District, although one site, Gilpin's Mill, is located just outside the District on its boundary. There are approximately 100 more contributing structures with a "fairly narrow range of architectural styles." These mostly date from the 1920's, when the Town was rebuilt after the fire of 1904. Approximately, 20 structures in the District do not contribute to its historical significance. In addition, several historic structures, located within the broader Millington Study Area but not in the District, contribute to the Town's character and identity. These structures are located on farms surrounding the Town, providing its historic setting as a rural community.

Millington Historic Structures: Resource Summary

Gilpin's Mill: 1766 (K-175): Located on the Chester River, Gilpin's Mill is the most significant historic resource located within Millington. The grist mill was constructed in 1766 by Daniel Massey and remained in use for 200 years. Dates of usage are displayed on an old mill stone in the side yard of the house along Sassafras Street. The English bond brick structure is two and one-half stories high, now painted barn red. According to MHT records "...the river bank drops off on the south gable making this elevation a full storey taller."

Gilpin's Mill has a steep gable roof and two main entrances remain. One is located on the center of the west wall facing Sassafras Street and has a batten Dutch door set in a heavy wooden pegged frame. A second entrance is centered on the north gable. Windows are irregularly placed and consist of small square openings with an occasional 6/6 window. Two of these windows provide a view of the wheel and mill race. The wrought iron mill wheel, installed in 1923, is located on the east side of the mill. A two storey hip roof addition was added in the late 19th Century. The interior has one room for each of the four floors. Original wood beams and flooring remain as well as much of the old mill machinery. This includes the mill stones.

Sunset Hall/Howard House: 1787 (K-174): Sunset Hall is an 18th Century building remaining in Millington. The other was the Comegys House, which recently burned. This townhouse style structure was built on a 10 acre lot purchased by Dr. John Thomas in 1787. Located on Cypress Street, the brick house is a two story high building, three bays wide, and two-bays deep. It has a Flemish bond front façade with no belt or water table. It is the most significant architectural structure still standing in the Town today. It also is the oldest within the incorporated portion of Town.

Sunset Hall has a three pane transom light and several period windows, 9/9 on the first floor and 9/6 on the second floor. The structure was remodeled in the 19th Century but boasts handsome and finely crafted interior features including the staircase. However, some of the interior features have been altered or removed over the years. MHT records note that the house stands on a portion of the second 1702 grant for London Bridge. Sunset Hall has been compared to neighboring brick houses in Chestertown, such as the historic Geddes-Piper House, which exhibits some similar features.

Old Brick House/Millington Academy: Circa 1813 (K-318): In 1813, the Trustees of the Academy at Bridgetown (now Millington) purchased a lot on Cypress Street from Thomas Gilpin. The deed was completed in 1836. By that time, a small brick schoolhouse had been constructed on the site. The original Millington Academy, built after 1836, was two stories tall and possessed traits of vernacular Eastern Shore domestic architecture of the late Federal period. It was enlarged from the period 1840 to 1850 but burned in the fire of 1876. The present-day Millington School was constructed on the site around 1915-1916. According to MHT records contained in the original architectural survey, fragments of a much older brick structure make up part of the building. The present brick structure is seven bays long and one room deep. The four west bays have walls laid in Flemish bond on the façade and common bond at the sides and rear, which may date from the late 18th Century. Architecturally the building is significant because of the incorporation of an earlier building. It also is important as an early educational site for Kent County and Millington.

Moffet House: 1830 (K-173): The Moffet House was constructed as a duplex in 1830. A date of construction is painted on a recess near the apex of the east gable. It is a brick structure laid in Flemish bond, whereas bricks have been painted red. The building is a four bay wide, two and one-half story double house, two rooms deep. There is a gable roof with two gabled dormers that were added in the 19th Century. A modern porch was added in the late 20th Century. A double kitchen building is located in the rear, which was originally detached from the house. This has been connected by modern hyphens. Handsome interior trim and moldings are noted in the MHT architectural survey.

Logan House: 1830 (K-170): The Logan House is one of Millington’s most significant historic resources. Located on Cypress Street, it is a two and one-half storey brick building. The front façade is uniform Flemish bond with 9/6 windows on the first floor and 6/6 windows on the second floor. The house has a fanlight transom, which is a rare architectural feature in Kent County for the time period.

The Logan House is considered a “colonial carry-over” and is architecturally important because it reflects a conservative style of construction in Millington. The MHT notes that while new architectural styles were taking hold in Kent County during the mid-19th Century, the Logan House “...exemplifies the survival of an older house form into the a later period, where conservative, straight forward building was favored” over “flamboyance.” According to the MHT, the Logan House is one of the best examples of late Federal dwellings in Kent County.

United Asbury Methodist Church: 1871 (K-624): The United Asbury Methodist Church is located near the crossroads of Cypress and Sassafras Streets. It is a two storey Italianate-Style structure, which is built of brick. According to MHT records, the church “...is quite unlike that of most other Kent County churches built or remodeled during the same period.” It strongly resembles the Presbyterian Church in Middletown, Delaware. Especially notable interior elements include a pressed metal ceiling and cornice, which were installed in 1906. These ceilings were rare for Kent County.

John Wesley United Methodist Church: 1880 (K-622): The John Wesley Methodist Church is located on the north side of MD Route 291 at the eastern edge of Millington. It is a frame one storey structure with a short vestibule tower projecting from the gable end at the southeast corner. The small belfry is enclosed under a pyramidal roof. According to MHT records, the church was likely constructed in 1880 although, it is claimed to be built in 1865. Major remodeling in 1923 and 1964 has made it difficult to determine an exact date of construction. This church is important as a religious and educational institution. The John Wesley Church is one of the County’s oldest black congregations and also housed the first school for black children in the area.

Bottomley Smith House/Pipsozsar House: Circa 1880 to 1885 (K-633): The Bottomley Smith House was constructed in the period from 1880 to 1885 on one of Millington’s deep infill lots between Cypress Street and the Chester River. The house exhibits local vernacular “Victorian Gothic Revival” architecture, which was often used on rural farmhouses in the area during the last quarter of the 19th Century. It is a frame two and one-half storey structure that is five bays wide with a central gable. The building is noted as having fine architectural details. Recent MHT data indicates that sympathetic restoration has been performed.

Sandfield Public School: Circa 1893 (K-621): The Sandfield Public School was burned and destroyed in 2008. The site of the school is located adjacent to Millington, though not within the incorporated Town. It was a simple one room one storey frame schoolhouse structure with a gable roof. Historically, this area has been a small black community located at the fringes of Town. The Sandfield school building was constructed in the late 19th Century and according to MHT records “...strongly resembles the black school erected at Church Land near Pomona in Kent County.” It was converted to a community center and modernized in 1958.

Mallalieu/Simon House: Circa 1900 to 1905 (K-644): According to MHT documentation, the Mallalieu/Simon House is “...one of the most attractive Victorian houses in Millington.” The structure is a two and one-half storey five bay wide building located on the east side of Sassafras Street, in the “Queen Anne” style. The roof is hipped with a flat deck and four cross gables. Dormers flank the building’s south side central gable.

Old Millington Bank/Town Office: Circa 1905 (K-623): The Old Millington Bank Building, now used as the Town Hall, was built after the fire of 1904 ravaged the east-side of Cypress Street. This fire destroyed much of the Town’s existing commercial center, which was located at the crossroads of Cypress and Sassafras Streets and near the railroad line. It is a tall rectangular one storey brick building with two bays. The most notable architectural element of the building is its arched stained glass windows on the front façade. MHT data contends that it is “...the handsomest of all the turn-of-the century bank buildings in the upper county.” Additions have been made to the building over the course of the 20th Century to promote practical use by the Town. However, these additions have not diminished its attractive architectural character or historical value.

Old Gale Store: Circa 1905 (K-643): The Old Gale Store is a vernacular late Victorian style two storey frame and weatherboard structure. It is “T-shaped” in its construction plan with a rare two storey front porch, much like the neighboring Bailey Hotel across the street. The store was constructed in 1905 after a fire destroyed most of the Town’s commercial center. It was used by Leo Gale as a general store and meat market in the early part of the 20th Century.

Chapel of the Holy Cross North Kent Parrish: Circa 1905 to 1906 (K-594): The Chapel of the Holy Cross is located on Sassafras Street. It is a frame one storey “Stick-Style” structure. The plans for the Chapel were provided by W.D. Brinkle, an architect of the Diocese of Delaware, after the previous chapel was destroyed in the fire of 1904. There is a vestibule tower with a steep gabled roof over the entry doors. The nave roof, which is also steeped, intersects with cross gables near the rear corners. The MHT notes that this church’s architecture is known as the “cruciform plan.” The MHT further notes the Chapel of the Holy Cross “...is one the handsomest churches in Kent County and the only one built in the Stick-Style.”

Bailey’s Hotel: 1905 to 1906 (K-638): The Bailey Hotel is located at the crossroads of Cypress and Sassafras Streets. It is a frame three storey tall building with a mansard roof and a bracketed two-storey porch that wraps slightly around the north side. The structure is two bays wide and two bays deep. The north side is four bays deep on all stories.

The hotel is named for its long-time proprietor John E. Bailey and officially named the Central Hotel. It was an especially important building during the railroad age, serving rail passengers traveling along this route. Architecturally, the Bailey Hotel is important because it combines a mansard roof, typical of the French Second Empire Style, with common Victorian elements. This is a late style for Kent County, having been constructed around 1906.

Sunday School of the Trinity Methodist Episcopal Church: Circa 1918 to 1920 (K-642): The Sunday School of the Trinity Methodist Episcopal Church is located on the west-side of Sassafras Street, near the northern edge of Millington. This gable-roofed building was part of the Southern Trinity Methodist Episcopal Church, which was a group that broke away from the main body of the Church in 1845 over slavery issues. The original structure was likely built in the 1870's following the Civil War. The structure was extensively altered and remodeled in the 1950's and is now a private residence.

Regional Historic Structures: Resource Summary

Several significant historic resources are located outside the Town of Millington but within the broader Millington Study Area. These resources contribute to the character of Millington and include the following:

London Bridge Farm: Late 18th Century (K-169): The London Bridge Farm is located just north of Millington on the Millington-Massey Road (MD Route 313). The house is a brick laid in Flemish bond on the front façade and common bond on the sides and rear. It is a two storey three bay structure dating from the last quarter of the 18th Century.

London Bridge Farm is one of the older homes in the Millington area but significant alterations were made to the building in the 1950's. These alterations have changed the essential character of the structure. MHT documentation notes that one room in the house has period raised and beveled paneling on the fireplace wall. However, the house is now a modern dwelling with only some antique elements.

Fellowship Farm: 1860 (K-177): Fellowship Farm, located just outside the municipal boundary of Millington, is a grand Greek Revival and Italianate structure built in 1860 by James R. Jones. It is a significant historical resource. It is a brick building three stories high and five bays wide. It has a low hipped roof surrounded by a balustrade in the central portion. According to MHT records, there is "...handsome bracketed cornice on a deep frieze" with tall windows on the first two stories and shorter windows on the third storey. The building has a central hall plan with one room on each side. The MHT contends that this house "...is the only one of its type in upper Kent County" and "...the only one of brick" that has survived.

Coleman/Thompson Farm: Circa 1860 (K-626): The Coleman Thompson Farmhouse is a two storey five bay frame structure with a low pitched hip roof. The house was constructed in a vernacular Greek-Revival and Italianate-Style. The front porch, one of the building's distinct Italianate features, has been removed and replaced with aluminum or vinyl. Interior trim is largely in the Greek-Revival Style. At one time, a two storey kitchen wing existed but was demolished and replaced with a new kitchen located in the northeast room of the house.

Historic Sites: Resource Summary

Several significant historic resources in the Town of Millington and the Millington area have been lost, being demolished or destroyed by fire. However, these sites are still important from an archeological perspective. These include the following:

Site of the Knock Farmhouse: 18th Century (K-168): The Knock Farmhouse was one of the most architecturally significant structures in the Millington area. It was a three part frame dwelling with a three bay gambrel roof section and a hall-parlor plan. The structure had 9/6 windows on the first floor and 6/6 windows on the second floor. According to MHT records, the house was listed in H. Chandlee Forman's book, *Early Manor Houses of Maryland* (1939) as an architecturally significant building in Kent County of historic value. The structure was the only known example of a gambrel-roof house with a corner chimney in the County. The Knock Farmhouse was torn down in 1956 and a new brick house was constructed on the property.

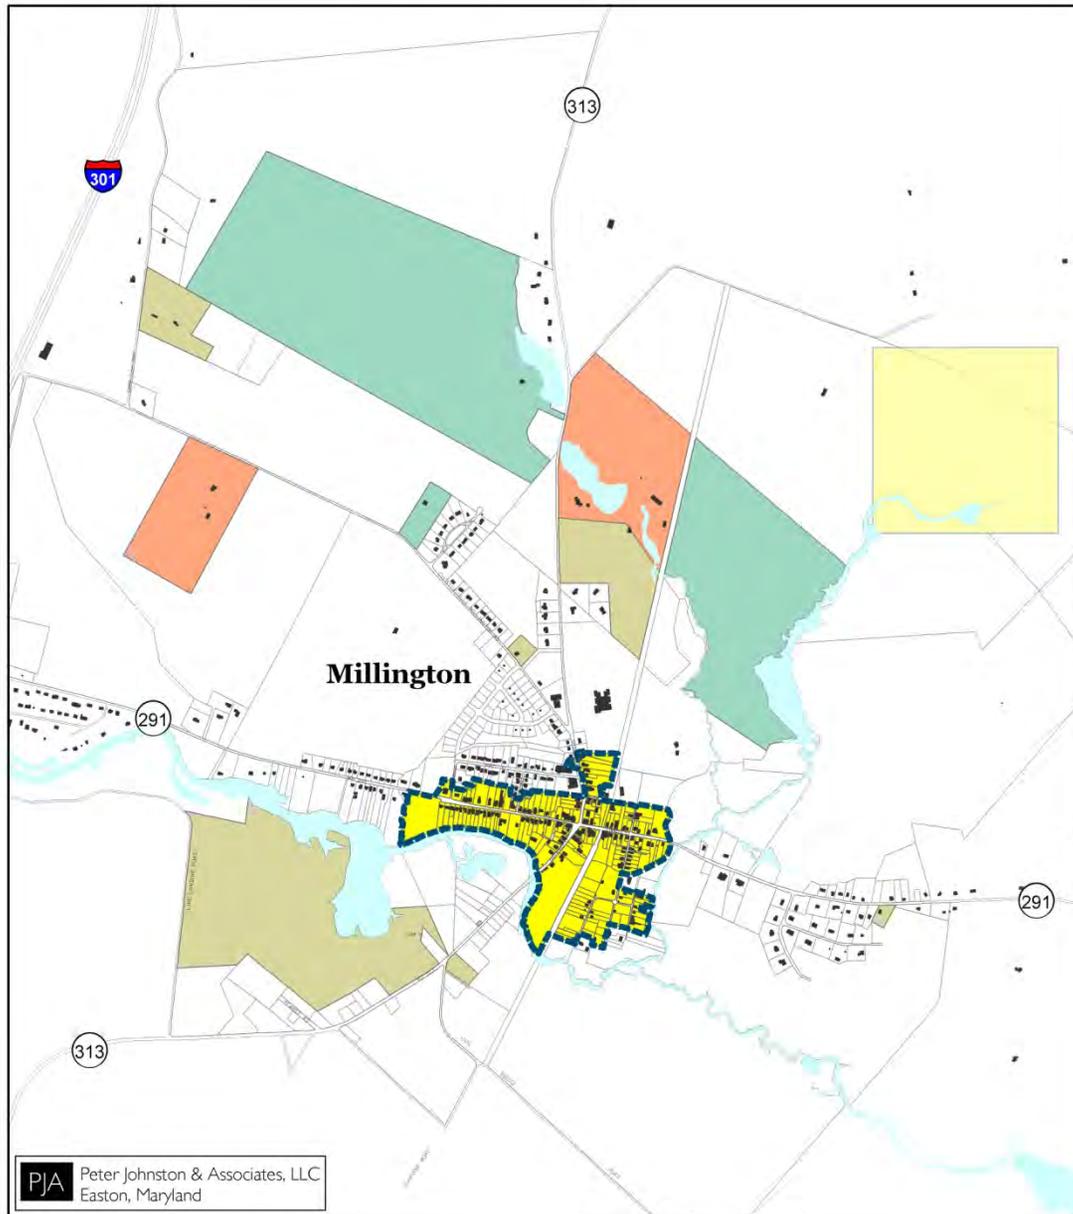

Site of the Comegys House: 1790 (K-171): The Comegys House was one of Millington's most significant historic resources. It was a two part brick building with a Flemish bond front façade and common bond on the sides and rear. The structure was two stories high and five bays long with a gable roof and no dormers. It was enclosed by two chimneys. The taller portion of the house, being more elegant, retained much of its original character. This was marked by 9/6 windows on the first floor and 6/6 windows on the second floor. The house burned in 2002.

Site of the Quaker Meeting House: 1787 (K-648): A lot on Cypress Street in Millington, then known as the Head of Chester, was one of four sites within Kent County on which a Quaker Meeting House was erected. In 1840, the structure was removed due to dwindling membership and religious competition from other sects such as Methodism. Today a modern metal commercial building, constructed in the 1970's, exists on the historic lot. However, the site of the Quaker Meeting House is an important archeological resource from the Town's early history.

Sites of the Peacock House/Grumpelt House: Circa 1830 to 1890 (K-172): The Peacock House was located on Cypress Street. It was originally constructed in the early part of the 19th Century and was modified several times during the course of that Century. The structure was a two-bay brick house, which was later extended to three bays. Its original roof was replaced with a gambrel roof. Brick walls were stuccoed over to provide a masonry effect. According to MHT records, the house burned in the 1980's.

Final Version 05/27/09

HERITAGE PRESERVATION AND TOURISM INITIATIVES

According to the 2006 *Kent County, Maryland Comprehensive Plan*, “the Upper Eastern Shore is one of the oldest working landscapes in North America and one of the last intact colonial and early American landscapes anywhere.”¹ Many heritage preservation initiatives are currently occurring in Kent County and the Millington region. These initiatives present opportunities to capitalize on the history of the Town to promote heritage tourism. More importantly, they represent opportunities to seek public and private investment to restore and rehabilitate heritage structures.

STORIES OF THE CHESAPEAKE HERITAGE AREA

Under the Maryland Heritage Areas Program administered by the Maryland Heritage Areas Authority (MHAA), the Counties of Caroline, Kent, Queen Anne’s, and Talbot have partnered with the Eastern Shore Heritage Incorporated (ESHI – a public private partnership) to create the “Stories of the Chesapeake Heritage Area.” Partners in the Heritage Area also include 21 municipalities within the region. The “Stories of the Chesapeake Heritage Area” is one of the largest in the State.

ESHI is a non-profit organization tasked to manage the Heritage Area and implement a Heritage Area Management Plan. As a guiding policy, the *Stories of the Chesapeake Heritage Area Management Plan* seeks to promote heritage preservation and tourism for economic development. In 2005, the Stories of the Chesapeake Heritage Area became “Certified” by the Maryland Heritage Areas Authority. Certified Heritage Area Status confers many benefits, including grant funding for local projects and historic rehabilitation tax credits for property owners. Millington is part of the Heritage Area

This Plan recognizes the importance of the certification status of the “Stories of the Chesapeake Heritage Area,” comprising heritage sites and places in Kent, Caroline, Queen Anne’s, and Talbot Counties. This status recognizes Millington’s unique heritage and offers the Town the opportunity for coordinated and enhanced tourism activity. Consequently, the *Stories of the Chesapeake Heritage Area Management Plan* is hereby incorporated in the *Millington Comprehensive Plan*, and may be amended from time to time. As adopted on April 4, 2005, “Resolution 2005-06; the Millington Council and Millington Planning Commission” officially adopted “The Stories of the Chesapeake Heritage Area Management Plan”.

HISTORIC PRESERVATION PROGRAMS

A number of programs exist to help individuals and groups temporarily or permanently protect sites and structures considered significant. Historic preservation programs include the inventorying, researching, restoration, and ongoing protection of sites and structures having a significant local or national historic interest. Historic and cultural resource preservation and enhancement through sensitive land use planning and other administrative means would provide Millington with a number of benefits including:

¹ *Kent County Comprehensive Plan*. Prepared by the Kent County Department of Planning & Zoning, Kent County Planning Commission, and Kent County citizens. May 2006. 69

- Promotion of a strong sense of community pride for Town residents.
- Community and economic revitalization through the renovation or adaptive reuse of older structures.
- Increased property values and tax revenues as a result of renovation and restoration.
- Increased revenues generated from heritage tourism.

More detailed information on programs including the National Historic Landmark, National Register of Historic Places, Conservation and Preservation Easements, and Historic Overlay Districts can be found from various historic preservation organizations such as the Maryland Historical Trust.

MARYLAND HISTORICAL TRUST

The Maryland Historical Trust (MHT) is a state agency dedicated to preserving and interpreting the legacy of Maryland's past. The Trust maintains the "Maryland Inventory of Historic properties," a broad-based catalog of historic resources throughout the State. The Inventory consists of written, photographic, cartographic, and other graphic documentation of over 14,000 historic districts, buildings, structures and sites that serve as a physical reminder of Maryland's history. The Inventory is constantly expanding through contributions from the Trust's Statewide Architectural Survey Program, which works with county and local governments and other institutions to identify and document historic resources. Listing in the Inventory does not limit or regulate the property owner in what can or cannot be done with the property.

MARYLAND HISTORIC PRESERVATION EASEMENT

A state-held historic preservation easement monitored by the MHT is an excellent means of perpetually preserving a historical structure and property for future generations. Such easements "run with the land" and transfer to future owners. The benefits for a property owner to donate his land to the MHT include income, estate, inheritance, gifts and property tax benefits. In exchange, the owner gives the MHT the right to review and approve proposed alterations on the property. The MHT will only accept easements on properties it determined to be eligible for listing on the National Register.

NATIONAL REGISTER OF HISTORIC PLACES

In 1966, Congress established the National Register of Historic Places as the Federal Government's official list of properties, including districts, significant in American history and culture. In Maryland, the Register is administered by the Maryland Historical Trust. Some benefits resulting from a listing in the National Register include the following:

- National recognition of the value of historic properties individually and collectively to the Nation.
- Eligibility for Federal tax incentives and other preservation assistance.
- Eligibility for a Maryland income tax benefit for the approved rehabilitation of owner-occupied residential buildings.
- Consideration in the planning for federally and state assisted projects.

- Listing does not interfere with a private property owner's right to alter, manage or dispose of property.

LOCAL HISTORIC DISTRICT OVERLAY ZONE

Another type of designation is the locally-zoned historic district which is an overlay on the existing zoning ordinance of a specified area. This district, legally allowed by Section 8.01 of Article 66B in the Annotated Code of Maryland, is designed to maintain the visual character of the community. It may allow an appointed Commission to monitor changes, alterations and demolition of buildings and structures of architectural or historic significance. The main purpose of such zoning is to:

- Safeguard the heritage of Millington by preserving the areas of the Town that reflect elements of its cultural, social, economic, political or architectural history.
- Stabilize or improve property values in such a District.
- Foster civic beauty.
- Strengthen the local economy.
- Utilize Historic Districts for the education, welfare, and pleasure of the residents of the county or municipal corporation.
- Prevent demolitions and incompatible alterations in a Historic Zone.

KENT COUNTY HISTORIC PRESERVATION AND HERITAGE TOURISM INITIATIVES

The *Kent County Comprehensive Plan* states that the “Kent County Historical Society, the Kent County Historical Trust, and Preservation Incorporated all play a major role in the preservation of the County's resources.” These entities can assist local residents and jurisdictions in the pursuit of heritage preservation. This includes potentially providing assistance to homeowners, who wish to restore historic structures and sites.

The United States National Park Service (NPS) has created the “Chesapeake Bay Gateways Program.” Many sites in Kent County participate in this program. In addition, the *Chesapeake Country National Scenic Byway Corridor Management Plan* and the *Stories of the Chesapeake Heritage Area Management Plan* also promote the preservation and enhancement of Kent County's heritage resources. Primarily, these plans, and the management entities that have been formed to guide planning efforts, focus on both heritage preservation and tourism.

Heritage tourism offers Kent County and its jurisdictions a way to capitalize on the Eastern Shore's unique culture and history. According to the *Kent County Comprehensive Plan*, the County is developing new attractions and improving existing sites as a response to increasing interest in heritage tourism.

HERITAGE PRESERVATION PLANNING

Preserving Millington’s significant heritage resources enhances the Town. In this regard, the setting for such resources also is important. Historic and architecturally significant structures form only one component of the broader character of the Millington area. Working farms, pristine natural areas, Town gateways, and even transportation routes provide the overall context for historic sites and structures. All of these resources combine and contribute to one’s experience of the region.

Most importantly, heritage preservation assists in the promotion of compatible economic development initiatives, which benefit the downtown and the Town’s tax base. The ultimate purpose of heritage planning, from a local government perspective, is to provide enhanced access to federal, State, and local funds to promote heritage preservation and boosts tourism. This includes the general improvement of the Town’s overall aesthetic appearance. Several conceptual and prioritized planning strategies are discussed below for heritage preservation.

FIGURE 9-5: Specialty shops, including this historic building near the Chester River, as well as restaurants and inns provide vital economic stimulus to the Town.

LOCAL HERITAGE PRESERVATION INITIATIVES

Acquire Grant Funding

The Maryland Historical Trust (MHT) provides grant funding for non-capital projects that include planning and outreach for historic preservation. In addition, a host of federal and non-profit foundation funds also are available for planning projects as noted on the MHT website. Millington should consider accessing such grant funding to assist with heritage planning initiatives.

Grant funding also may be available from the Eastern Shore Heritage Incorporated (ESHI) and by extension the Maryland Heritage Areas Authority (MHAA). Kent County and Millington are part of a “Certified Heritage Area” (CHA), the *Stories of the Chesapeake Heritage Area*. CHA status under the MHAA provides increased access to State funding for heritage preservation and tourism projects.

Inventory Heritage Resources

Several important steps exist in the development of an effective program for the protection and promotion of heritage resources. First is to fully inventory the Town’s current heritage resources. This includes updating the existing inventory, such as what structures may have been destroyed or demolished since the last survey. Locations should be mapped and digitized with modern aerial imagery in the Town’s GIS system.

The MHT digital inventory for heritage sites and structures should be integrated with the Maryland Property View (MPV) system. The MPV was developed by the Maryland Department of Planning and Maryland Taxation and Assessments. It provides land use, zoning, property owner and tax information, as well as structural conditions for buildings and is an important tool for heritage planning.

Kent County government, in coordination with heritage preservation partners, is seeking funding to review and update the existing inventory of heritage resources in the County. This includes “...all eligible historic and cultural sites, buildings, communities, land and under-water archeology, landscapes, shorelines, and historic transportation corridors within the County.” This inventory will be posted on the County’s web site.

In addition, the County “...will survey and evaluate all heritage resources including archeological sites and districts; history museums and collections of objects; monuments, structures, buildings and districts; cultural landscapes; and living traditions.” Assistance and guidance will be provided by the Heritage Preservation Advisory Committee. As shown on Map 9-1, several properties, not identified in earlier inventories, have been shown as potential historic sites. The Plan is intended to “...address the current state of heritage resource preservation in Kent County by summarizing past survey and evaluation efforts and identifying known gaps or outdated information.” It also will “...identify known threats for each resource type and contain goals, objectives and a prioritized list of activities for each resource.”

In this regard, Millington should ensure that Town heritage resources are reviewed in this process and inventories are updated.

Designate Landmark Heritage Sites & Structures

The second step involves the designation of the most significant sites and structures, which are critical areas for future preservation because they represent the Town’s most valuable assets. Millington should determine which historic structures in Town should receive local landmark status. These structures are integral parts of the Town’s identity and should be preserved in a state consistent with their historic character.

Develop Heritage Preservation Policies

The third step involves specific policy and regulatory actions to protect heritage resources and build tourism infrastructure in Millington, thus promoting the Town’s economic revitalization. This includes the development of a local Historic Preservation Plan, Historic Preservation Ordinance, and designation of a Historic Preservation Committee to oversee heritage related activities.

A Historic Preservation Plan for Millington provides specific goals, objectives, and recommendations for the preservation of historic sites and structures. The preparation of such a Plan can assist in the inventorying, mapping, and documenting of key resources as well as secondary contributing resources.

It also will provide detailed recommendations for innovative ways to protect these resources, thus establishing the Town’s policies for historic preservation.

According to *Article 66B of the Annotated Code of Maryland* (Planning & Zoning Enabling Act), Sections 8.01 to 8.17, “Historic Area Zoning,” local jurisdictions may designate “...boundaries for sites, structures, or districts, which are deemed to be of historic, archeological, or architectural significance.” Local heritage preservation planning allows property owners in designated historic preservation districts to access significant tax credits, low-interest loans, and grants to repair, restore, and/or renovate important historic properties. In accordance with the provisions of Section 8, local jurisdictions may form a Historic District Commission or Historic Preservation Commission to oversee development within the historic district to ensure compatibility.

The role of historic districts in local development and planning matters is often misunderstood. The ultimate purpose of any “Historic District Ordinance” is to preserve the historic character of a community, promoting compatible development and redevelopment as well as the restoration and/or adaptive reuse of historic structures.

The powers of any historic district and hence any historic district commission are established through a public process and the development of a local Historic Preservation Plan. Therefore the degree of flexibility is established in the initial policies and regulations developed under the Plan. Regulations need not be mandatory and can provide a mix of voluntary regulations.

In Millington a local Historic District can be a voluntary endeavor, whereby each individual property owner can choose whether he or she wishes to be part of a larger officially organized and recognized Historic District. District status can bring numerous benefits to property owners including tax breaks and low interest loans to name a few. For business owners in historic districts, commerce benefits from peripheral marketing by public and private entities involved in heritage tourism promotion.

FIGURE 9-6: This building is an example of adaptive reuse in the Town’s downtown historic area. Modern construction materials and methods were used for the renovated historic structure, providing a pleasing street presence.

Develop Heritage Preservation Regulations

Updating regulatory mechanisms to include the promotion of heritage preservation is encouraged such as the adoption of building maintenance codes, stronger enforcement, and an assessment of the role of the Planning Commission in the Town’s regulatory processes. Administrative enhancements also may be required to provide flexibility, innovation, and incentives.

The adoption of zoning provisions that promote the adaptive reuse of historic structures for public and private uses is important. These include, but are not limited to, bed and breakfast establishments, craft/gift shops, small retail operations, cafes and restaurants, museums, and studio space for artisans, when such uses minimize exterior structural alterations.

It is important to balance historic preservation with energy conservation. Not all historic structures require “museum-like restoration.” In fact, many historic structures serve utilitarian functions, being places for business or worship. Providing a flexible range for use is appropriate. Historic preservation for non-landmark sites and structures should be tempered with the integration of modern and compatible construction methods. Particularly, this includes the integration of energy-saving “green” materials that replicate historic materials. The Town should review the present Zoning Ordinance, as it relates to historic preservation, and develop public guidelines of acceptable “green” construction materials and practices for non-landmark historic structures.

Develop Design Guidelines

Following planning and regulatory preparation, the development of “Design Guidelines” can assist with appearance standards for new development, infill, and redevelopment. Heritage preservation should be balanced with energy conservation, allowing secondary contributing structures to integrate energy efficient building materials that still maintain a historic “look and feel.”

Consider an Enterprise Fund and Tax Incentives

Heritage preservation in Millington is important because historic sites and structures are valuable resources. At the municipal level, Millington should continue to build heritage tourism attractions thereby building the local economy and assisting in the enhancement of existing resources. The architecture of Millington is a commodity and of particular importance. The Town should seek ways to ensure that the architecture found along Millington’s streets is maintained and preserved as a valuable economic asset. An example of enhancing heritage resources is to encourage the protection and rehabilitation of historic homes and buildings by evaluating the use of a “Rehabilitation Tax Incentives” and an “Enterprise Fund.”

One strategy in the *Kent County Comprehensive Plan* is to “...identify the existing tax credit programs available from the State and federal governments, review the requirements of these programs, and explore policies that will enable county residents to take advantage of these programs.” In addition, the County plans to develop education and outreach programs to improve citizen awareness of “...tax credit, grant and loan programs for restoring historic buildings and provide information on the proper maintenance and repair of historic buildings.” A clearinghouse of available resources will be provided.

In this regard, Kent County can assist Millington residents to access funding assistance for heritage preservation. Funding initiatives also include working with the Maryland Department of Housing and Community Development, the Maryland Historical Trust, the Maryland Heritage Areas Authority, and the National Trust for Historic Preservation to obtain financial support for heritage preservation and planning.

An Enterprise Fund can be established and paid for by new development or public/private partnerships. Enterprise funds promote improvements to the Town, such as new street lights, sidewalks, street trees etc. These could include improvements to the Town's Historic Core. An Enterprise Fund also can be used by the Town to provide low interest loans to homeowners and business owners for necessary property and infrastructure improvements, such as restoration, renovation for adaptive reuse, or sidewalks etc. In combination with Historic Tax Credits, available from the MHT, an Enterprise Fund can provide an effective mechanism for revitalization.

Specific Infrastructure Enhancements

Millington should continue improving the Town's infrastructure in the Historic Core to promote a walkable and compact community. This includes street trees, sidewalks, period street lighting, greenways, and open space/parks. Although, much has been done by Town officials and local residents already, the continuing goal is to improve the overall aesthetic appearance of Millington and enhance tourism to revitalize the Town.

REGIONAL HERITAGE PRESERVATION INITIATIVES

Work with Neighboring Jurisdictions

Millington should work with neighboring municipalities, Kent County, and the State of Maryland to explore ways to assist heritage preservation, neighborhood revitalization, and tourism efforts in the Town and the region. Partnerships create an "economies of scale" and allow for enhanced assistance. This is particularly important for property owners that may require assistance accessing State grants, loans, and tax credits for historic restoration/rehabilitation. A "go-to person" is needed for technical and professional assistance regarding heritage resources, including assistance to property owners.

Other partners include private and quasi-public entities such as local and regional businesses, the Kent County Historical Society, Washington College, and the Eastern Shore Heritage Incorporated. The Kent County Comprehensive Plan states that "...preserving landscapes can be as important as preserving structures" and the "...National Register of Historic Places allows for the designation of rural historic districts." These rural historic districts include large tracts of agricultural land "...surrounding small crossroads communities that are important to preserving the cultural heritage of Kent County."

Millington should work closely with Kent County to ensure that Town interests in regards to heritage preservation are protected. This includes the coordination of Town Growth Areas and proposed new development.

Access Regional Heritage Initiatives

Regional heritage initiatives will assist Millington and the region to maximize access to State funds for heritage related initiatives, including funding through the MHAA. A Heritage Area Management Plan has been prepared for Kent County. It unites resources, linkages, and the potential for heritage tourism and economic development. Millington is part of the *Stories of the Chesapeake “Certified” Heritage Area*, which is administered by the Eastern Shore Heritage Incorporated (ESHI). Annual funding is provided by the MHAA.

In addition, Millington should work with regional entities to establish potential routes for a “Scenic Byway” in the region or a byway branch that can link to the existing Chesapeake Country Scenic Byway, along MD Route 213. Branch links can be made from Galena, a Town along the Chesapeake Country Byway, to Massey and then Millington along MD Route 313. Scenic byways are funded through the Maryland State Highway Administration with assistance from Maryland Tourism.

Kent County has indicated that “...interpreting the county’s history through guided tours and demonstrations would allow residents and visitors to truly experience what make this area so special.” This includes encouraging local historic preservation groups to explore alternatives for promoting regional heritage tourism and the history and culture of Kent County. Cross promotion for heritage tourism could be an important tool for the Town’s economic development and enhancement.

Chapter 10 Transportation

Efficient and effective movement of people and goods is an important concern in any community's growth plan. Providing a safe and efficient transportation network with minimal disruption of the area can sometimes be difficult to achieve. It requires that transportation planning be closely coordinated with other elements of the Comprehensive Plan to assure that transportation plans and policies complement and support those of other sections. As the control of transportation systems is divided among the State, the County, and the Town of Millington, managing transportation facilities to ensure adequate capacity will require coordination and cooperation among the various levels of government.

EXISTING TRANSPORTATION FACILITIES

HIGHWAYS

The 3.19 miles of Town street systems include State highways, County roads, and Town streets. Millington is served by two State highways. Primary highway access to Millington is provided by MD Route 291, MD Route 313, and (to a lesser extent) the Chesterville Millington Road. MD 313 and 291 are both State-maintained. They are two-lane highways that intersect in the approximate center of Millington. MD 313 is a north-south route and connects Millington to Sudlersville in Queen Anne's County, to the south, and Massey in Kent County, to the north. MD 291 travels west to east and is the principal route used to travel from Chestertown to Dover, Delaware. It intersects with US Route 301 a few miles west of the Town.

In 2007, the Maryland State Highway Administration (SHA) posted an average daily traffic count of 2,622 vehicles on MD 291 at a point four-tenths of a mile west of the 291/313 intersection in Millington (down slightly from the count in 2004), and 2,132 vehicles on MD 291 at a point one-tenth of a mile west of Peacock Corner Road (up slightly from the 2004 count). SHA posted a 2007 average daily traffic count of 1,742 vehicles on MD 313 at a point two-tenths of a mile north of its intersection with MD 291, down slightly from the 2004 count, and 2,880 vehicles, an increase since 2004, at a point in the southern end of Town, below the Chester River.

These average daily traffic counts indicate that local roads are currently operating at an acceptable level of service (LOS). Average daily traffic volumes at this level indicate these roads are currently operating at LOS C or better.

A new overpass with roundabouts at the intersection of MD 291 and US 301 was completed in 1999. Delaware plans on dualizing 301 along its full length in the State. This improvement will ease access to Millington from the north and, according to the Maryland State Highway Administration, will increase current truck traffic along US 301 by providing an alternate route to I-95. The average daily traffic just north of the MD 291/MD 301 interchange was reported to be 11,101 in 2007.¹

¹ Source: Maryland Department of Transportation, State Highway Administration, Highway Information Services Division

LOCAL STREETS

Local residential traffic is handled by Town-maintained streets, which form grids off MD 313 and 291. In Town, MD 313 becomes Sassafras Street and MD 291 becomes Cypress Street. Both streets are two-lane, feature parking at one or both curbs, and allow unrestricted access from driveways and private entrances. The remainder of the municipal street system includes School Street, Hurtt Avenue, Comegys Street, Back Street, Hazel Lane, Railroad Avenue, and Crane Street. All are maintained by the Town and feature 50-foot right-of-ways, two lanes, parking on both sides, and unrestricted access from driveways. Streets in nearby Sandfield include Middle, West and Race Streets, all of which are County-owned and maintained.

PUBLIC & PRIVATE TRANSPORTATION SERVICES

Millington is served by the Maryland Upper Shore Transit (MUST) a collaborative effort between Delmarva Community Transit and Queen Anne's County, County Ride serving Kent, Caroline, Queen Anne's, Dorchester and Wicomico counties with fixed route bus service. MUST provides fixed route service with special services for persons unable to use the regional fixed routes. Fares range from \$2.00 for the general public to \$1.00 for seniors and persons with disabilities. Transit Route 2 includes regular stops at Chestertown, Crumpton and Sudlersville. Service to Millington is on demand. Riders are picked up at the Moose Lodge and Millington Food Rite.

Several public and private companies also provide transportation service in the county. These include special needs transportation, cab service, shuttle service to nearby airports and train stations, and van service to large regional employers and locations west of the Chesapeake Bay.

PEDESTRIAN SYSTEMS

Millington has nearly 2 miles of sidewalks throughout the Town. Sidewalks have been installed along the main streets within the Town (Cypress and Sassafras Streets) and along some minor streets (Rail Road Avenue and Sharp Street). The Town plans to add sidewalks along Hurtt Street.

TRANSPORTATION PLAN

Millington's primary objectives for the local transportation system are to integrate land use and the street and highway networks to provide for the logical continuation and improvement of existing streets and highways in proper coordination with the State, County, and municipal facilities in existence.

In existing neighborhoods, Town officials want to minimize the adverse effects of vehicular traffic on local residential streets, particularly truck traffic. Considering the Town has limited funds for street and sidewalk improvements they want to maximize the capacity, safety, and efficiency of the existing street and highway system. Enhancing quality of life for existing and new residents is dependent not only on safe and efficient streets but also on appropriate pedestrian and bicycle routes that link residences with activity centers, including shopping, recreation and civic space. The Town wants to improve pedestrian safety by providing safe routes for pedestrians and non-motorized transport.

The Town's "Transportation Plan" concept is illustrated on the Transportation Plan Map. The Millington Transportation Plan consists of a local street hierarchy (in addition to the State and County systems). It is made-up of three (3) street types that include:

- 1) Collector Streets – The Town envisions a collector street system that will connect to the existing Town street system, link neighborhoods and serve as the primary circulation routes throughout the community. Direct access on major collectors should be strictly limited to the intersections of other major streets, roads and local streets. Design features, such as street lighting, signage and street tree plantings should distinguish the collector streets from lower order streets. Pedestrian and separated bicycle routes should be provided along these routes.
- 2) Local Streets – Local streets, primarily serving residential properties, will make up the bulk of the Town street system. Local street standards may vary, depending on the number of units served, but the essential characteristics of these streets will be the same. Local street design should emphasize low vehicle speeds and pedestrian safety, pedestrian scaled design (e.g., street lighting, signage), and appearance. All local streets should be identifiable by distinct street trees.
- 3) Alleys – Alleys provide access to the rear of properties where off-street parking and/or garages are located. Alleys present an opportunity for a more positive front yard streetscape by eliminating the need for curb cuts and by providing an alternative location for utilities and trash pick-up.

The Transportation Plan also includes a primary stem of a trail system. When connected to existing and new sidewalks as well as pedestrian and separated bicycle routes along the collector street systems the overall pedestrian system will provide access from neighborhoods to activity centers.

TRANSPORTATION POLICIES

A small community like Millington has difficulty accommodating all the needs of the users on its roads. Since Millington serves as a major connecting area for busy State highways and also as a residential area, conflicts are inevitable. These conflicts will increase as growth occurs in the region, and certainly if substantial development occurs within the Town or nearby.

Improvements are needed to the circulation system to protect pedestrians and property as well as prepare for the increased use of our roads by others. The Town must work with Kent and Queen Anne's Counties, the State Highway Administration, and the Mass Transit Administration to make sure its needs are understood, all proposals are coordinated, and service providers such as Maryland Upper Shore Transit are supported

Action strategies outlined in the 2007 Millington Comprehensive Plan remain valid in this update. They include:

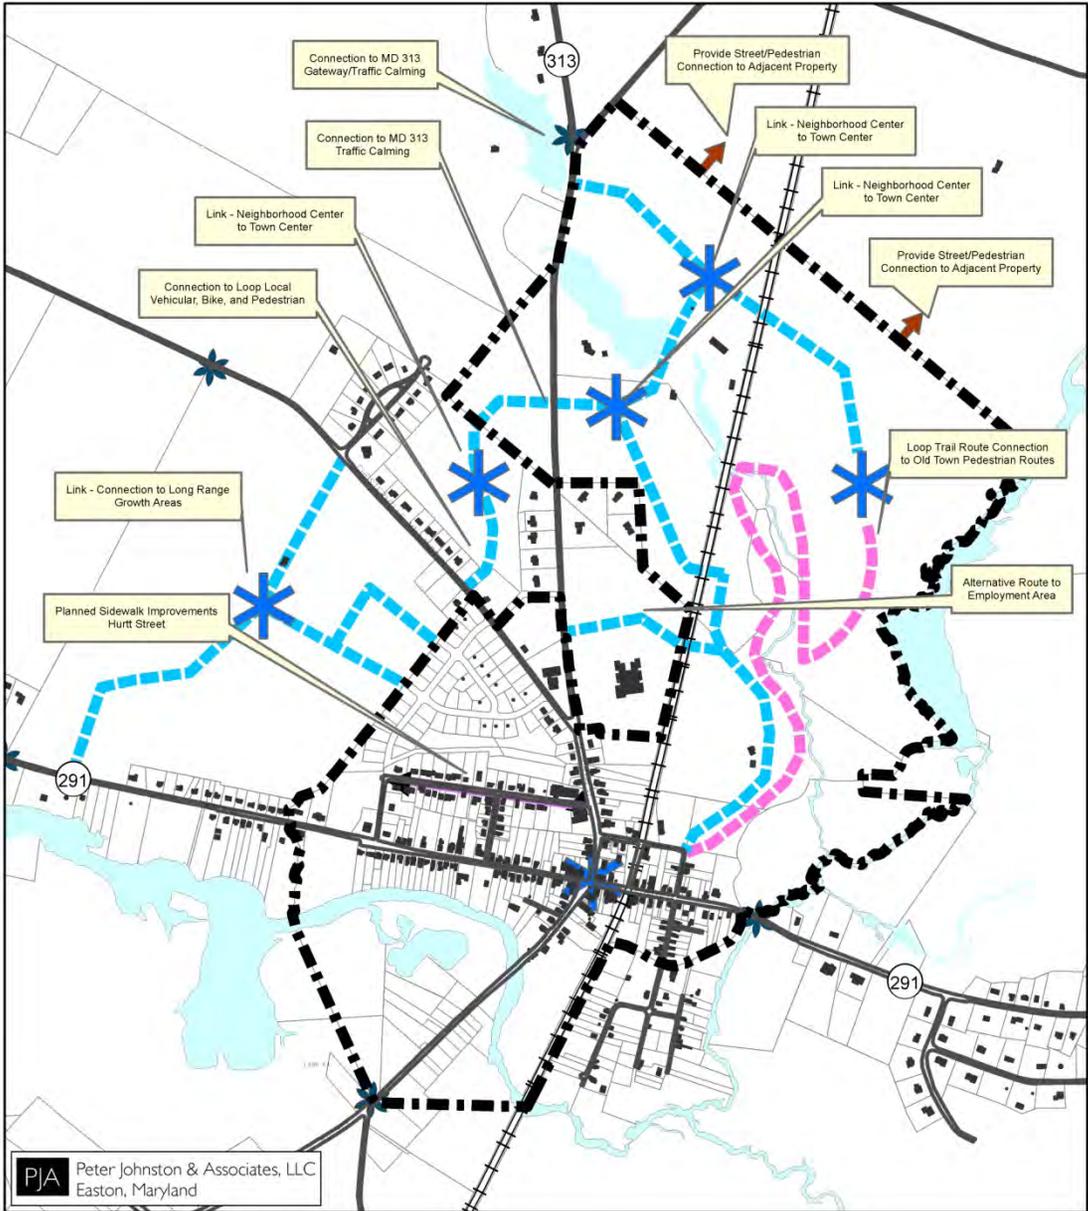

- Continue the grid pattern of town streets in any future developments and discourage any dead-end arrangements. Ensure that any modifications to existing streets are carried out in a grid or network that produces alternate routes to every destination.
- Identify the opportunities to expand and extend the internal system of walkways and bikeways throughout the town and design a program to reserve land for future walkways and bikeways in new developments and ensure their connection with planned overall circulation systems.
- Identify and establish resting areas for pedestrians and bicyclists, e.g. benches, flower gardens, or fountains, in important activity areas.
- Develop a multi-year plan to repair, replace, and construct sidewalks in areas of identified need.

To achieve their transportation objectives the Town has established the following policies for transportation facilities and services:

1. Millington endorses alternatives to driving alone and encourages the County and State to inform the public and private entities of the monetary and environmental costs of continued dependence on automobiles.
2. Millington encourages the County to establish a program for commuters including park and ride facilities at appropriate locations.
3. The Town will support bicyclists and pedestrians by providing safe, convenient, and inviting routes and walkways between activity centers.
4. The Town will strive to develop a pedestrian friendly street system within the corporate limits.
5. The Town will establish street design standards for new development that will contribute to reaching the transportation and land use goals of the area, provide safe and efficient mobility for all people, and contribute to the quality of life and civic identity in the area.
6. The Town will work with the State and County to coordinate the land use and transportation elements of the Comprehensive Plan with adjacent jurisdictions in order to achieve a reduction in drive alone rates.
7. New collector and local streets will be built by developers according to the Town standards and specifications and in accordance with concepts shown in the Town's Transportation Plan.
8. The layout of new street connections in undeveloped areas will assure connectivity to the overall Town street system.
9. Adequate rights-of-way will be required for new and planned streets taking into account existing and future development.
10. All developments will have adequate access and circulation for public service vehicles but actual paved street sections should be as narrow as feasible to maintain a human scale.

SUMMARY

The Town should require the design for any development on the Wickes property to adhere to the concepts illustrated on Map 10-1. This includes:

Access to Employment Area

Of particular importance to the Town is reducing the impact of local and through truck traffic on local streets. Providing an alternative route to the planned employment area should be a priority that is addressed when development proposed on the Wickes property. The Town should work with County officials and the developer of the Wickes property to secure access from MD 313 to the employment area.

Traffic Calming

MD 313 along the Wickes property will function as a Town street in the future as opposed to a State collector route. It is important that motorists are alerted to the change in road function at the northern gateway to the Town. Traffic calming measures can be applied here to reduce vehicular speeds to at least 30 mile per hour. An intersection at the access point to the portion of the Wickes property west of MD 313 presents another possible location of installation of traffic calming measures.

Connectivity

The overall design of the street system for the Wickes property should create a loop system that allows for multiple links back to the existing Town street system. Of particular importance is ensuring a loop back link west of MD 313 through the “growth area”. In addition, provisions should be made for street and/or pedestrian extensions to the north (to Speer Road). Right-of-way reservations should be required at appropriate locations.

Pedestrians and Bicyclists

Like the street system, pedestrian and bike ways need to be included along all collector routes. Sidewalk and bike lanes should be supplemented with an extensive recreational trail system.

Chapter 11 Implementation

The Millington Comprehensive Plan is intended to help the Town achieve its vision for the future. It provides a policy base for a wide variety of public and private actions and development related decisions by both public officials and private landowners. It provides general guidelines to the local community in order that piecemeal improvements or day-to-day decisions can be properly evaluated against their long-range impact upon the community and their relationship to existing settlement patterns.

The Millington Comprehensive Plan, and in particular the Land Use Element indicates the proposed general or conceptual development pattern of the community expected through 2030. It is not a detailed blueprint. It is, however, a guide delineating patterns of development which permit orderly and economical growth of the community in a manner that can be more efficiently served with a variety of governmental services and facilities.

The following sections outline strategies the Town can follow to implement the recommendations of this Comprehensive Plan.

DEVELOPMENT STANDARDS

Development codes and regulations should be consistent with the recommendations of this Comprehensive Plan, including promoting place-making through good design practices. Currently, these regulations are an impediment to the effective implementation of the policies expressed in this Comprehensive Plan. Significant attention and activity should be devoted to the review and update of Millington's land use regulations.

ZONING ORDINANCE

The Millington Zoning Ordinance will need to be thoroughly reviewed and revised to implement the recommendations of this Comprehensive Plan. Among other changes, the following revisions are required:

Zoning Districts

New zoning provisions should be created to implement the Land Use Plan recommendations, including creation of zoning district standards for the following districts:

Town Center Mixed Use District – a district with flexible development standards that permits a broad range of commercial, business and service uses as well as multi-family residential above the first floor. Architectural and site design standards and guidelines for this planning area should be included.

Old Town Residential District – a detached single family residential district that encourages appropriate infill and redevelopment, includes appearance standards to protect existing historic structures, and strictly limits conversion of single family to multi-family residential use.

Suburban Residential District – a detached single family residential district that encourages appropriate infill and redevelopment and strictly limits conversion of single family to multi-family residential use.

Rural Residential District – a detached single family residential district that limits development to low density single family residential uses consistent with the abundant natural resources and sensitive environmental features found in this area.

Employment District – a mixed-employment district that permits a broad range of light industrial, business and service uses with some limited commercial permitted where the district adjoins the Town Center if included in an approved master development plan. This district should include incentives for development as a planned business park.

Planned Unit Development (PUD) District – a floating zone option that includes incentives for creation of master planned communities. This option would apply to large parcels of land, including annexed tracts, and would require design that includes a mix of residential unit types.

Conservation District – a natural resource protection overlay zone that includes sensitive environmental features areas including forests and FIDS habitat, wetlands, streams and buffers. The district should be used to implement the Town’s no net forest loss policy. Within the district only low intensity uses (including very low density residential use) that maintain the forest cover and protect sensitive environmental features will be permitted. Non-contiguous density transfer is allowed for properties under single ownership. Strictly enforcing protection standards applicable to the Critical Area will protect

OFFICIAL ZONING MAP

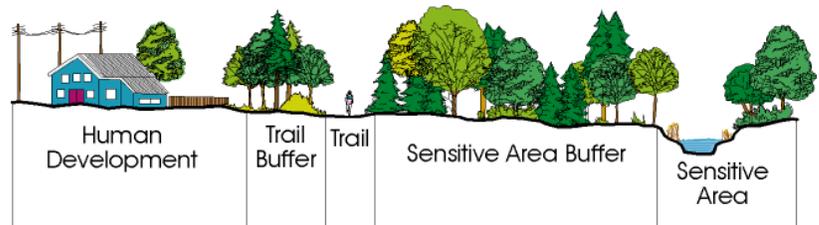

The Town’s Official Zoning Map should be updated to reflect current corporate boundaries. The Official Zoning Map also should be updated to reflect the policy direction of this Comprehensive Plan, following review and updates to the Zoning Ordinance.

INFILL & REDEVELOPMENT INCENTIVES - HEIGHT AREA AND BULK REQUIREMENTS

Zoning standards for such things as minimum lot size, building setbacks and maximum height should be examined to ensure they are not an impediment to appropriate infill and redevelopment. Special infill zoning provisions that create incentives for context-sensitive infill and redevelopment should be included in the Zoning Ordinance. This will ensure that property owners of existing buildings rebuilding on small lots can be given the flexibility needed to accomplish infill and redevelopment.

SENSITIVE AREAS PROTECTION STANDARDS

The Town's emphasis on protecting natural resources supports a proactive approach to managing sensitive environmental features. The following protection standards should be added to the Zoning Ordinance to achieve the Town's objectives in this regard:

- Require stream buffers of at least 100-foot wide naturally-vegetated areas on either side of streams wherever possible. Where this buffer adjoins sensitive soils (e.g., hydric soils) it should be expanded.
- Adopt additional standards to protect identified Forest Interior Dwelling Species (FIDS) habitat. This may include adoption of a natural resource protection overlay zone that strictly limits clearing of forest cover and only permits very low density residential development (e.g. one dwelling unit per 25 acres).

In addition, the Town should continue to work with Kent and Queen Anne's Counties to identify strategies in local Hazard Mitigation Plans to address flooding and flood-related issues. These strategies can include elevated structures, tank anchoring, and other such measures. It should be noted that the County and Town have successfully purchased many properties in the flood zone subject to reoccurring flooding. This program serves to further the Town's goals for improving environmental functioning and water quality and should be continued.

The Maryland Chesapeake Bay Critical Area Commission is in the process of updating specific policy and regulatory aspects of the Critical Area Program. This includes new digital Geographic Information Systems (GIS) mapping for Critical Area boundaries in the State as well as updates to the State Critical Area law, some of which passed in the recent Maryland legislative session. Following adoption of the Comprehensive Plan, Millington should consider thoroughly reviewing and updating its Critical Area Program and Ordinance with assistance from the Commission and the Critical Area Program Office

LANDSCAPE STANDARDS

The Town's landscape objective is to ensure that landscaping is used to accentuate the natural and built environment, establish visual connectivity, enhance community identity, and provide environmental and public health benefits. Landscaping should be used to effectively delineate space, highlight focal points, and provide buffer and transitional elements in addition to providing shade.

Millington should revise its development codes to establish appropriate landscape performance standards. Minimum landscape standards should be established for all land uses and include bufferyard standards between zoning districts of conflicting intensity, parking lot and perimeter landscape standards, street tree requirements, and special landscape treatment at gateway locations.

CRITICAL AREA STANDARDS

In May 2008, the Critical Areas Commission passed legislation to amend the Critical Area Law in Maryland. The provisions of House Bill 1253 generally take effect on July 1, 2008 and are applicable regardless of whether a county, city, or town government has amended its Critical Area program, ordinance, plan or regulations. There are specific grandfathering provisions that relate to many aspects of HB 1253 that will allow flexibility for certain projects that have been formally submitted to a local government for review prior to July 1, 2008. The Millington Zoning Ordinance will need to be amended to reflect these changes in the Critical Area law.

Under the new legislation, newly subdivided lots in the Resource Conservation Area (RCA) and lots with changes in land use in the RCA (i.e. from residential to commercial) are subject to the new minimum Critical Area buffer of 200 feet. The minimum 200-foot buffer will be applied to the 'parent' parcel as well as any lots that are subdivided off of the parent parcel. Properties that change their boundaries by way of a Boundary Line Adjustment Plat (BLAP), but do not create additional lots, will not have their minimum buffer width expanded.¹ In order for Millington to authorize a reduction in buffer width, the Town must first have any proposed alternative reduction provisions approved by the Critical Area Commission.

Other changes required to achieve consistency with the law include replacing "impervious surface" requirements with "lot coverage" requirements. Lot coverage is defined to include areas covered by a structure, accessory structure, parking area, driveway, walkway, or roadway. Gravel, stone, shell, impermeable decking, pavers, permeable pavement, and any other man-made materials are included in lot coverage calculations. Lot coverage does not include walkways and stairs in the buffer, a wood mulch pathway, or decks with gaps to allow water to pass freely.

Millington must establish an administrative enforcement program or procedures of at least equal strength to address violations. Under the new law, a contractor, property owner or any other person who commits, assists, authorizes, or participates in a violation is subject to penalties. Enforcement and penalty provisions must include the following:

- Each violation is considered a separate offense and a fine of up to \$10,000 may be assessed.
- Each calendar day that a violation continues is a separate offense and a fine may accrue at \$10,000 per day that the violation continues.

¹ Reference House Bill 1253 Page 44, lines 12-19 and page 44, lines 26-28.

- Payment of all penalties and guarantee of restoration will be required prior to issuance of any permit, approval, variance, or special exception.
- Environmental impacts and costs of site restoration and inspections must be considered in determining a penalty.
- There will be a three-year statute of limitations to take enforcement action.
- Millington officials have the right to enter a property if a violation is reasonably suspected, and if entry is refused, may seek a court injunction.
- Prosecution of violators may include jail time up to 90 days.

SUBDIVISION REGULATIONS

Millington should review its Subdivision Regulations to ensure that its provisions are consistent with the objectives outlined in this Comprehensive Plan. Among other things, the Town should review development standards for roads and streets to ensure that new impervious surfaces are minimized, consistent with the policy objectives of this Comprehensive Plan. In addition, traffic calming measures are important, particularly for residential neighborhoods. Traffic calming measures should be a basic design requirement. An essential part of the Subdivision Regulations should be that the owners and developers of all new subdivisions be required to post surety for the proper and timely construction of all water and sewer systems, fire protection systems, all roads and sidewalks, and all other necessary and required improvements. Surety also should be posted for the appropriate completion of any other public feature or amenity that might be proposed by developers. This might include such things as recreational facilities, community halls, street lighting, and street furniture.

COMMUNITY DESIGN

Facing the prospect of significant growth, Millington is understandably concerned about the impacts of growth on the existing community character. Planning policies addressing “community character” must attempt to translate a rather broad and sometimes vague term into more specific public guidance.

In an article entitled *Great Neighborhoods: Places that Stand-Out for their Character, Livability, and Positive Community Feeling*², a survey was conducted to determine the characteristics of “a great neighborhood.” Respondents cited the following identifiers:

FIGURE 11-1: Architecture is an important component of a Town's character.

² American Planning Association *Planning Magazine*, January 2008

1. Has a variety of functional attributes that contribute to a resident’s day-to-day living (residential, commercial, mixed uses);
2. Accommodates multi-modal transportation (pedestrian, bicyclists, drivers);
3. Has design and architectural features that are visually interesting;
4. Encourages human contact and social activities;
5. Promotes community involvement and maintains a secure environment;
6. Promotes sustainability and responds to climactic demands; and
7. Has a memorable character.

Protecting and enhancing these qualities in Millington is an objective of the 2007 Millington Comprehensive Plan. The concepts embodied in “place making” as guiding principles for a community are consistent with and reflective of these public sentiments. Because the scale of new development in the Town will strongly influence the look and feel of Millington tomorrow, establishing guidance for development design is important.

DESIGN GUIDELINES - PLACE MAKING PRINCIPLES

Millington favors well-planned projects that relate well to the surroundings. Instead of subdivisions the Town will encourage projects that result in new neighborhoods that fully integrate into the existing Town’s physical and social fabric. In order to achieve this end, the Town will judge the quality of new development based on the follow place-making principles listed below:

BEFORE

View of existing firehouse parking lot and open space from the north

AFTER

Street trees, sidewalks, and storefronts create an inviting downtown-like atmosphere as well as visual interest and sense

FIGURE 11-2: Good design emanates from sound “place-making” principles. As shown in this illustration from the Kennedyville Village Plan, build-to lines, brick sidewalks, street trees, and street furniture can add to the aesthetic dimension of a streetscape.

Character - Place making should respond to the existing natural and developed features of the environmental context. A place that enhances the distinctive local landscape, and sense of place and history while providing a quality living environment will establish a rich environmental character unique to its locality.

Continuity and enclosure - The form and fabric of a place define the living environment and establish a hierarchy of both public and private spaces providing clarity of function and movement.

Quality of the public realm - Good urban design provides a sense of well being and amenity by ensuring recognition of the natural context and the functional requirements of the community and responding with public spaces and routes that are lively and pleasant to use.

Ease of movement - Ease of movement for residents and visitors is reinforced by consideration of connectivity and permeability and provides for a community, which is easy to “get to and to move about in.”

Legibility - Legibility principles establish an understanding of place and wayfinding for residents and visitors. A discernable planned structure ensures that the living environment has a clear image and is easy to understand.

Adaptability - Provision for changing lifestyles and community needs enhances the future social and economic sustainability of a community. Adaptable space provides for flexible uses, gradual change, buildings and areas adaptable to a variety of present and future uses, and reuse of historic buildings and spaces.

Diversity - Diversity of space and function provides a range of experience and choice. This can be achieved through a variety of functions and land use, provision for a broad cross section of community and cultural values, a variety of built forms and development character, and opportunities for biodiversity.

The following general guidance further clarifies the Town’s expectation for the design of new neighborhoods:

- Natural features and site constraints should suggest natural common-sense design solutions. This includes designing with nature, not fighting, controlling, or dominating natural and ecological processes;
- The automobile should not be the dominant force that dictates the layout and design of residential communities. New residential streets should be as narrow as possible to discourage fast moving through traffic, be well-landscaped with shade trees, and be recognized as the principal public spaces that they are. In view of their visual and functional importance, thought, deliberation, and investment in landscape and streetscape design should be evident;

- Substantial landscaping should be included in common open spaces. Landscaping should provide shade, shelter from wind, and visual screens or buffers from unsightly elements on adjoining properties such as parking lots, loading areas, dumpsters, or utility structures. Landscaping can also provide wildlife habitat and linkages to forested and natural areas, greenways, and walking paths;
- Parking should not be a dominant site feature. Parking areas should be small scale, highly landscaped, attractive and inviting. Whenever possible, it is better to give preference to green space over asphalt and paved parking. This also assists in achieving water quality objectives;
- Signage should be informative without being intrusive. Signs should not dominate the visual landscape. Signs should be compatible with their purpose, be clear, concise, and as small as reasonably possible; aesthetics
- The architecture and styles proposed should be in keeping with the best building types and styles that have evolved in the Millington region, albeit taking advantage of new building material and techniques associated with “green building”. The Town should strongly encourage traditional designs and materials so that new developments blend seamlessly with the old. Modern materials and layouts need not conflict with the character of Millington, if developers and builders are sensitive to the overall appearance of their creation; and
- The views of a site and from a site should be clearly considered by developers and addressed.

Large-scale development projects should be designed to achieve the following characteristics:

- Architectural harmony, including compatibility in styles, materials, colors, and building size and setbacks;
- Variety in housing types, density, and cost;
- Parks, squares, and other common open spaces for residents to interact and recreate, and to provide a setting for the architecture of the development;
- Neighborhood centers and civic spaces, which, depending on the scale of the development, can include places to shop, work, learn, or worship;
- An interconnected street system, which is based on a modified grid system;
- Sidewalks, street trees, and substantial on-street parking, providing distinct separation between pedestrians and traffic;
- Streets and sidewalks that are spatially defined by buildings in a regular pattern, unbroken by parking lots;
- Traffic calming, including more narrow streets with shorter turning radii than suburban streets, and medians, circles and related features along prominent streets;
- Lighting which is designed for safe walking and signage which has a pedestrian orientation; and
- A system of land subdivision and development which links one neighborhood to another and can logically be extended.

TRANSPORTATION

The layout of access and circulation systems in new developments must balance the mobility, safety and other needs of pedestrians, bicyclists, and vehicular traffic. Achieving this end requires more than simply complying with street standards and specifications. Successful design of access, circulation and parking systems in new developments requires considerable effort.

Streets may be the most important public spaces in neighborhoods and must be thought of as an integral part of the overall design of communities. Interconnected streets encourage people to walk by providing a variety of route options. Small blocks encourage people to walk by maintaining a human scale environment. A fine-grained system of streets, pedestrian ways and bicycle routes helps disperse traffic and reduce congestion. Multiple streets provide opportunities to connect new neighborhoods with old neighborhoods. Pedestrian walkways, bicycle lanes, and other amenities enhance the desirability of walking and bicycling.

New development design should be based on a modified grid system consisting of a simple and logical hierarchy of streets that contributes to the sense of place and helps orient people. Every lot should be afforded a reasonable means of ingress and egress for emergency vehicles as well as for all those likely to need or desire access to the property in its intended use. No direct driveway access should be provided onto an existing or planned major collector street from a residential lot. Vehicles should be able to enter and exit without posing any substantial danger to themselves, pedestrians, or vehicles traveling on abutting streets, or interfering with the free and convenient flow of traffic on abutting or surrounding streets.

Alleys provide opportunities for parking in the rear of housing and contribute to the overall permeability of the road network. Alleys should be considered for all residential neighborhoods and as access to rear parking areas in commercial and office areas.

The street layout should present an attractive streetscape. A streetscape that is interesting to pedestrians encourages more people to walk. Buildings should front on the street. Structures, whether residential, commercial, or office, should form a continuous street edge, a vertical wall that contains the street and encloses space. In this regard, most streets need to be designed so that they are usable and frontable. The street layout should permit the safe, efficient, and orderly movement of traffic while meeting the multi-faceted needs of drivers, pedestrians and bicyclists. Street rights-of-way should be adequate to serve all functions including carrying motor vehicle, bicycle and pedestrian traffic, and allowing on-street parking.

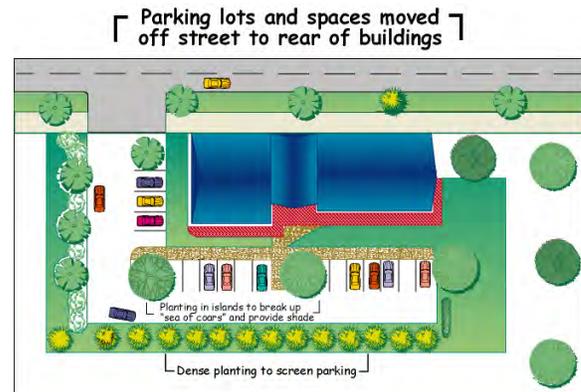

FIGURE 11-3: Parking and utilities should be located in the rear of the building, whether commercial or residential, to present the building façade to the street.

Streets should connect with surrounding streets to permit the convenient movement of traffic between neighborhoods or to facilitate access to neighborhoods by emergency service vehicles or for other sufficient reasons. The street layout should serve the needs of the neighborhood and discourage use by through traffic. At the same time, the layout should provide appropriate vehicular and pedestrian connections between residential neighborhoods and shopping and employment areas.

The design of circulation systems in all new developments should be consistent with the recommendations of this Comprehensive Plan. Proposed new streets should provide for the appropriate extension of existing streets and key links to planned collector roads. The street layout should respect natural features, should relate appropriately to the topography and should be designed to facilitate drainage and storm water runoff.

The design of residential streets should reflect their function in the system hierarchy and discourage motorists from traveling above the intended speed. In particular, horizontal and vertical alignment should not be conducive to excess speed. Residential streets will be designed to manage the speed and volume of traffic in residential neighborhoods using traffic calming methods that encourage speeds of 25 mph or less. Lower order streets should be less than 1/3 mile in length, so that motorists will have no room to speed.

When required, parking lots should consist of heavily landscaped small lot segments that are unobtrusive. In commercial areas, parking should consist of ample on-street parking and small lots located to the side or rear of buildings and screened from the main commercial street. Access to parking should be provided from rear driveways where possible. All parking lots should be screened from adjacent residential uses. Minimum standards that address this design guidance should be included in the Millington Zoning Ordinance.

Appropriate facilities for bicycles should be provided at key commercial, civic and recreation locations. To ensure this, the Town Zoning and Subdivision codes should be amended to require non-residential uses to provide bicycle storage/parking facilities to encourage and support this alternative mode of travel.

WATER RESOURCE PROTECTION

Millington's objective for water resources are to:

1. Maintain and protect an adequate water supply to serve the residents of Millington through 2030;
2. Protect water supply from pollution and encroachment; and
3. Take steps to restore and protect water quality and contribute to meeting water quality regulatory requirements in rivers and streams in the Upper Chester River Watershed. This will require addressing current water quality impacts as well as future impacts from land development and population growth.

TMDLs for point and non-point loading should not be a significant constraint for future growth provided the Town implements strategies that hold source loadings at or below current levels. Managing land use in a way that benefits water resources requires assessing development regulations, policies and guidelines from a new perspective for the Town. Among other things, it requires minimizing the footprint of new development to the maximum extent possible, extensive use of water conservation measures, staging growth based on the availability and capacity of water resources, upgrading the WWTP to standards consistent with TMDL caps, protecting forested areas and natural buffers, retrofitting existing developed areas with improved stormwater management techniques, encouraging best practices in the management of public drainage ditches and requiring best management practices in all new development. In addition the Town should:

- Cooperate with Kent and Queen Anne’s County on watershed planning and management initiatives.
- Develop water conservation methods and policies and encourage innovative technologies for stormwater management such as bio-roofs (“green” roofs), bio-infiltration parking and traffic islands, and bio-retention gardens.
- Make education material available to Town residents regarding nutrient management to reduce fertilizer applications to grassed areas and lawns in Millington.
- Establish, maintain, or expand forest buffers in the form of linear wooded areas along rivers and streams to help filter nutrients, sediments and other pollutants in runoff.
- Work with the Upper Chester River Tributary Team, Maryland Department of Natural Resources (DNR), Chester River-Keeper, and the Counties to improve habitat and water quality in degraded streams in the Town with a stream restoration program. This effort should be undertaken in cooperation with the Upper Chester River Tributary Team and the Chester RIVERKEEPER Program. An on-the-ground review of streams and other waterways located within Town limits should be conducted to determine where stream quality is diminished or threatened. Streams in need of restoration typically are characterized by destabilized stream channels and eroded stream banks. A stream walk should be conducted as an annual event to ensure that restoration efforts are effective and to evaluate if additional measures may be required. This program would provide an excellent opportunity for public involvement in the Town’s conservation efforts. Residents, groups, and students can participate in stream restoration projects by “adopting” a stream or waterway and learning, then implementing, best management practices to protect streams and reduce pollutant loading in the Chesapeake Bay.
- Work with developers, homeowners associations and individual homeowners to reduce the amount of impervious cover in the Town by implementing techniques such as clustered houses, narrow streets, reduced pervious surface in parking lot areas, shared driveways, and pervious paving materials.

- Require new development and infill and redevelopment projects to treat stormwater using nonstructural and micro-scale practices to the maximum extent feasible. Techniques such as submerged gravel wetlands, rain water harvesting (cisterns and rain barrels), landscape infiltration, infiltration berms, and dry wells should become common practices. Stormwater should be filtered using such techniques as rain gardens, landscape and tree planters (e.g., linear tree pits, sidewalk planters), grass swales and bio-swales, tree-swales, grass filter strips and vegetated buffers.
- Encourage development design that maintains or enhances green infrastructure, and incorporates low impact design through stormwater management techniques for water quality and quantity management. The Town also should encourage LEED (Leadership in Energy and Environmental Design) technology to promote sustainable building practices, conserve energy, and improve water and air quality.

Specific actions the Town can take include the following:

- Limit impervious surface areas to 10% in the Conservation Area and other sensitive areas.
- Permit open section roadways in new developments.
- Incorporate the use of nonstructural best management practices (BMPs) such as natural conservation areas, roof and non-roof top disconnection, vegetated swales, sheet flow to buffer, reduced impervious cover to the maximum extent practicable and promote environmentally sensitive design (ESD) or low impact development (LID) techniques.
- Maintain existing forest cover and promote the enhancement of contiguous forest areas in the Conservation Area and the Critical Area Buffer.
- Continue to work with Kent County to address failing septic systems in areas that can be served by public water and sewer. Millington should maintain a listing of such septic systems that are provided public sewerage service to analyze and assess pollution reductions goals in relation to water quality improvements polices, measures, and programs.
- Amend road standards to allow narrower, shorter streets, rights-of-way, and sidewalks. Streets may be as narrow as 22 ft. in neighborhoods serving low traffic volumes; open space designs and clustering will reduce street lengths; rights-of-way can be reduced by minimizing sidewalk width, providing sidewalks on one side of the road, and reducing the border width between the street and sidewalks.
- Amend road standards to allow smaller radii for turn-arounds as low as 33 ft.; use a landscaped island in the center of the cul-de-sac and design these areas to treat stormwater runoff.
- Require grass channels or biofilters for residential street drainage and stormwater treatment wherever feasible.
- Interpret parking ratios as maximum number of spaces; permit shared parking arrangements; minimum parking stall width should be less than 9 ft. and stall length less than 18 ft.
- Require parking lots be landscaped. Relax setbacks to allow for bioretention islands or other stormwater practices in landscaped areas.
- Adopt flexible design criteria to allow developers to use clustered development/open space designs.
- Reduce minimum lots sizes.
- Relax setbacks and allow narrower frontages to reduce total road length; eliminate long driveways.

- Allow for shared driveways and alternative impervious surfaces.
- Require rooftop runoff be directed to pervious surfaces.
- Designate a minimum buffer width and provide mechanisms for long-term protection.
- Limit clearing, grading, and earth disturbance to that required to develop the lot.
- Promote the use of native plantings.
- Provide incentives for conserving natural areas through density compensation, property tax reduction, and flexibility in the design process.
- Implement policies and education programs that encourage the reduction of fertilizer applications to grassed areas lawns in urban areas.

Millington can achieve the Town’s water resource conservation objectives and make a positive contribution to improving water quality in the watershed by implementing urban BMPs such as those described above. Through its stormwater management ordinance and programs and development standards the Town should require environmental site design (ESD) techniques that optimize conservation of natural features (e.g., drainage patterns, soil, vegetation), minimize impervious surfaces (e.g., pavement, concrete channels, roofs), slow down runoff to maintain discharge timing and to increase infiltration and evapotranspiration and use other nonstructural practices or innovative technologies approved by MDE. Planning for water and wastewater facilities should reflect the need to conserve ground water resources and meet TMDL caps in the Upper Chester River watershed.

HERITAGE PRESERVATION

Implementation recommendations for heritage resources are designed to assist Millington in preserving its significant resources and developing broad strategies to enhance resources and promote compatible economic development initiatives that benefit the Town’s tax base.

PRESERVE HISTORIC RESOURCES

Consider ways to ensure that the Millington’s historic buildings and structures are maintained and preserved as valuable economic assets and important heritage resources. Develop planning policies and regulatory mechanisms, including Design Objectives or Guidelines, to assist in the preservation of heritage resources in Millington. This includes mapping, documenting, and inventorying of all current heritage resources as well as scenic and cultural landscapes and preparation of a “Millington Historic Preservation Plan”. The planning process should emphasize public awareness and education concerning Millington’s historic resources. Planning should be followed by establishment of a local historic district, historic district ordinance and historic district commission.

The Town can assist owners of historic properties by establishing mechanisms through partnerships to supply technical and professional assistance regarding heritage resources, including assistance to property owners for the rehabilitation and/or restoration of heritage structures in Millington. The Town also may encourage the protection and rehabilitation of historic homes and buildings by evaluating the use of an “Enterprise Fund” and “Rehabilitation Tax Incentives,” working with the Maryland Department

of Housing and Community Development, the Maryland Historical Trust, and the National Trust for Historic Preservation to obtain financial support for rehabilitation.

PROMOTE HERITAGE TOURISM

Continue to build heritage tourism infrastructure in Millington. This includes improved walkable spaces in the downtown, wayfinding signage that includes historic sites and structures, a kiosk for information regarding historic Millington, parks and open spaces to accent the public realm, and linkages to key sites and areas such as greenways and trails etc. Increased heritage tourism will assist in the revitalization of the Town's central business district. Specialty shops and a vibrant downtown with businesses, restaurants, inns etc. will improve Millington's local economy and assist in the preservation of its valuable historic resources.

Partner with local and State entities such as the Eastern Shore Heritage Incorporated (ESHI), Kent County Government, the Kent County Historical Society, the Queen Anne's County Historical Society, the Maryland Historical Trust, and the Maryland Heritage Areas Authority to promote and enhance heritage preservation and tourism initiatives in Millington.

Promote Millington as an important scenic byway in Kent County. This includes partnering with Kent County, Maryland Tourism, and the Maryland State Department of Transportation (MDOT) – State Highway Administration (SHA) to review the possibility of including Millington (MD Rt. 313 from Galena to Millington) as a branch on the Chesapeake Country Scenic Byway.

ADAPTIVE REUSE OF HISTORIC STRUCTURES

Adopt flexible zoning provisions that promote the adaptive reuse of historic structures for public and private uses including, but not limited to, bed and breakfast establishments, craft/gift shops, small retail operations, cafes and restaurants, museums, and studio space for artisans, when such uses minimize exterior structural alterations.

ADMINISTRATION & ENFORCEMENT

STREAMLINING THE DEVELOPMENT REVIEW PROCESS

Development review of infill and redevelopment projects within the old Town portions of Millington will be streamlined by amending the Zoning Ordinance to give the Planning Commission greater authority to vary certain development standards for proposed projects that meet voluntary design guidelines.

INNOVATIVE DEVELOPMENT TECHNIQUES

Amendments to the Zoning Ordinance will add special provisions for master planned unit developments. The standards and guidelines will establish a development and design framework for mixed-use projects, including commercial and business uses appropriate to a neighborhood context. The process

will include a requirement that a “Developer Rights and Responsibilities Agreement” (DRRA) is executed as part of the zoning approval process.

PARKS & OPEN SPACE

Parks will range from small, vest-pocket parks located within the neighborhoods to larger community parks serving all Town residents, as deemed appropriate. Parks and open space meeting the following guidelines should be provided for enjoyment by people of all ages.

- Serve the active and passive recreation needs of all Town residents;
- Be located within easy walking distance (500 feet to 800 feet) of every residence;
- Be linked together by walking paths to the maximum extent possible;
- Be highly visible; ideally, fronted on at least two sides by residential units so that residents can clearly see park activities; and
- Respond to changing user needs.

The Town should adopt minimum open space and improvement standards in the Zoning and Subdivision regulations and require that the design and location of park and open space adhere to these guidelines. New developments will be required to provide a variety of park and open space facilities to address the needs of the new neighborhoods, or, in cases where park or open space land is already in the neighborhood, contribute a fee in lieu of participation. It is important to note that the Town has achieved the State recognized goal of 30 acres of open space and recreation land per 1,000 people.

GROWTH MANAGEMENT

ANNEXATION

Millington’s long range growth plan identifies land outside of the corporate boundaries that is planned for annexation in the future. Future annexations must address State laws contained in Article 23A and the additional requirements from Maryland House Bill 1141. Although these properties are not needed to meet the Town’s projected growth-related land demand to 2030 neither does the Town want them inefficiently developed as low density, rural subdivisions on well and septic under County zoning.

The long-term development policy for Millington embraces the “Eight Visions” that comprise the State’s Economic Growth, Resource Protection, and Planning Policy. Future development will be in accordance with the principles of Smart Growth. Consequently, the substantial residential development expected in the future should be consistent with the density requirements of the State’s Priority Funding Areas and the principles of Smart Growth in general. This development will be planned in a manner that makes efficient use of the land. Runoff and other negative impacts will be minimized.

As of October 1, 2009, all annexations must be consistent with the Town’s MGE. In addition to meeting all State legal requirements, future annexation will include a detailed “Annexation Agreement” between landowner(s) and the Town that addresses the following;

1. Identification of potential impacts to community facilities and services including water and sewer as well as environmentally sensitive areas. Appropriate impact studies may be required to quantify these impacts, including a fiscal impact study and an environmental impact assessment that addresses the potential impact of the proposed annexation and planned development on the environment of the site and surrounding area (if necessary, applicants for annexation shall pay the cost of completing all studies related to expanding capacity in existing public facilities and/or services);
2. Identification of development funding responsibilities (i.e., the costs of providing roads, utilities, parks, other community services) between identified parties;
3. Outline of issues and specific conditions to be addressed in a Developers Rights and Responsibility Agreement (DRRA); and
4. Requirement of development form to be consistent with the recommendations of the Comprehensive Plan, i.e., compact development meeting smart growth density targets.

CAPITAL IMPROVEMENT PROGRAM

Preparing a Capital Improvement Program-CIP, conducting regular infrastructure studies (including water and sewer plan updates) and reviewing impact fee structure are critical to ensuring that the Town has adequate public services and facilities in place to meet future demand. These updates are particularly important prior to the annexation of any new land outside current corporate boundaries.

Millington should prepare a Capital Improvement Program (CIP) that establishes a timeline for expanding or enhancing infrastructure and public services. The CIP should identify capital projects, the timeframe for construction, and funding strategies. The CIP should be updated every five years and be flexible enough to allow for changing needs as circumstances dictate.

Millington should work with Kent County (and Queen Anne's County, where appropriate) in developing the Town's CIP to insure coordination of long term infrastructure needs and facilities planning. The 2006 Kent County Comprehensive Plan identifies the development of a proactive County Capital Improvement Program as a key implementation strategy for the County to coordinate future development with the provision of infrastructure. This will be particularly important to Millington when the County considers expansion of public schools, emergency services, library facilities, and park and recreation land and programs, as Millington's population increase will impact all of these systems to some degree.

ADEQUATE PUBLIC FACILITIES ORDINANCE (APFO)

The Municipal Growth Element indicates that build out within the Town will outstrip the existing capacity of Town water and sewer facilities and will impact other services and facilities including public schools, park and recreation facilities, and emergency services. Millington will need to ensure that new or expanded facilities are in place when needed. To ensure appropriate timing between the demand for facilities and/or services and supply, the Town may consider adopting an APFO.

An APFO establishes minimum level of service criteria for services and facilities provided by the Town. When a proposed development will diminish the level of service provided, or exceed the capacity of a particular facility, the Town will not grant approval unless and until the service of facility is improved so as to maintain the level of service standard. Adopting an APFO requires setting level of service standards for each facility or service.

INTER-JURISDICTIONAL COORDINATION

The *Millington Comprehensive Plan*, Municipal Growth element, indicates the need for strong inter-jurisdictional coordination with Kent and Queen Anne’s Counties. Ensuring adequate public facilities and services at both levels of government, as well as implementing water and natural resource conservation strategies will require cooperation between the Town and Kent and Queen Anne’s County.

The planning requirements from Maryland House Bill 1141 direct the Town and both County Planning Commissions to meet and discuss this Comprehensive Plan prior to adoption. At a minimum, an agenda for such a joint County/Town meeting should include how best to coordinate the following:

- Cooperative watershed planning initiatives for the watershed;
- Coordinated policies concerning county land uses adjacent to the Town;
- Coordinated policies concerning conservation of green infrastructure; and
- Funding for public facilities and services, i.e., adequate public facilities, impact fees, excise taxes.

Effective mechanisms for County/Town dialogue, coordination, and agreement are needed. Acceptable coordinated strategies should be formalized in ways that bind each participant. Forums for on-going coordination and cooperation include the Council of Governments (COG) for Kent and Queen Anne’s Counties, sanitary districts, joint steering committees (for example for watershed planning initiatives) and others. Examples of potential formal mechanisms for recording joint policies include a Memorandum of Understanding (MOU) and/or an Inter-Governmental Agreement (IGA). Millington officials should be fully engaged with the existing COG for each County and ensure that the following topics are addressed:

- Placement and location of Priority Funding Areas (PFAs) around the Town;
- Coordinated watershed and environmental planning initiatives; and
- Coordinated growth and development strategies.

HOUSING

While median housing values in Millington are encouragingly affordable, the condition of the Town’s housing stock may be a deterrent to potential buyers and renters. As discussed in the Housing element of this Plan, half the Town’s housing units were built in 1939 or earlier; three-quarters of the Town’s homes are over 45 years old. While many of the Town’s older residences appear to be in good condition and show signs of restoration or renovation, there are also a number of homes that show signs of neglect and that are in need of repair and maintenance. This is apparent in some of the rental

properties located in the downtown area. In some cases overcrowding also may be an issue, which can lead to greater wear and tear on housing units.

The Town's high rent costs (relative to the area), combined with the lack of quality housing units result in a potential lack of housing options in the Town, particularly in rental housing. Rental housing is often the only housing option available to young families and low-income residents.

While there is new housing development taking place in Millington, special consideration needs to be given to how to maintain existing homes so that they do not fall into decline. This includes not only the condition of the homes themselves, but also the yards and neighborhoods around them.

In addition to the condition of the existing housing stock, attention should be paid to the types of houses available in the Town both now and in the future. The 2006 Kent County Comprehensive Plan predicts that by the year 2020, one out of five Kent County residents will be over 65 years old. As Millington's population continues to age, this segment of the population will need to be considered in any planning for new residential development to insure that new housing is suitable to the needs of the elderly. In addition to smaller houses on smaller lots, options such as condominiums, senior citizen apartments and assisted living facilities should be made available. Millington needs to address these issues if it wants to keep residents and attract new ones.

HOUSING PROGRAMS & RESOURCES

There are many Federal and State programs designed to address a variety of components of the housing issue. In addition, profit and non-profit organization may be underutilized resources in the community and/or offer opportunities for partnerships. Some actions the Town can consider include:

- Coordinate with the *Kent County Housing Improvement Program*, which has repaired several houses in Millington. Combined Kent County and Millington efforts can greatly assist efforts to address affordable housing and quality rehabilitation.
- Form a Housing Roundtable, a coalition of community organizations, local government representatives, private business owners (including builders and developers), and individuals who assess and recommend housing policies for the Town.
- Explore avenues to significantly address better housing options, including:
 - developing zoning and design standards that increase the mix of uses and housing types;
 - employer-assisted housing;
 - creating housing trust funds solely to build affordable homes in low, moderate and middle income brackets;
 - forging partnerships with nonprofit, semi-public developers and other financiers of affordable housing.

- Contact the Maryland Department of Housing and Community Development (DHCD) to investigate opportunities for Millington to participate in affordable housing program partnerships with the State. The Governor’s Affordable Housing Subcommittee, working with the DHCD, made primary recommendations for State affordable housing programs in 2004, including:
 - Link workforce housing needs with local job creation/economic development strategies and projects;
 - Maintain and increase resources for affordable housing (multi-family and single-family) through a dedicated revenue stream (Federal, State, local, private, foundations);
 - Consider a pilot program of funding for housing units targeted to households between 60% and 100% of Area Median Income;
 - Encourage, develop and fund educations programs including financial literacy, credit counseling and homeownership counseling.

GENERAL RECOMMENDATIONS

- Review the Town’s regulatory policies and correct regulations or requirements that do not sufficiently describe or enforce maintenance standards and occupancy limits for housing units. Possible changes may include increasing housing inspections from alternating years to an annual or twice annual schedule, which may necessitate the hiring of an additional part-time Town staff person.
- Consider the appointment of a Housing Commission to undertake regular inspections of housing conditions and oversee enforcement of housing regulations.
- Work with owners of older or dilapidated buildings to explore options for rehabilitation or redevelopment projects.
- In cases where cooperation from a property owner is not given, consider using Town authority to clean up a property and assess the costs to the property owner.
- Review the Town’s regulatory policies to insure they will support and not conflict with efforts to provide suitable housing choices for the elderly. This should include updating the Zoning Ordinance to accommodate special needs housing, including continuing care and assisted living facilities.
- Consider adopting a Town inclusionary zoning ordinance that requires a portion of housing units in a new development be reserved for affordable housing for low income families and seniors. As appropriate coordinate this program with Kent and Queen Anne’s Counties.
- Maximize density in development or redevelopment projects where appropriate. This means permitting townhouse and multi-family units in the mix of residential units in a project.
- Implement public water and sewer projects that enable higher-density residential development and mixed-use neighborhoods in designated growth areas and encourage a mix of housing densities and types in new subdivisions through Planned Unit Development provisions.
- Work with property owners of vacant lots to have them cleaned up or prepared for development. Seek out the assistance of local business groups, individuals and community organizations, schools and youth to help reduce the cost to the property owner when appropriate or in strategic areas.
- Allow for garage apartments and other kinds of secondary or accessory apartment units to increase the supply of affordable rental housing. Accessory apartments, in-law apartments and “granny flats” offer Millington an opportunity to make adaptations to some single-family neighborhoods to accommodate

changing housing needs. With the trend toward larger numbers of one- and two-person households, accessory apartments provide opportunities for Town residents to make their housing available to the community at-large, including young couples, individuals, and senior citizens. Although likely dependent on the availability of public wastewater treatment facilities, this particular housing option offers a number of benefits including the following:

- Create new living units without the expense of new infrastructure,
- Generate a flow of new dollars within the community from home equity,
- Reduce the costs of medical care for the elderly who can receive less-expensive, in-home care services while living in an accessory apartment rather than being forced to move to a more costly nursing home or long-term health care facility,
- Provides older homeowners with an opportunity to generate some additional income,
- Increases the supply of low- and modest-cost rental housing,
- Provides young singles, couples and single parents with another source of income. This option may allow them to buy into the housing market; maintain ownership of their present home; or make available modest-priced rental housing in neighborhoods which provide a wholesome environment for children,
- Modestly increases economic activity in the private sector, which benefits commercial lenders, real estate agents, builders and retail businesses
- Results in small increases in property appraisals, which generate modest amounts of additional tax revenues,
- For older homeowners, the addition of a tenant creates an opportunity to continue to live in one's own home and maintain contact with the neighborhood,
- Tenants may add a measure of security and alleviate the fear of break-ins,
- Tenants may provide companionship, particularly for the elderly, and
- Tenants may be willing to provide personal services in lieu of rent. This could include the performance of routine maintenance work around the house; maintaining the yard; shoveling snow; performing light housekeeping tasks; providing modest, personal in-home health services; and providing occasional transportation.

To prevent the occurrence of inappropriate or unsafe conversions to accessory apartments, the Town should consider incorporating refinements and safeguards into any code provisions permitting conversion to accessory apartments. Such refinements may include any of the following:

- Restricting the conversion option to senior citizens over a specified age.
- Requiring the homeowner to reside in one of the living units within the house.
- Restricting the conversion to homes which were constructed prior to a given date.
- Requiring a minimum square footage as a prerequisite for a house to be considered eligible for a conversion.
- Specifying the particular zoning classifications where conversions may be considered eligible.
- Permitting conversions only by homeowners who have resided in the home for a designated number of years prior to making an application for a conversion.
- Prohibiting exterior modifications to the house.

- Specifying minimum or maximum floor sizes for accessory apartments requiring that a conversion not exceed a designated percentage of the total floor space of the house. Typically such floor areas required in ordinances establish a minimum of 400 to 500 square feet in size to a maximum of 900 to 1,100 square feet.
- Placing a limit on the number of people who can occupy the accessory apartment or designating the aggregate number of people who can occupy the entire house.
- Encouraging barrier-free design considerations for persons with handicaps or limited mobility.

From a public policy perspective, accessory apartments provide an alternative to the popular "add-on" strategy of continually relying upon new construction (houses, streets, sewers, utilities and public services) to satisfy the needs of a growing community. They concentrate on preserving, refurbishing and making more efficient use of existing housing and the expensive community infrastructure, which is not maximized.
